

Birthday bounces

Lanora and Gabriel Gardner of Twin Falls enjoy a bounce on a trampoline they recently received for their birthday. The couple of sisters have birthdays a week apart.

Strike may slow down air traffic

WASHINGTON (UPI) — The Federal Aviation Administration and the union representing air traffic controllers broke off contract talks Wednesday, heightening chances of a strike Monday.

A strike could sharply curtail air transportation.

The government immediately said it will do all in its power to end any walkout by controllers and arrest strikers as a last resort.

The Professional Air Traffic Controllers Organization, representing 15,000 of the nation's 17,000 controllers, rejected an offer presented by the FAA and left the bargaining table. No new talks were scheduled.

Transportation Secretary Drew Lewis promptly held a news conference and warned: "The administration is going to take a very strong stand. We're not going to tolerate an illegal strike."

Federal employees are barred from striking, but the union set a June 22 strike deadline last month.

A walkout could take out as much as 85 percent of the workforce, but the FAA has worked out plans to serve about half of the normal commercial traffic and perhaps 25 percent of traffic overall. Most flights under 500 miles would be grounded.

Lewis, whose agency oversees the FAA, said the \$40 million package offered increased pay for controllers giving on-the-job training or performing night duty. He said the FAA promised to seek a congressional exemption from the current \$50.112 pay ceiling for federal employees to accommodate the premium pay.

Asked if strikers might ultimately face arrest, Lewis said, "We have no desire to put traffic controllers around this country in jail any more than they have a desire to go to jail."

But if there is no agreement, he said, "We are prepared to go to that extent if we have to do so, in terms of arresting these people and holding them under the criminal code."

Later, department general counsel John Fowler suggested arrests would be a last step. "I think it would be a long time before the federal government put its own employees in jail."

PATCO's Marcia Feldman said Wednesday the FAA's offer "doesn't begin to deal with our concerns. It does touch on pay, but only for a few people. It isn't the kind of broad relief our people are seeking."

PATCO wants the FAA to endorse a bill in Congress calling for top annual pay of \$73,420 and a 32-hour work week.

Bill aims to uphold traditional family role

WASHINGTON (UPI) — Three Republicans asked Congress Wednesday to "uphold the American family" by barring the federal government from interfering with spouse abuse, spanking children or the historic role of women as mother and homemaker.

The 1981 Family Protection Bill, introduced by Sen. Roger Jepsen of Iowa, also would promote prayer in schools and give a tax break to households with newborn children of elderly members.

Sen. Paul Laxalt of Nevada and Rep. Albert Lee Smith Jr. of Alabama co-sponsored the bill which, Jepsen said, embodies the values of the family that have existed since the time of Aristotle.

A similar bill died in committee during the last session of Congress but the sponsors of the 1981 act said they hoped for action in the current session because of Laxalt's close relations with President Reagan.

Laxalt, who served as Reagan's campaign manager, told a breakfast news conference in the Capitol that although he had not discussed the bill with Reagan, he knew the president stood for its objectives.

"I would hope, conceptually, we would have the support of the administration," Laxalt said. The fact that Laxalt is close to the president "should send a message to somebody," Jepsen said.

Jepsen replied vigorously when a reporter asked what the "historical" role of women was.

"We should appreciate the role of women as mother and homemaker," which has been "rather downplayed and ridiculed," he said. "Nothing is more beautiful than a mother."

"It is important to uphold the family," Smith said, or "our nation will crumble."

The bill, which has more than 30 subsections:

- Reinforces the responsibility and legal rights of parents to direct the religious and moral upbringing of their children.
- Restricts the federal government from preempting or interfering with state laws pertaining to child abuse and revises the definition of child abuse to exclude corporal punishment.
- Restricts the federal government from preempting or interfering with state laws pertaining to spouse abuse or domestic relations.
- Prohibits the Legal Services Corp. from using any funds for cases involving abortion, divorce, homosexual rights or busing to achieve racial desegregation.
- Prevents federal funds from being used to promote educational material that denigrates the role of women as it has been historically understood.
- Provides that no federal funds may be used to provide a contraceptive, an abortion or venereal disease treatment to a minor unless the parents are notified.

It gives authority for deciding on whether there should be "sex-intermingling" in sports and other activities back to the local schools.

Its tax provisions would allow relatives to deposit up to \$2,500 tax exempt a year for a child's education, give married couples an additional \$1,000 tax exemption for the year a child is born or adopted, allow a tax credit of \$250 or tax exemption of \$1,000 for each household which, in current law, allows a tax credit of \$1,000 for each child under 18 years old.

Selective abortion of twin

Surgeons abort Down's Syndrome victim; sibling lives

BOSTON (UPI) — Doctors pierced the heart of a fetus suffering a genetic condition certain to cripple it mentally and physically, aborting it and allowing its healthy twin to be born normally, it was reported Wednesday.

It was the first time the risky procedure has been used in the United States and only the third time it has been attempted in the world, doctors at Mount Sinai Medical Center in New York City reported in the New England Journal of Medicine.

The mother, 30, who had never had children before, was infertile for 18 months before the pregnancy. The procedure was carried out with the permission of the New York State Supreme Court.

Tests at the 17-week mark of her pregnancy showed that one of the twins had Down's Syndrome, or mongolism, which causes moderate to extreme mental retardation and physical abnormalities. Most of its victims must be institutionalized at one time or another.

"The mother desperately wanted to have the normal child but face the fact of caring for an abnormal child for the rest of her life," wrote Dr. Thomas D. Kerensky.

Guided by ultrasound, doctors pierced the heart of the abnormal twin with a needle at 20 weeks and withdrew blood, causing cardiac arrest. The procedure has been used before only in single pregnancies.

As the normal twin continued to develop, the other died and began to shrink in an "almost mirror-like regression." The dead fetus was delivered a short time after birth of a normal boy.

"After delivery, the conditions of the mother and baby were stable, and now, seven months later, they continue to do well," said Kerensky, acting chief of obstetrics at Mount Sinai.

The woman had undergone amniocentesis, in which fluid from the sacs enclosing each twin was sampled and tested genetically, at the 17-week mark of her pregnancy.

When informed one of the twins had Down's Syndrome and could be "severely retarded," the parents had to decide between what seemed to be the only options available: abort both fetuses, or carry both to term, Kerensky reported.

"Having been made aware of the case report from Sweden in which selective termination of an abnormal twin had been successfully performed even though the unaffected twin was delivered prematurely, she (the mother) asked if a similar procedure could be offered to her," the physician said.

The risks included performing the abortion on the wrong fetus, since there was no definite way to distinguish between the two during the procedure. It was also possible the abnormal fetus could have been injured but not aborted.

Another risk was that coagulated blood from the dead fetus could enter the mother's bloodstream, a complication that could cause brain damage in the other twin.

Court decision bolsters job hazard protection

WASHINGTON (UPI) — In a blow to President Reagan's drive to curb regulation, the Supreme Court Wednesday gave federal regulators rein to protect workers from on-the-job hazards.

Rejecting an administration plea not to decide the issue now, the court declared that such rules do not have to balance the benefits to workers' health against the cost to employers.

Justice William Brennan, writing for the court, said Congress had already decided health is "above all other considerations."

Turning aside a cotton industry request that it order "cost-benefit analysis" for safety rules, the court said lawmakers believe the expense of meeting the standards is "part of the cost of doing business."

But, splitting 5-3, the court majority said such standards must undergo "feasibility analysis" to see that the regulation "most adequately assures... that no employee will suffer material impairment of health, limited only by the extent to which this is capable of being done."

The embattled Occupational Safety and Health Administration — often a whipping boy in Reagan's campaign against federal meddling in business matters — in 1978 proposed stringent controls on worker exposure to airborne cotton dust. The dust can cause the sometimes fatal "brown lung" disease, byssinosis.

AFI-CIO Secretary-Treasurer Thomas Donahue told a news conference the ruling "repudiates the efforts of the Reagan administration to block a Supreme Court decision and to water down the act."

"For the thousands of victims already suffering from byssinosis, the decision is probably too late," he said. "But for the half-million active textile workers, it comes not a minute too soon."

Thorne G. Auchter, assistant Labor secretary for OSHA, said, "This decision achieves a major goal — that is, it maintains the cotton dust standard in effect, protecting textile workers."

But he noted, "The court suggested that the agency may be required to use cost effectiveness studies" to determine how to protect workers. He said the ruling will be considered as the Labor Department continues its review of OSHA health and safety standards.

Personal income up, but so is inflation

WASHINGTON (UPI) — The personal income of Americans continued to grow slowly in May, barely keeping up with inflation, the Commerce Department reported Wednesday.

Personal income rose by \$13.7 billion, or 0.6 percent, to a seasonally adjusted annual rate of \$2,367.2 billion — or more than \$2 trillion — the department said.

That's an average income of \$8,838 per person.

The monthly rise was much smaller than those in the year's early months. There were increases of \$24 billion in January, \$17 billion in February and \$22 billion in March.

The May increase was small enough so that even though inflation has come down sharply from early in the year — incomes in May were barely keeping pace with inflation.

"This gain in income represents little or no real increase for the third month in a row," said William Cox, acting chief economist of the Commerce Department.

The assessment is an estimate, since May's inflation figures have not been completed yet. But the same percentage increase in incomes in April produced virtually no real gain that month, even though inflation was then half its rate of last year.

The Consumer Price Index grew at an annual rate of 5 percent in April, compared to 10 percent for the previous 12 months. Inflation in May is expected to be roughly the same or slightly higher than April's.

"We've had for some months, since March, exceptionally slow income gains, especially in real terms," said Sandra Shaber, economist with Chase Econometrics near Philadelphia. "Even with lower inflation numbers the gains are very slow in real terms."

The income figures were consistent with other recent reports that show the economy in a lull — in general, said Cox, "it looks like slow growth at best for the immediate future."

Americans stepped up their purchases of consumer goods by \$12 billion, or 0.7 percent, the May figures showed. That was a shade faster than their increase in June.

As a result, personal saving declined by about \$2 billion, or 2.1 percent in May. Americans now save about 5 percent of their after-tax income, lower than most industrial countries.

A woman hostage runs from a Rochester, N.Y., bank after the gunman had been killed

Shooting spree ends at bank

ROCHESTER, N.Y. (UPI) — A Vietnam veteran who pleaded with police to execute him killed three people — including his mother — and wounded seven others Wednesday in a wild, three-hour shooting rampage.

The ordeal ended in a bank where he was shot and killed by police after taking eight people hostage. The gunman killed one of the hostages and wounded two policemen, one critically.

Police identified the gunman as William Griffin, 37, of Rochester, and said he forced the bank manager to call various police agencies and read an "irrational" typewritten note he carried with him into the bank.

Police Chief Delmar Leach said the note was read at 1:30 p.m. by the Security Trust Bank manager, Ernest Lofton Jr., promising to call a hostage within 30 minutes if police had not "executed" him by that time.

At 2 p.m., he followed through with his promise, pumping two shotgun shells into the back of bank teller Margaret Moore, 30. The force of this shot from a pump-action shotgun was so intense it propelled the

woman from the foyer through the side door of the bank.

A special weapons officer, poised in the window of a church across the street, then fired a single shot that struck Griffin in the head and killed him.

The remaining seven bank employees raced out into the street and police swarmed in on the stricken gunman.

Leach said Griffin had no criminal record in Rochester. Neighbors said he was a Vietnam war veteran who was "never quite the same" since his return.

Leach said the three-hour fusillade began at Griffin's home on the city's southwest side at about 11:30 a.m. when Griffin, armed with a shotgun, shot and killed his mother, Gray Anderson, wounded his stepfather, Amos Anderson, and killed a man who was hanging wallpaper, Thomas Carola, 64.

Griffin then ran outside, still brandishing his shotgun, and headed for the bank two blocks away, firing shots along the way.

Prince Charles greeted by hecklers in NY

NEW YORK (UPI) — Britain's Prince Charles attended a gala performance of the Royal Ballet Wednesday night that was disrupted by hecklers.

Protesters accused him of "murdering the Irish" and denounced him as the "Prince of Death."

First Lady Nancy Reagan sat with the 32-year-old soon-to-be married heir to the British throne in the exclusive "diamond horseshoe" of the

Metropolitan Opera House at Lincoln Center.

Four hecklers were subdued by Secret Service agents for shouting anti-British slogans during a performance of "Sleeping Beauty" and arrested on charges of disorderly conduct.

Outside, 5,000 protesters in a park across the street from the Manhattan arts complex shouted "The Prince of Death must go." They hoisted a

golden coffin symbolizing four dead Irish hunger strikers as the prince was whisked by limousine into the center.

They later hurled eggs from behind banners stretched between trees at a long line of limousines that stood by to pick up those in the audience. Women in long evening gowns and men in tuxedos ran for cover as police on horseback guided the limousines down ramps away from the protest.

Winds continued to be quite brisk and hazy through the southern valley areas Wednesday. Speeds of 15 to 25 mph were quite common, while gusts to slightly over 30 mph were recorded. Strongest winds were in Magic Valley and eastward.

Rainfall was spotty in southern Idaho, but elsewhere, Pierce had 1.53 inch and Ponn station and Powell both had 1.15, and Elk City .89.

Conditions for cultivation and other outside work is expected to

be good through Monday. Drying of hay may be interrupted by showers today, but drying conditions will be generally good into the first part of next week. Plant growth rates will increase as temperatures warm to near normal over the weekend. Pan evaporation will be 25 Thursday and Friday.

Spraying conditions will become fair to good this morning as winds decrease to 5 to 12 mph. Winds will increase this afternoon to 8 to 18 mph.

Work resumes in coal mines

WASHINGTON (UPI) — United Mine Workers leaders Wednesday overwhelmingly approved a tentative contract for mine construction workers, as many soft coal mines resumed production for the first time in nearly three months.

UMW Secretary-Treasurer Willard Esselstyn, chief negotiator on the mine construction agreement, predicted the "mass, mass majority" of mines would be back in operation Thursday as construction worker picketing stopped.

The union's bargaining council set the 40-month agreement to the coal fields for rank-and-file ratification on a 30-4 vote.

Soft coal mines in Appalachia and the Midwest began moving toward full-scale operations during the day as word of the agreement and council approval reached the 11,000 construction workers whose pickets had prevented many of the UMW's 160,000

miners, who ended their own strike 11 days ago, from returning to work. Esselstyn said a rank-and-file vote on ratification of the mine construction agreement would occur next Wednesday, but he added he would not go into the coal fields to explain the agreement as UMW President Sam Church Jr. had done with the miners' agreement.

"As far as people going into the field — doing a rubber chicken circuit on the thing — no, I was not going to do it then and I'm still not going to do it," Esselstyn told a news conference.

"This contract, I think is a good contract, the best contract that we could get at this point in time, and I feel as though ... the rank and file can vote 'er up or vote 'er down," he said. "I believe the contract will pass and I am not going to go into the field."

The agreement includes increases in wages and benefits totaling 38.5 percent over the near 40-month term,

which will expire at the same time as the major soft coal agreement.

Among major gains are equalization of pay scale for workers on shafts and slopes with those doing surface construction work, and a prohibition against employers subcontracting work out in an effort to discipline UMW employees for engaging in union activity.

An end to the picketing — which came slowly in parts of Pennsylvania, northern West Virginia, Ohio and western Kentucky — meant the industry could begin gearing up to full production for the first time since the soft coal strike began March 27.

A spokesman for the West Virginia Coal Association said most mines in southern West Virginia, where a large segment of the UMW workforce is concentrated, resumed production Wednesday. No picketing was reported in eastern Kentucky's coalfields.

Auto workers return to AFL-CIO

WASHINGTON (UPI) — The AFL-CIO Executive Council voted unanimously Wednesday to bring the 1.2 million-member United Auto Workers union back into its "House of Labor."

The move ends a bitter dispute that lasted more than a decade. When the council acted, by telegram ballot, takes effect July 1, it will boost the AFL-CIO membership to nearly 15 million and bring an additional \$2.5 million a year in dues to the federation.

It will also give the AFL-CIO more clout on Capitol Hill and in political circles.

Notice of the formal re-affiliation was made in a letter by AFL-CIO President Lane Kirkland to UAW President Douglas Fraser, released by the federation.

It ended a personal, political and philosophical break that occurred in 1968 when the late Walter Reuther led the UAW out of the AFL-CIO, then headed by the late George Meany.

In his letter to Fraser, Kirkland expressed his personal appreciation to the UAW president and his executive board for their leadership in pushing the re-affiliation effort.

"I am confident that both the AFL-CIO and the UAW will be strengthened and thus able to do a better job of representing the interests of America's working men and women," Kirkland added.

While the UAW will increase significantly the AFL-CIO membership, it also might bar re-affiliation of the 2-million member Teamsters union, whose new president, Roy L.

Williams, is under federal indictment for allegedly attempting to bribe a senator in return for favorable action on trucking deregulation legislation.

Fraser — has spoken out — against Williams, who also has alleged ties with organized crime figures, and has said publicly that Williams could not be elected to even a local office in the UAW.

The UAW president has indicated he would fight for a review of alleged corruption within the Teamsters union before allowing it to rejoin the federation.

AFL-CIO Secretary-Treasurer Thomas Donahue said any move to place Fraser on the 35-member executive council would come at a later date.

Polish sailors seek asylum

ASTORIA, Ore. (UPI) — Two Polish navigator trainees left their ship, Kapitlan Ledochowski, Wednesday while it was in port for fuel and water and requested political asylum in the United States.

U.S. Immigration and Naturalization Service agents took the two, Romald Polkowski, 25, of Szczerzyn, and Tomasz Nawalny, 24,

Lupburan, to Portland, where they were debriefed and their asylum requests being studied.

The sailors had contacted the U.S. Coast Guard station at Astoria at 4:30 a.m. after leaving the ship, which is the supply vessel for a Polish fishing fleet working off the Oregon Coast. Coast Guard crewmen took the two into protective custody until immigration agents arrived.

Iran prepares for Bani-Sadr's ouster

ANKARA, Turkey (UPI) — Iran's Parliament approved a procedural bill Wednesday to open the way for the moderate President Abolhasan Bani-Sadr's impeachment and ouster.

The Council of Guardians, the Islamic body that rules on the legality of laws, sent a letter to the Majlis, the parliament, saying the bill was constitutional. Tehran Radio reported.

Ayatollah Mohammad-Beheshti, chief justice of the supreme court and the president's arch rival, said

Bani-Sadr "put himself into this situation because he would not follow the nation's demand for the establishment of an Islamic system, in accordance with the law and constitution," according to the radio.

Beheshti, head of the hard-line Islamic Republican Party, also said in a news conference that a three-member mediating commission had been formed. Bani-Sadr is to be an "adviser," but he said there was no now any question of his arrest.

Today's weather

Cloudy with slight chance of showers today

Twin Falls, Burley-Rupert, and Gooding-Jerome areas:

Becoming cloudy today and tonight with a slight chance of showers. Decreasing clouds Friday.

Southerly winds today 10 to 20 mph, shifting to westerly by evening. Lows 45 to 55 tonight, highs 70 to 80. Both days: Pollen counts for Wednesday was 114 per cubic foot of air.

Hatley, Camas Prairie, and Wood River Valley:

Increasing clouds today and tonight with a chance of light showers. Clouds and showers decreasing Friday. Lows 35 to 40 tonight, and highs both days 65 to 70.

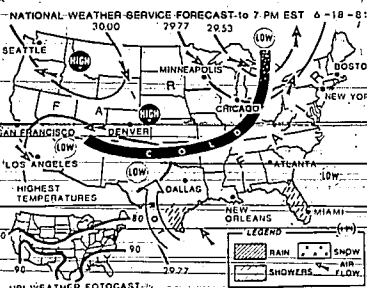

Northern Nevada and northern Utah:

Utah indicates a warming trend today and Friday, while north Nevada calls for occasional high clouds, otherwise sunny and warm both days.

Synopsis:

High pressure built over Idaho from the west Wednesday. As a result, clouds were thinning out and clearing off. However, in the northern part of the state clouds and some showers continued.

Another weather disturbance is moving rapidly across the Pacific, which should spread clouds and some showers or thundershowers into the state by this afternoon.

Coming Sunday

Plea bargaining.

What's it worth?

The criminal court calendar in the Twin Falls County Prosecutor's office looks pretty crowded some days.

If plea negotiations were reduced, there would be more cases going on trial, more crowding and more court expenses.

But police officials complain that too many of their cases are plea bargained away.

Prosecuting crime is expensive. But sometimes whether a suspect is tried or not comes down to a question of dollars and cents. Now, many law enforcement officials are asking, "What's it worth?"

Read a special Times-News series beginning Sunday.

The Times-News

"It's a great way to start your day"

U.S. says Iraqi nuclear weapons in future

WASHINGTON (UPI) — The administration acknowledged Wednesday Iraq is seeking a nuclear weapons capability but disagreed Iraq was on the verge of building an atomic bomb.

"We don't agree with that position of Israel," Undersecretary of State Walter Stoeessel said at a joint hearing of two House foreign-affairs subcommittees, about Israel's claim that its raid on Baghdad was necessary because of the nuclear weapon.

Stoeessel stressed the administration is in no hurry to decide whether Israel's June 7 raid was defensive, as it claims, or offensive and thus a violation of arms sales agreements with the United States.

"We don't want to be rushing into a decision," he said.

Stoeessel said Washington "cannot be but dismayed" by the raid's damage to "Middle East peace efforts," including complicating the mission of U.S. special envoy Philip Habib and "embarrassing" Egyptian President Anwar Sadat.

The administration believes Israel "had not exhausted all diplomatic options" before launching the raid, with American-made fighters that destroyed the Iraqi reactor, he said.

But Stoeessel balanced his criticisms of Israel by noting that Iraq condones international terrorism, has never recognized Israel and "has not played a constructive role in the Middle East peace process."

The testimony appeared to echo President Reagan's statement to a news conference a day earlier that, in essence, Israel is "justifiably concerned with its security."

Stoeessel made clear the United States and Israel do not disagree that

Iraq's nuclear weapons programs — had it continued along its pre-June 7 course — eventually would have produced a nuclear weapon.

"We have long been concerned about the Iraqi nuclear program because of the sensitivity of the region and because it would eventually give Iraq the capability to build an atomic weapon," he said.

But Stoeessel said Washington and Tel Aviv clearly disagree on the imminence of such a possibility.

"We are not able to make a definitive judgment ourselves that would confirm that Israel's position," he said. "We are not in a position to make such a definitive finding."

Earlier Wednesday, Sen. Charles Percy, R-Ill., chairman of the Senate Foreign Relations Committee, suggested Congress would never cut off aid to Israel. But he indicated some "guiding principle" required from Israel before Reagan's suspension of F-16 deliveries could be lifted.

The wording of the committee will hear Thursday from Stoeessel and CIA director William Casey.

Stoeessel said the administration was not prepared at this time "to make any judgments on the merits of the various arguments or decide on an appropriate response" to the raid, including whether or not the Jewish state violated its arms agreement prohibiting American-made weapons to be used offensively.

"I would emphasize that this issue, at its core, is political rather than legal and we therefore should ensure that our efforts are devoted to achieving a political resolution of the tensions and instabilities which plague the region," he said.

Brazil-to-Iraq uranium hijacked?

SAO PAULO, Brazil (UPI) — A secret eight-ton shipment of Brazilian uranium en route to Iraq was intercepted and hijacked by U.S.-built jet fighters over the African coast in January, a leading newspaper in Brazil reported Wednesday.

A spokesman for the Brazilian government labeled the report a "complete lie."

The newspaper, *Estado de Sao Paulo*, said two Iraqi planes, a Boeing 727 and a Russian-built Ilyushin, landed Jan. 13 and 14 at the Sao Jose Dos Campos military airfield 50 miles outside Sao Paulo.

The two planes were widely reported at the time to have been loaded with arms and missiles for Iraq's war with Iran, but the newspaper quoted officials as saying the supplies included eight tons of 99.5 percent pure uranium oxide packed aboard the Ilyushin in crates marked to look like ordinary military equipment.

None of the uranium reached Iraq, the paper said, because the Ilyushin was intercepted by F-5 fighters over the African coast and forced to land. The Boeing, it said, was shot down in the West German sea to Iraq, officials sources told the paper.

The report did not specify whose F-5s were involved but cited sources within Brazil's missile-building Avibras Aerospacial Company who said the Ilyushin "arrived at its destination without the cargo it loaded in Brazil."

Israel, which bombed Iraq's nuclear reactor June 7, is not known to own F-5s but the U.S.-built jet is listed as being in the arsenals of Iran, Brazil, Saudi Arabia, Chile, Jordan and the United States.

Raul Taunay, spokesman for Brazil's Foreign Ministry, said the newspaper report was a complete lie and that Brazil was not exporting uranium but importing it to meet its own needs.

"The planes carried only armament spares," he said.

The newspaper cited officials within the Energy Research Institute connected with the University of Sao Paulo who said the uranium shipped to Iraq came from a 100-ton stockpile of natural uranium Brazil has built up over the years, and which is now being processed to a 99.5 percent purity level in a pilot plant run by the university.

Ambassador deals with Iraq

UNITED NATIONS (UPI) — The United States negotiated directly with Iraq Wednesday trying to avoid a political confrontation in the U.N. Security Council.

U.S. Ambassador Jeane Kirkpatrick met repeatedly with Iraqi Foreign Minister Saadoun Hammadi to discuss chances for a compromise resolution in the Council on a resolution about Israel's raid on Iraq's nuclear reactor.

She said she was still hopeful for a consensus and would continue her efforts.

The Council heard more speakers on the fifth day of its debate on the Israeli attack, but real action remained behind the scenes where diplomats were trying to formulate a resolution acceptable to both Iraq and the United States.

Hoping for an agreement, Mrs. Kirkpatrick twice postponed her statement to the Council.

"The speech is a lot less important than finding a consensus," the U.S. ambassador told reporters. "Discussions with Hammadi are still going on actively."

The non-aligned delegates prepared an eight-point resolution as a basis for the negotiations. They have changed the wording repeatedly over the last few days, once eliminating a call for mandatory sanctions against Israel and then restoring it.

If it is maintained, the United States was certain to veto the resolution — a move Washington is trying to avoid since it could gravely affect U.S.-Arab relations.

Diplomatic sources said Hammadi, who asked for the sanctions, had been fairly flexible in the negotiations. If he can agree with Mrs. Kirkpatrick on a moderated text, the non-aligned group will have to go along with it.

What Washington had in mind was a moderate condemnation of Israel's June 7 raid but the Arabs and their allies have so far been unwilling to accept this.

In Washington, the Reagan administration publicly disagreed with Mrs. Kirkpatrick that Iraq was on the verge of acquiring nuclear weapons.

Undersecretary of State Walter Stoeessel told a joint hearing of two House Foreign Affairs subcommittees that the administration was unable to make a definite judgment that would confirm the Israeli position.

The Security Council was expected to continue its debate at least until today.

It will also have to take a decision by Friday night on continuing the U.N. buffer force in South Lebanon, a subject that could trigger another debate on Israel's role in the area.

Legal services foes plan last-ditch effort

WASHINGTON (UPI) — House Republican leader Robert Michel said Wednesday a federal legal services program for the poor may make a last-ditch effort to turn it over to state and local control.

House Republicans are divided. Some favor a proposed two-year extension of the Legal Service Corp. if it contains enough safeguards against abuse, and others want to abolish it outright, as President Reagan wishes.

If the bill fails to become law, the corporation created in 1974 to reform the abuses of a predecessor agency will go out of existence Sept. 30.

For a second day, the House debated an array of proposals for making the agency abuse-proof, especially by tightening a rule forbidding class-action suits against federal, state and local agencies.

Asked if the Republicans will change their opposition strategy because of word from the White House that the president is being advised to veto the bill if it passes, Michel said one possibility is to offer a substitute "suggesting a block grant approach with up to \$100 million for legal services."

Vietnam vets take hunger strike to Washington

WASHINGTON (UPI) — A squad of eight hunger strikers, angry over the lack of concern shown Vietnam veterans, brought their protest to the nation's capital Wednesday.

"This is where the war began," said a spokesman. "This is where the war will end."

The protesters, all of whom served in Vietnam, vowed to continue their fast "for the duration." One has not eaten in 28 days.

Michael McCarthy, spokesman for the Veterans Coalition, said the group plans a vigil in a park across from the White House so "each morning and afternoon, before the president goes to bed, he will be able to look out the Oval Office and see that we are here."

He said the group has not heard from the president.

Originally part of the group of veterans who staged a hunger strike in California, the protesters arrived Wednesday night from Los Angeles and received "sanctuary" at the St. Stephen and the Incarnation Episcopal Church.

In a news conference on the church steps Wednesday, McCarthy, not one of the strikers, said they demand:

- A meeting with Reagan.
- Outside evaluation of all Veterans Administration hospitals.
- Research into the long-term health problems of Agent Orange defoliant.
- Medical examination of all 4.2 million Vietnam vets.
- He said the men were willing to go "all the way" with their fast. "These men know what death is about," he said.

Keep Your Water!

Protect yourself: record your water rights by June 30, 1983.

Many people who use Idaho's public water think because their land and water ownership are recorded at the county courthouse, they have a recorded right. This simply isn't so.

According to a law passed in 1978 by the Idaho legislature, you can only place a water right on record through a court of law or through the Idaho Department of Water Resources. And you must do so by June 30, 1983 to avoid the possibility of forfeiture.

Idahoans can comply with the law requiring the recording of water rights — and to protect your self — you must record your water right, you take water from a well or surface water source and use it to:

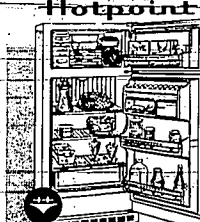

- Irrigate more than one-half acre of land, or
- Provide water for fish farming, a greenhouse, mining or other beneficial use, or
- Supply water to more than one household or to a subdivision, mobile home park or commercial establishment.

Learn how to protect your water rights.

Write for a free brochure to: **Keep Your Water!** c/o Idaho Department of Water Resources 1041 Blue Lakes Blvd. North Twin Falls, Idaho 83301 734-3578

Return of money
a welcome action

The State Board of Examiners deserves credit for putting \$7.1 million back into the hands of the state's property owners.

The amount is what is commonly referred to as the "holdback" of 1980, when state spending was reduced. While the individual taxpayer will receive only \$10 to \$15 in tax relief, it is the principal here that is important. That money was in effect borrowed from property owners; the board was obligated to return it when it became clear the state would end this fiscal year with a surplus of revenue.

There also were good and logical arguments to provide the holdback money directly to the schools, since educational funding is far from what it should be. But that remedy must be provided by the Legislature, which decides on the funding level for education. Besides, the question of funding education through property taxes is something long overdue for reform.

Perhaps the state board's action will return some taxpayer trust to government. Property tax relief, in any amount, will certainly be viewed as a welcome development.

Competitive bidding
only fair way to go

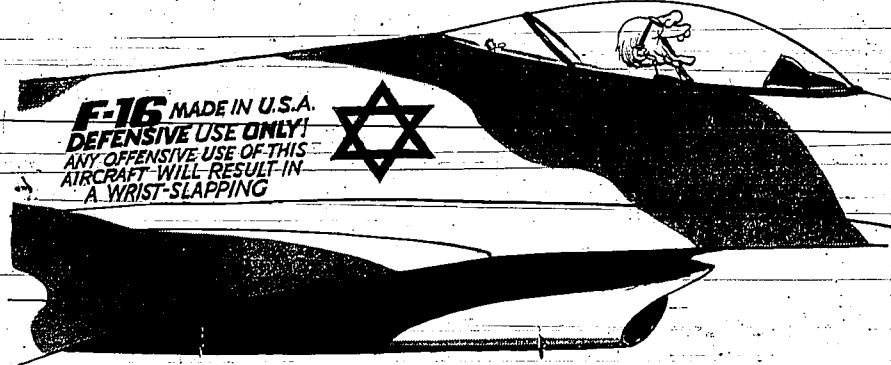

The State Land Board wisely has decided to put all oil and gas leasing of state lands on a competitive bidding basis.

The board voted that position Monday, although it had been considering some partial, or cursory, bidding as well. But critics of that plan said such an arrangement would constitute a "giveaway."

The new policy makes all those who want leases play by the same rules; it gives them all an equal chance to win the right to drill and explore.

Gov. John Evans supported a strict competitive-bid basis only while Attorney General David Leroy argued for a hybrid plan. All competitive bidding, Leroy said, might limit exploration activity and reduce interest in the state. The important thing was to get the land board to make a decision so that the state could begin earning money on leases.

Although there has been no major oil or gas strike in Idaho, oilmen believe it is only a matter of time. The state has got to be in a prime position to take advantage of exploration and royalties when it happens.

Ellen Goodman

Equal pay for women a joke

Washington Post Writers Group

BOSTON — Once, it was an utterly radical idea.

Only the most wild-eyed souls in the early 1900s thought that a woman who was doing the same job as a man ought to be paid the same amount.

But by the mid-Sixties, the notion was mainstream enough to be made into law in both the Equal Pay Act of 1963 and the Civil Rights Act of 1964. By 1980, even the most conservative candidate said that equal pay for equal work was just plain American fair play.

Well, the irony is that this massive change in attitudes didn't actually change paychecks very much. In the late 1930s, the average working woman was earning about 58 cents for every dollar the average working man earned. In 1980, she was earning 59 cents.

Women have been catching up roughly at the rate of two cents a century.

The concept of equal pay for the same work doesn't help women, because few of them actually do the same work. About 80 percent of the

working women in this country — 33 million of them — work in jobs that are largely "women's jobs." A full 99.5 percent of secretaries, 94 percent of telephone operators, and 96 percent of registered nurses are female. About 96 percent of all career ladders are segregated by sex and so are the paychecks.

The wages of these jobs are not primarily ruled on such economic necessities as supply and demand, or the mysterious workings of the free economy. One quick look at the Help Wanted pages makes that obvious. Despite the much-heralded secretarial shortage, wages in that field have gone up no faster than wages in the shrinking manufacturing market.

The wages of these jobs are kept low traditionally and arbitrarily because women do these jobs.

In response to this reality, the debate about women's work has changed focus. The question now being asked is whether women should get equal pay for "comparable work" for work that is "equally valuable." The AFL-CIO has adopted this idea and so have many women's groups.

Until now, the concept has had an uncertain legal basis. Not long ago, women in Denver tried to sue for sex discrimination because they were paid less than tree-trimmers or parking-meter repairers. Their case was turned down by the circuit court.

Last week, in a careful, limited decision that virtually quivered with anxiety, the Supreme Court ruled 5-4 that, yes, employees can sue for discrimination under Title 7 of the Civil Rights Act even if they are not doing identical work.

The case in point was a classic. In Oregon, a group of jail matrons who guarded female inmates were paid \$200 less per month than a group of deputy sheriffs who guarded males. The matrons didn't claim they held the same jobs. The women had fewer inmates and more clerical work. But an outside evaluator had shown the employer that the women were doing 95 percent of what the men were doing.

As Judith Lichtman, head of the Women's Legal Defense Fund, put it: "They were discriminating the job because women did it."

Now these women, and millions of

others, have won the right to sue. "This is the first step," says Karen Nussbaum, president of Working Women-A National Association of Office Workers. "It's saying, let's look at the job, and if your job is paid less because women do it, that's discrimination. Common sense tells us that; now the Supreme Court backs it up."

All of this new talk makes employers break out in hives. They talk about a flood of new cases. They talk about the cost of evaluating the relative work of a secretary and a truck driver. They warn us all about the dangers of a regulated economy. They even remind us about the In-Visible Hand of the free marketplace, and now it works wonders for all of us. But I suspect this In-Visible Hand is the same one that sewed the Emperor's New Clothes. Working women already live in an economy that's regulated against them. A world in which parking-lot attendants make more than child-care workers.

With a little help from the courts and a lot of organizing, the concept of equal pay for comparable work may soon seem like just plain American fair play.

Letters

Debate is good

Editor, Times-News:

Thank you for airing the pro-life/pro-choice debate. Many have found out too late that they have made the wrong choice. So your publication of these letters surely serves the public, born or unborn.

I thank God for a mother who did not choose abortion; though it meant a grinding struggle to keep me and my brother and sisters healthy. Even though it meant she had to sacrifice her life for us.

The mothers (and fathers) who choose abortion simply are not willing to sacrifice their own lives and futures so that other human beings, their own flesh and blood, might have the opportunity to live.

Jesus Christ said it: "Greater love hath no man than this, that a man lay down his life for his friends."

On the other hand, perhaps, who would want to be born and raised by a "mother" who would rather kill you in order that she might live her life?

God have mercy on us sinners all.

Aliens rebuttal

Editor, Times-News:

Thanks to Janet Kunz, McCammon, who attempted to answer questions regarding aliens I put to your readers in a letter to the editor.

Mrs. Kunz: "99 percent of all alien labor pay Social Security taxes."

FACT: The Twin Falls office of Social Security has not one centavo credited to Social Security from illegal aliens.

Mrs. Kunz: "Farmers have been unable to hire reliable workers among the American population."

FACT: In the Twin Falls office of unemployment there are at present only three requests for farm labor, two hay, one irrigation.

There are 125 applicants seeking farm work. And over 200 women seeking other farm jobs.

At present there are over 1,200

persons seeking work through the Twin Falls office.

Mrs. Kunz: "Compares Congressmen Hansen's conviction on campaign laws to a traffic fine."

FACT: I have to assume that Congressman Hansen takes the charges and conviction more serious, of course to may not. She may be right.

FACT: Many illegal aliens are not working in farm related jobs.

Just take a trip to Nevada and visit the gambling joints. If you cannot speak Spanish you just might get your hamburger.

Mrs. Kunz points out that it is not illegal to hire an alien, only to transfer them.

Could it be the gambling interests are in the business of transporting these aliens for their own use and the use of farmers?

FACT: The issue now is the same as what our civil war was all about: "cheap labor."

ROBERT JOHNSON
Twin Falls

Abortion view

Editor, Times-News:

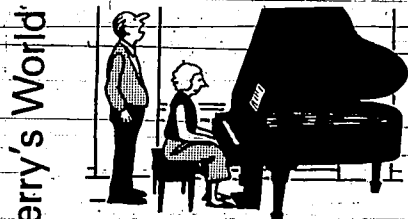

I don't agree with anyone on the abortion view. Abortion is murder, no matter how you look at it.

My parents had it children and we had as good food, clothes and love as anybody. They helped us help ourselves to get an education. They taught us morality and we were punished when we needed it. Neither of my parents smoked or drank beer. Once, I asked my mother "if she didn't get tired of having babies." She said "It is a good thing I didn't or you wouldn't have been here."

I have had a good life and wondered if those voting for the abortion law wish they had been aborted.

My husband and I had a baby daughter when I was 39 and she has truly been a blessing to us. Our two sons were 16 and 12 and all of us loved her. None of us, in four generations, have been on welfare or used food stamps.

Why Israel was justified in bombing Iraq's reactor

The Washington Post Company

WASHINGTON — Iraq's reactor, located near the Tigris and Euphrates rivers, was a symbol of modernity in a cradle of ancient civilization.

Israel's attack on the reactor, coinciding with renewed Russian omniscience regarding Poland, suggests that the world may face a moment of turmoil unmatched in a quarter of a century. Since, that is, 1956, when convulsions in the Middle East (Suez) and Eastern Europe (Hungary) coincided.

A Washington Post headline above the fold on the front page describes the danger to Poland. Below the fold, a headline says: "Russia: Can Buy U.S. Grain But No Butter." What about margarine? And what would constitute "butter-worthy behavior" by Russia? Even the adjectives of diplomacy

are uncommonly confused. The Russians recently expressed "sisterly" affection for Poland. When Sen. Charles Percy (R-Ill.) was in Moscow after the election, he asked an official about Russia's intentions regarding Poland. The official replied: Poland? Poland is sovereign; we have nothing to do with Poland. But Percy assured the official that Russia has a "fatherly" interest in Poland.

Now, bringing his analytic powers to bear on Israel's raid, Percy says Iraq was many years away from developing nuclear weapons. It is conceivable that he is correct, although he probably is relying on U.S. intelligence estimates which are, to say no more, fallible. But even if Percy is correct, he is beside the point. The point is that Israeli intelligence "pessimists" say Iraq could have had a bomb in two years, "optimists" say five years, and —

most important — there is consensus that this was the last chance to destroy the reactor without spreading radioactive contamination.

When Iraq insisted on buying a reactor that requires weapons-grade uranium, Iraq got its way. When Israel tried through diplomacy to ward off the danger, it got nowhere. Iraq's polluter character singularly unsuited Iraq for being custodian of the nuclear weapons it was going to build.

Many of the Americans who advocated the defense policies and detente diplomacy that cost the United States its military superiority are now criticizing Israel for what the New York Times, an advocate of unilateral, aid, unreciprocated restraint, calls "pursuit of an unsustainable superiority." Israel, which has a smaller margin of safety than the United States has ever had, will be

forgotten for not heeding the counsel of those Americans whose repudiated policies deepened America's peril.

Temperate critics of Israel argue that producing nuclear weapons requires technological skills beyond the capacity of a country like Iraq; and that even if Iraq produced a few weapons, Israel, which has a significant nuclear arsenal, would still find itself in a situation of stable deterrence.

Without endorsing that assessment of its nuclear capability, Israel can reply that deterrence assumes a degree of rationality that cannot be assumed regarding the volatile leadership classes of many nations, and least of all Iraq, which has a reputation for ferocity and instability notable even in that region. Israeli leaders, who know that one nuclear weapon used against Tel Aviv would destroy Israel, cannot responsibly rest Israel's security on the soothing

assertion that her enemies are technologically backward but politically sophisticated.

The world has forfeited the right to expect Israel to conform to "world opinion." Israel has been isolated by a "world opinion" increasingly tolerant of, indeed obsequious toward, a terrorist organization, the PLO, that is dedicated to Israel's destruction.

Furthermore, rhetoric is not always a reliable measure of real opinion. Arab nations that do not really want to see a Palestinian state say that they do. And today some diplomats who are depicting Israel's elimination of a nuclear weapons facility almost certainly are feeling relief about that — relief, and fugitive wishes that a few similar installations elsewhere would suffer a similar fate.

Those who specialize in specious moral symmetries are asking: Israel has a nuclear capability, so why should not Iraq? The answer is that

Israel does not reject Iraq's right to exist. Thirty days last year that Iraq declared that its nuclear capability was directed against "the Zionist enemy" was the day, Israelis will agree, that Israel became entitled to act in self-defense.

There is a danger that Americans will give themselves over entirely to the scholasticism encouraged by the U.S. restricting the use of American-made weapons to "defensive" uses. Americans should save some energy — for imagining the dreadful dilemma America would be in if Israel were threatened with nuclear attack.

One portion of the U.S. government is mulling about punishing Israel, and another portion is busy filling Russia's pantry. But then, Oscar Wilde defined fiction as a situation where the good prosper and the bad suffer.

Supreme Court

Prosecutors can use racketeering law against any scheme

WASHINGTON (UPI) — In a decision that gives sweeping power to prosecutors trying to root out organized crime, the Supreme Court ruled Wednesday a key anti-racketeering law can be used against any criminal scheme.

The 5-4 decision from the Justice Department to go after organized crime figures, both to rid legitimate businesses of underworld influence and to attack illegal enterprises.

The ruling clears the way for final resolution of scores of important racketeering cases that have been held up in lower courts while the Supreme Court studied the law.

The court majority rejected arguments that the racketeering statute improperly intrudes on the turf of state law enforcement agencies.

Writing for the court, Justice Byron White said Congress passed the Racketeer Influenced and

Corrupt Organizations Act because it believed "existing law, state and federal, was not adequate to address the problem, which was of national dimensions."

White said Congress passed the law — commonly called RICO — "knowing that it would alter somewhat the role of the federal government in the war against organized crime."

Justice Department spokesman Tom DeCair said the decision "strengthens the government's capacity to combat a wide variety of organized criminal activity."

"We anticipate that the (RICO) statute will be used even more effectively to combat organized crime in the future," he said, calling the ruling "very significant."

Justice Potter Stewart was the lone dissenter, stating only that he agreed with the lower court decision.

The ruling struck down a decision that had overturned the conviction of a Massachusetts man, Novia Turkette Jr. He was found guilty of participating in a drug trafficking operation, a scheme to commit arson to defraud insurance companies and a police payoff racket.

The law at issue declares it is unlawful to influence, through a pattern of racketeering activity, an "enterprise" affecting interstate commerce. The case turned on whether an "enterprise" is only a legitimate business or whether it also can be an illegal association of criminals.

The Justice Department argued the statute allows prosecutors to go after legitimate businesses influenced by the underworld as well as wholly criminal schemes.

No special help for reservists

WASHINGTON (UPI) — Members of the military reserves are not entitled to special treatment by their employers to help them meet their armed forces obligations, a split Supreme Court ruled Wednesday.

The 5-4 decision upheld a ruling that an Ohio refinery is not required to make special arrangements for an employee whose rotating workweek conflicted with his weekend military training.

Justice Potter Stewart, writing for the court, said the Vietnam Era Veterans' Readjustment Allowance Act does not give reserve members any special privileges.

There is nothing about the law "to indicate Congress ever even considered imposing an obligation

on employers to provide a special work scheduling preference," Stewart said.

The court concluded that "Congress did not intend employers to provide special benefits to employee-reservists not generally made available to other employees."

Chief Justice Warren Burger — joined by Justices William Brennan, Harry Blackmun and Lewis Powell — assailed that position.

Burger said the law was designed to "expand employment safeguards for reservists and thereby encourage participation in the ready reserves and the National Guard so as to strengthen our national defense effort without... mandatory military service."

Inmates dealt another blow

WASHINGTON (UPI) — The Supreme Court dealt a double blow to prison inmates in a pair of decisions Wednesday, narrowing the rights of convicts seeking pardons and expanding government power to transfer prisoners.

The rulings came on the heels of a major high court decision Monday that states may confine two inmates in a cell designed for one.

Acting Wednesday in a Connecticut case, the court ruled a prison pardon board does not have to give an inmate a written explanation when it rejects a pardon request.

The 7-2 decision overturned a ruling that a prisoner has a constitutional right to a formal explanation.

Unlike probation, pardon and commutation decisions have not traditionally been the business of courts," Chief Justice Warren Burger wrote for the court. "A decision whether to commute a long-term sentence generally depends... on purely subjective evaluations and on predictions of future behavior by those entrusted with the decision."

Dissenting Justices John Paul Stevens and Thurgood Marshall argued that an inmate should be entitled to a "brief statement of reasons" as an "essential element" of the due process for prisoners.

House committee OKs business tax relief

WASHINGTON (UPI) — The House tax-writing committee Wednesday approved a Democratic concept for easing business taxes that is vastly different from President Reagan's suggested plan.

The Democratic alternative came out of committee with a favorable 21-14 vote shortly after House Speaker Thomas O'Neill denied that Democrats are stalling on tax cut work.

Further pressure was placed on the committee to expedite matters as the Republican-dominated Senate Finance Committee said it would begin drafting its own bill rather than wait for the House to act, although money bills are required to originate in the House.

The Ways and Means plan would allow firms to write off their equipment expenses in one year rather than depreciating them over five years as the administration proposes. All 12 of the panel's Republicans, plus two Democrats, voted against the proposal, which also would cut the corporate tax rate beginning in 1984. Rep. Kent Hance of Texas, the

conservative Democrat who promised to support the administration plan, and Rep. James Jones, D-Okla., opposed the Democratic alternative.

Jones, chairman of the House Budget Committee, was among the original sponsors of the accelerated depreciation plan on which the administration based its tax cut proposal.

Ways and Means chairman Dan Rostenkowski, D-Ill., said the panel will continue to work on the business tax cut proposal Thursday.

The panel probably will consider individual tax cuts when Congress returns from its July 4 recess, a committee aide said.

After meeting with other Ways and Means Democrats Wednesday, Rep. Sam Gibbons, D-Fla., announced a proposal to let businesses write off, or "expense," their equipment purchases in one year rather than depreciating capital costs over five years as the administration proposed. The "expensing" plan would be phased over 10 years.

Budget battle continues House Demos propose \$1.7 billion added aid

WASHINGTON (UPI) — House Democrats moved Wednesday to add \$1.7 billion for programs benefiting school children and the elderly to a committee budget proposal.

But GOP leader Robert Michel of Illinois said Republicans still have not decided whether to propose an alternative aimed at fixing what they consider unrealistic goals.

If they do decide to offer it, he said, he has told House Speaker Thomas O'Neill, "It would be totally unfair if they denied us as a party the opportunity to offer at least one option."

Democratic leaders are considering a strategy that would prohibit any amendments in the House.

Michel said he is still concerned about the fact that Democratic-controlled committees have made cuts without approving the block grant approach President Reagan wants, to give states flexibility for spending on specific programs.

Michel's remarks came hours after the House Education and Labor Committee voted 24-10 to divert \$1.5 billion, mostly from "public service

Jobs, plus an extra \$200 million, to a series of popular programs."

They include aid to disadvantaged elementary and secondary school children, impact aid to school districts serving federal workers, and nutrition and jobs programs for the elderly.

Under the revised package, the panel still would largely meet its quota of almost \$10 billion in fiscal 1982 budget cuts — a large chunk of the total \$35 billion in federal spending reductions required under earlier legislation.

Committee Democrats earlier proposed cuts they knew were too harsh, intending to defeat them on the House floor next week.

But in the face of a growing threat from Republicans to offer their own set of cuts, Democratic leaders decided to offer honest proposals so Republicans could not accuse them of playing political games.

They also were concerned that the severity of the original Democratic proposals "would help Republican chances."

People

Man wants no-cursing day

By United Press International

CURSEAHOLICS

The founder of "Curseaholics Anonymous" admits he may have "jumped the gun" last week when he called for making public profanity a felony. Now Paul White Jr., 22, proposes a national anti-cursing day. White, a Cambridge, Mass., car salesman, hopes to get profanity "out of the schools, homes and ballparks." He said State Sen. George Bachrach, would help him write up a no-cursing day petition to send to Congress.

KISS KULTURE

More than 270,000 people in Eastern Europe saw a cultural exhibit called America Now: A Look at the Arts of the '70s,' staged by the U.S. International Communications Agency. Among the exhibits was a "Pop Rock, Country Music" showcase featuring musical instruments and photos of the stars. In the name of culture, the people of Zagreb, Yugoslavia, Budapest, Hungary, and Bucharest, Romania, viewed a life-

size mannequin dressed in the bizarre costume and makeup of Gene Simmons of the rock group Kiss.

CALLING ALL CARS

When comedian and impersonator Frank Gorshin took around Connecticut in his car, people stare. It isn't because they recognize him as a celebrity. It isn't even because he drives a Rolls Royce Corniche. Connecticut is one of those states where you can arrange to have "vanity" license plates stamped to order. The plates on Gorshin's car say, "STOLEN."

HONEYMOON PLANS

Prince Charles and Lady Diana Spencer have been forced to change their honeymoon plans—for economy reasons. According to a source close to the wedding plans, the newlyweds had intended to sail the royal yacht Britannia on an August cruise in the Caribbean. Then the ship would proceed to Australia via the Panama Canal for Queen Elizabeth's official visit in the fall. But John Nott, British defense minister, said it would be

cheaper to use the Suez Canal. The royal newlyweds will have to settle for a cruise of the Greek Islands.

ERUZIONI HONORED

Mike Erzuone, who captained the U.S. Olympic hockey team to a gold medal, defeating the Russians in the 1980 winter games, Thursday was to be named Outstanding Achiever of 1980 by Junior Achievement of New York. The occasion was F.X.P.O. displaying goods manufactured by hundreds of New York metropolitan area companies run by teenagers under the supervision of local businessmen.

NEW "OTHELLO"

James Earl Jones will play "Othello" this August, and Christopher Plummer the villainous Iago, at the American Shakespeare Theater—in Stratford, Conn. Then "Othello" will go on tour for six months, playing at least 10 cities, before opening on Broadway. Before "Othello" opens Plummer will appear at Stratford with Roy Dotrice in "Henry V."

What's Prince Charles' last name?

LONDON (UPI) — Prince Charles is of the House and Family of Windsor, but that doesn't give him a surname in the ordinary sense of the word.

He is not Charles Windsor. When he signs a check or any other official document he signs simply "Charles."

So says a Buckingham Palace spokesman. Not everyone considers this crystal clear. The editor of the official guide to the peerage, Debrett's, refused even to discuss the matter, though he usually is happy to be the final word on such interpretations.

"As to the palace," he said, for the first time in living memory.

The official Central Office of Information says that before 1917 the

royal family had no surname because all its members were Princes or Princesses and used only their first names. In that year King George restricted the use of "princely styles" to those entitled to be called royal highnesses.

This meant he had to create a surname for descendants outside this elite group. The royal family originally belonged to the German House of Hanover but since Britain was fighting Germany at the time he chose an English name, Windsor.

For example, the Duke of Kent, cousin of the Queen, is a royal highness and signs "Edward."

His first-born son and heir, who will succeed to the royal dukedom, is listed in Debrett's as George Philip

Nicholas, Earl of St. Andrews. He signs "St. Andrews" now and will sign "George" when he succeeds to the royal dukedom.

His younger brother, who is not and will not be a royal highness, is listed as Lord Nicholas Charles Edward Jonathan Windsor.

Prince Philip, the Duke of Edinburgh, was born without a surname. His father was Prince Andrew of Greece and Denmark. Philip came under the guidance in Britain of his uncle, Lord Mountbatten, and adopted his uncle's title as a surname.

Lord Mountbatten's father had the German title of Prince of Battenberg. He used the English translation in the name-changing from the German that went on during World War I.

Baptist gives worst little cab ride in Arkansas

LITTLE ROCK, Ark. (UPI) — Identifying himself as a stagehand for "The Best Little Whorehouse in Texas," got Wayne Caulder dumped in the streets of Little Rock, Ark.

Caulder flew in with the Broadway musical's national touring company for a week-long run in Little Rock late Tuesday. He had the misfortune to hail a Southern Baptist cab driver at the airport.

On the way to the hotel, the driver asked Caulder what he was doing in town.

"I told him I was working in 'Whorehouse,'" he said he was a Southern Baptist and they were against the show coming here. He told me I had to get out," Caulder said.

The driver ejected Caulder and his baggage, leaving the befuddled electrical stand-in on a corner in a dark residential section of town.

"He was very nice about it. He didn't make me pay the fare," he said.

Luckily, Caulder happened to spot another cab within minutes and made it to his hotel.

He said he couldn't report the cab to the police or the taxi company because "I don't even know what the cab looked like. I was laughing too hard."

'Heaven's Gate' may be top loser

HOLLYWOOD (UPI) — Transamerica Corp. admits it could lose as much as \$44 million on the critically panned and commercially bombed flop "Heaven's Gate," a figure that would make it the biggest money-loser in movie history.

The epic western's dismal showing is said to have helped trigger Transamerica's pending sale of United Artists Corp., its movie-making subsidiary, which produced the film for an estimated \$38 million and spent another \$8 million on re-editing,

advertising and promotion. But the film's huge losses will not reduce the \$300-million price that Metro-Goldwyn-Mayer Film Co. agreed to pay for United Artists last month, a spokesman for San Francisco-based Transamerica said.

When the \$44-million figure surfaced Tuesday, film industry analysts called it the biggest loss yet in the high-risk film industry, but they remembered how Twentieth Century-Fox Film Corp.'s "Cleopatra" lost an estimated \$18 million to \$25 million

Afghans burn Soviet airbase

NEW DELHI, India (UPI) — Afghan guerrillas set fire to ammunition and fuel dumps at a Soviet airbase north of Kabul, a Western diplomat said Wednesday.
The fire forced the Russians to fly their jet fighters and helicopters off the base to escape the explosions.
The spectacular attack on the Soviet air force base at Bagram eight days ago was one of several guerrilla strikes to mark the anniversary of the death of Abdul Nijib Kalakani, a "Robin Hood"-type rebel who reportedly gave captured goods to the poor.
The guerrillas "poured gasoline in the drain ditches leading into the airfield and set it on fire," spreading flames across the Soviet base which is used to coordinate attacks on rebels throughout Afghanistan, a Western

diplomat in New Delhi said.
The fire engulfed large ammunition and gasoline depots at the base, 35 miles north of the Afghan capital, starting a fire that burned for more than 24 hours. Shrapnel from the explosions fell several miles away, the diplomat said.
"Soviet MIG jetfighter bombers and helicopter gunships at the base took off shortly after the first explosion to escape the flames," the diplomat added.
He had no immediate reports of casualties. The Sama-rebel band who set the fire claimed responsibility for the attack and warned in leaflets distributed around Kabul that they would strike every year on the anniversary of Kalakani's death.
Afghan authorities captured and executed Kalakani on June 8, 1980

after tracking his 3,000-strong rebel band for months across the rugged mountains of Parwan province north of Kabul.
Kalakani reportedly led attacks by Kabul residents against the Soviets and his tightly knit group still fights Russian troops near their leader's home town, Kalakan, about 10 miles from the airbase.
Kalakani's death was also marked by a guerrilla attack June 9 on the house of the governor of Parwan province in Charikar, about 20 miles north of Kabul, which left six militiamen dead, the Western diplomat said.
He said about 200 Afghan soldiers defected to the rebels during heavy fighting at nearby Jubbassarij in Parwan province June 12 and 13.

OPEC group discusses oil glut

GENEVA, Switzerland (UPI) — A special OPEC committee met Wednesday to discuss price and production levels in the face of a worldwide oil glut that has crippled the cartel's economic power.
The six-member Long Term Strategy Committee, chaired by Saudi Arabian Oil Minister Sheikh Ahmed Zaki Yamani, has no decision-making power and only forwards recommendations to the Organization of Petroleum Exporting Countries' ministerial council.
But the committee's meeting comes at a particularly crucial time for the 13-member cartel, which has been unable to decide what to do about a world oil surplus estimated at 2-3 million barrels per day.

Oil market experts say prices, already in decline, may drop further unless output is slashed by such production giants as Saudi Arabia.
The strategy committee at its 2-3 day meeting was expected to consider a long-standing proposal that would tie the cost of oil to the rate of inflation and other economic indicators in the West.
Saudi officials, indicating that no important decisions were expected, said the committee will probably not issue a communique at the end of the meeting.
At an OPEC summit in late May, Saudi Arabia proposed the cartel set a uniform oil price, which would have involved reductions by several of the cartel's price "hawks".

The members rejected price reductions and instead froze prices, which vary from \$12 per barrel to \$14, around a "standard" level of \$8. The members also agreed to a production cut of 10 percent each, which was practically in effect anyway as they attempted to meet reduced demand.
Saudi Arabia says it is maintaining a high daily output of 10.3 million barrels to keep prices down and shelter Western economies from further inflation.
Other members of the strategy committee are Venezuelan Oil Minister Humberto Calderon-Berti and lower-ranking oil officials from Algeria, Kuwait, Iran and Iraq.
In a related development, an official of the Organization of Arab Petroleum Exporting Countries said the group had not been asked to consider punitive measures against the United States if it vetoes a U.N. Security Council resolution against Israel for its attack on Iraq's nuclear reactor.

The USS Ohio waits at its dock in Groton, Conn., before its first sea trials

Protesters watch Trident test

GROTON, Conn. (UPI) — Anti-nuclear protesters and cheering sailors Wednesday sent the Navy's mightiest underwater warship off on its first sea trials in waters closely monitored by a Soviet spy ship.

The nation's first Trident submarine, the USS Ohio, was escorted from its construction berth at the Electric Boat Division of General Dynamics Corp. at the break of dawn and knifed through the fog-shrouded Thames River toward Block Island Sound and the Atlantic Ocean.

Two protesters, who dove into the chilly water and swam to the shipyard in an attempt to block the maiden voyage of the massive missile-firing warship, were arrested.

Some 50 anti-nuclear demonstrators, softly singing peace songs, lined a nearby beach and competed with some 50 sailors and shipyard workers cheering and applauding as the looming black silhouette of the Ohio passed Eastern Point.

The Navy said Adm. Hyman G. Rickover, the 81-year-old father of the nuclear Navy, would direct the 33-day, North Atlantic sea trials of the 600-foot, 18,700-ton ship, which cost more than \$1.2 billion.

Concern over the delayed sea trials heightened when a Soviet intelligence vessel, posing as a fishing ship, was sighted off Long Island in waters the Ohio must pass to reach the North Atlantic.

Administration sources said the spy ship Ekowator apparently planned to use its sophisticated equipment to monitor the trial run of the Ohio.

The Ohio carried 154 crew members and about 50 Electric Boat Division and Navy officials. A 251-foot submarine rescue ship was to escort it through the trials, the Navy said.

The Ohio, nearly the length of two football fields, carries 24 missiles that are each capable of hitting targets 4,000 nautical miles away.

It was first scheduled for delivery to the Navy in April 1979, but the date was put off several times. Shipyard officials have said the submarine would be ready for delivery Oct. 31 if sea trials began in mid-June and there were no problems or design changes.

The demonstrators said the Trident represented "nuclear overkill" and carried bombs capable of the equivalent of 2,300 Hiroshima nuclear bombings.

"It is very important to be here so that history shows this unspeakable madness did not go on without protest," said John Bach, 34, of Hartford, who swam across the Thames trying to reach the Ohio.

Bach and Timothy Quinn, 26, of Hartford, were charged with criminal trespass in the third degree and released.

A schooner carrying a dozen protesters followed the Ohio about five miles.

But nobody knew

Convict misses execution date

OKLAHOMA CITY (UPI) — A state appellate judge said Wednesday a condemned double slayer whose execution wasn't stayed until two days after the date a lower court had ordered him to die was never in real danger of dying.

"But we don't like for this sort of thing to happen," Tom Brett, presiding judge of the Court of Criminal Appeals, said of the mixup.

Brett issued a written order Wednesday, staying a lower court's order which had set the execution of James William White, 24, Gentry, Ark., for Monday, June 15.

White was found guilty on two counts of first degree murder for the pistol-slashing of his former girlfriend and her newly wed husband near

Cotcord, Okla., in June, 1980. Brett blamed a combination of errors, including a computer discrepancy, for the chain of events. The state not only failed to execute White, but an automatic appeal required by law was never filed.

Brett had issued an oral stay Tuesday night after United Press International had called to inquire about White's status.

"There was little chance he would have been executed," Brett said.

"They never proceeded to execute now until they have checked with this court and the governor's office. And appeals take so long these days, they never execute on the original date set by the court. So there are some safeguards."

Brett said he found after some checking Wednesday that District Judge Sam Fullerton, who had set White's execution following his Feb. 24 trial at Jay, Okla., had not forwarded the information to the appeals court and the governor as required by law.

Joe Moss of Jay, Okla., the court-appointed attorney who defended White, said he didn't think he needed to file an appeal. He said his only contact with White since his death sentence was to ask him to sign a pauper's statement so Moss could collect his fee from the state.

Judge Fullerton needs to talk with that young attorney," Brett said.

Radioactive uranium released

OAK RIDGE, Tenn. (UPI) — A government-owned facility where 53 workers were exposed to a radioactive mist last month has accidentally released 11,270 pounds of radioactive uranium since the facility opened in 1945, Department of Energy officials confirmed Wednesday.

DOE spokesman Jim Alexander said the uranium hexafluoride gas was released in 121 accidents at the Oak Ridge Gaseous Diffusion Plant, part of the massive atomic-energy research and development of Oak Ridge National Laboratory.

Alexander said the releases do not present any measurable health effects at the plant or to the surrounding area.

But a Nuclear Regulatory Commission consultant disagreed, saying any uranium pollution would cause some health problems.

Oak Ridge National Lab was part of the nation's World War II Manhattan Project that developed the atomic bomb.

The figure of 11,270 pounds includes 121 releases measuring 1 kilogram, or 2.2 pounds, and above. Any releases below 1 kilogram were not included. DOE officials compiled the figures on request from reporters following last month's accident at the plant.

In that accident, 53 workers were exposed to the toxic uranium hexafluoride when a hose ruptured.

Alexander said an investigation is under way into the accident and officials do not know how much material was lost.

The gaseous diffusion center is one of three government-run facilities in the nation where natural uranium is enriched and concentrated into a compact, powerful fuel for atomic reactors.

Alexander said some of the 11,270 pounds of uranium was recovered "but we can't say most of it was."

from the floor, while other might have slipped into cracks in the building. Officials said it is not likely any of the uranium was stolen.

"Our first concern is with the health of the employees. We're also concerned with the environment and possibly buildups," Alexander said. "We're also concerned with the material. This is terribly expensive material, with a large dollar value."

Dr. Rosalie Bertell of Toronto, Canada, an NRC consultant, said there is "no doubt" the releases present some health hazards.

"It will cause some problems, but the people affected probably will not be able to link it back with the releases," Dr. Bertell said.

Dr. Bertell said the releases were part of a "regulatory mess."

Ray transferred to Nashville; fears killers will finish job

NASHVILLE, Tenn. (UPI) — James Earl Ray, stabbed 22 times at Brushy State Prison two weeks ago, was transferred against his will Wednesday to Nashville Penitentiary. Ray fears contract killers plan "to finish the job" there.

Officials would say only that transfer of the convicted assassin of Dr. Martin Luther King Jr. was deemed necessary to prevent further attacks on his life.

Prison authorities said Ray passively resisted the move, but Ray told his brother in a telephone conversation that he "put up a fight" and was taken to Nashville "stripped to a stretcher."

Ray, serving 99 years for the sniper slaying of King, had been recovering in the prison near Petros from the June 4 knife attack. Officials said he was taken out of the Brushy infirmary

during the night and arrived in Nashville about 2:30 a.m. EDT.

The 33-year-old Ray had vowed to resist any attempt to move him from Brushy, contending he feared he would be killed if moved to another prison. Officials said they moved Ray to protect him, and his status would be reviewed in 30 days.

Ray was stabbed 22 times while researching his legal case in the prison library at Brushy. Corrections officials said three black inmates, all members of a militant prison organization, were suspects in the attack. Tennessee Bureau of Investigation Chief Arzo Carson speculated the men might have stabbed Ray to gain publicity.

Ray's brother, Jerry, said Ray called him from the Nashville prison. "He was really down in the dumps. He said he put up a fight when they came for him. They finally strapped

him down to a stretcher and took him out. He said when they got to Nashville, they just dumped him in the cell," Jerry Ray said. "They were mad."

Nashville Prison Warden Jim Rose said Ray's allegations were "absolutely untrue."

Rose said when Ray arrived at Nashville, he was asked if he could walk in. Rose said Ray did not answer, so a stretcher was brought, and he was eased onto it.

Jerry Ray said his brother also now believes the stabbing was an attempt to silence him.

"He told me he believes it was a contract killing. He doesn't know by whom, but he said he believes state officials knew someone was going to get him," Jerry Ray said.

"He believes whoever tried to kill him is going to finish the job in Nashville," said Jerry Ray said.

Mayors tangle in partisan battle

LOUISVILLE, Ky. (UPI) — Partisan political battles erupted on the floor during the final session Wednesday of the U.S. Conference of Mayors, which threatened to divide the city executives along party lines.

The major fights took place in the nomination of conference officers and some resolutions, especially the topic of national defense issues.

Republicans in a break with tradition, attempted to nominate San Juan, Puerto Rico, Mayor Hernan Padilla as chairman of the mayor's Advisory Board. The conference nominating committee had chosen Nashville, Tenn., Mayor Richard H. Fulton.

The advisory board chairman would be in a position to become conference president in two years.

Anchorage, Alaska, Mayor George M. Sullivan nominated Padilla, saying the conference should have a bipartisan leadership.

Rosario J. Mayor Richard F. Carr, a strong supporter of President Reagan, said in support of Padilla's nomination, it is a break with tradition but "the future effectiveness of the conference of mayors is a part of the whole proposal."

John Rousakis, the democratic mayor of Savannah, Ga., warned that Padilla's selection would split the conference along party lines.

"If that's how we leave here nobody wins, everybody loses," Rousakis

said. "I call on the conference to come back together and get out of partisan politics."

Padilla's nomination was narrowly defeated 58-49 in a vote that took place primarily along party lines.

Heiden G. Bosalis, mayor of Lincoln, Neb., was selected the conference's first woman president. Detroit Mayor Coleman Young was named vice president and is in line for the presidency next year.

Resolutions to be presented by the conference were hammered out primarily in closed committee sessions dominated by Democrats. Once the resolutions came to the floor for a vote Wednesday, the battles split along party lines with the policies of the Reagan administration at the center.

The biggest fight took place on a resolution calling for a reordering of national priorities. The resolution, presented by Democratic-Milwaukee mayor Henry Maier would have called for the administration to "re-dress" what he called the imbalance between domestic spending and money for foreign aid and the Pentagon.

Another section would have urged the increase of domestic spending as opposed to the deep budget cuts proposed by the president. Carrer gained the fight on behalf of the Reagan administration and deleted any reference to an increase in domestic spending and called for a recognition of the imbalance between foreign and domestic expenditures, which was adopted.

Many people trapped on upper floors during San Francisco rush hour

14th floor fire in high-rise called 'suspicious'

SAN FRANCISCO (UPI) — A fire of "suspicious nature" roared through the 14th floor of a "trouble-plagued downtown high-rise building during the morning rush hour Wednesday, forcing evacuation of hundreds of people from nearby floors and briefly trapping about 100 above the blaze.

The fire, in the 38-story Tishman Building at Market and First streets in the financial district, was controlled about an hour after it broke out shortly after 8 a.m.

No serious injuries were reported. Thousands of people on their way to work were attracted to the flames and smoke and dozens of fire trucks which surrounded the building. Police barricaded nearby streets to keep them away.

Fire Chief Andrew Casper said the fire was of a "suspicious nature." He said there were no employees working on the 14th floor, which contains Wells Fargo Bank offices, but "apparently someone was in there."

About 2,000 people were in the building when the fire broke out, sending smoke pouring into the upper floors and across the city's financial district.

Casper said people were evacuated from the four floors above and below the 14th, but the rest of the building was not evacuated. Fire fighters on the building's public address system told other employees to stay where they were.

Joe Darwish, an insurance company employee, said he had a bird's eye view of the fire from a building across the street.

"There was a little puff of smoke," he said. "Then it started pouring out like a chimney. Windows started breaking and papers were flying out the windows. It was a real mess."

Helicopters hovered around the building, on alert in case they were needed for roof-top rescues. "Everything worked well," Casper said. "It was lucky it happened when it did — early

morning," because flying glass and debris rained on the street below.

Casper said another fire broke out on the same floor of the building last summer. That one happened at noon, he said, and authorities had trouble clearing the streets below.

He estimated structural damage at a minimum of \$150,000.

Casper said the building was built in 1973, before sprinklers were required, and there were none in the area of the fire.

Firefighters had to break windows because the concrete and steel structure was "similar to an oven in there," he said.

He said firefighters put out the fire from the inside, because fire equipment cannot reach higher than the seventh floor on the outside. Most of the burning material was paper files and furniture, he said.

The spokeswoman said there also have been other fires in the building.

Sierra suit filed over radiation

Charges EPA not enforcing controls.

SAN FRANCISCO (UPI) — The Sierra Club has filed a lawsuit aimed at forcing the Environmental Protection Agency to comply with the law and establish controls over radioactive emissions.

The lawsuit, filed in federal court by the Sierra Club and two individuals, charged that the EPA is violating the federal Clean Air Act of 1972 by not regulating businesses that regularly emit radioactivity into the air.

The wide-ranging suit named businesses such as nuclear power plants, industrial plants, medical facilities and mineral mining operations such as uranium mines.

The suit asked the court to order the EPA and its administrator, Anne Gersbach, to establish and enforce standards for regulating the emission of radioactivity.

The suit charged that the EPA administrator added radioactive elements called "radionuclides" to a list of hazardous substances on Dec. 27, 1979, and then violated a statute of the Clean Air Act that directs the agency to propose emission-regulation standards within 180 days of the Dec. 27, 1979 date.

Michael H. Shuman of Stanford and Richard Sextro of Albany, Calif., the two individual plaintiffs, joining the Sierra Club in the suit, said they live and work near several San Francisco area emitters of radioactivity.

The Sierra Club has a list of emitters in the Bay Area and (Shuman and Sextro) both live near a number of these," said Roger Beers, one of two lawyers representing the plaintiffs.

Woman saw a friend set house on fire

COSBURG, D'ALENE (UPI) — An elderly Post Falls woman said Wednesday she was standing over the breakfast dishes when she looked out her kitchen window and saw a man she'd known for 20 years set fire to a nearby house.

The man Martha Kamp claimed to see, 57-year-old Charles "Buck" Switzer of Post Falls, is on trial for first-degree arson for allegedly setting fire to a vacant Post Falls house last November.

In the first day of the trial in Idaho 1st District Court, Mrs. Kamp said Switzer "walked over to the (crawl space) beneath the kitchen window, crouched down, took the cover off, did something — it didn't take but a matter of minutes — and he put the cover back on and left in a hurry."

Moments later "a puff of smoke" appeared from the crawl space, she said, and flames began coming up the side of the building.

"I picked up the telephone," she said, "I walked the phone. I cried. I didn't know what to do."

"I shook my head because I knew it was a matter for the police and fire department. Knowing 'who the arsonist allegedly was,' I didn't want any part of it, but I just couldn't stand by a let a house burn."

She told jurors she called the Post Falls police and told the dispatcher, "You'll never believe this, but I just watched a man set fire to the house across the street."

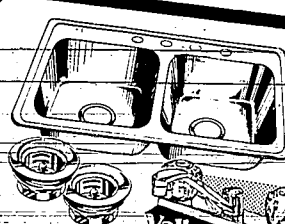

Firefighters extinguished the blaze in short order, Deputy Kootenai County Prosecutor Peter Erbland told the jury in opening arguments. Switzer appeared at the scene about 20 minutes after firefighters arrived, wearing a different hat and jacket, Erbland said.

The defendant remarked to crews at the scene, "Hmmm, smells like a gasoline fire," Erbland said, although none of the firefighters smelled gas. Erbland said investigators eventually found a partly burned plastic container in the crawl space, he said, which contained "a liquid." He said jurors would be able to smell the liquid to determine for themselves what it is.

Erbland said Switzer apparently had monetary interest in the rental house and the building was insured.

The trial was scheduled to resume today.

Haig takes anti-Soviet word to Asia

MANILA, Philippines (UPI) — Secretary of State Alexander Haig carried his anti-Soviet strategy to the Philippines Wednesday.

A senior American official said Haig believes the non-Communist nations in Asia have already formed a consensus against the Soviet Union.

Reporters aboard the plane carrying Haig from Peking to a meeting of the Association of Southeast Asian Nations were told that the United States does not want to take the lead in an Asian effort opposing any military threat from Moscow.

The ASEAN conference which opened Wednesday included ministers from Indonesia, Malaysia, the Philippines, Singapore and

Thailand who hoped to press Vietnam to withdraw from Cambodia.

A senior U.S. official said Haig believes the Asian non-Communist nations were ahead of the United States in recognizing the danger posed by the Soviet Union and its allies.

The official said, "It's not necessary to form a consensus. It was already there."

The official said the Asian nations should supply the leading edge of any anti-Soviet coalition in Southeast Asia and while the United States will be sympathetic and supportive, it will not take a leading role.

Haig was scheduled to spend most of his first day in the Philippines

visiting war-cemeteries. He had planned to fly by helicopter to the World War II island fortress of Corregidor but the trip was canceled because of bad weather.

He was also to meet Philippine President Ferdinand Marcos, who was just re-elected.

Some American officials believed the voting was an embarrassment to U.S. hopes for a more democratic system of government in the Philippines.

Haig will also meet later with the foreign ministers of ASEAN before flying to Wellington, New Zealand for a meeting of ANZUS, an alliance of Australia, New Zealand and the United States.

The single-theme running through all of Haig's stops in Asia is basically the same one that he used in his Middle East tour in April.

He stressed then that countries which may have differences between themselves have a common interest in opposing military advances by the Soviet Union.

Officials said Haig will use the same argument in Manila.

Now you know...

Taiwan raps United States for arms trade with China

TAIPEI, Taiwan (UPI) — Taiwan Wednesday assailed the U.S. decision to lift restrictions on arms sales to China.

However, officials praised President Reagan's pledge to provide the Taipei government with "defense equipment."

"We are deeply concerned over this unfortunate decision to sell arms to China," because it is not in the interest of the peace and stability of East Asia and Pacific region," a Foreign Ministry spokesman said.

Secretary of State Alexander Haig announced the decision to lift U.S. restrictions on the sale of arms to China Tuesday at the end of a visit to Peking.

"We see no benefit but harm out of this to both the United States and the other free nations in this region," the spokesman added.

But government spokesman James Soong praised Reagan for his comment that his administration intends "to live up to the Taiwan relations act."

Reagan told a news conference in Washington Tuesday that "I have not changed my feeling about Taiwan."

"We have an act called the Taiwan Relations Act that provides for defense equipment being sold to Taiwan... and I intend to live up to... the act."

FRIED EGGS

A medium sized, incredible, edible egg is less than five cents at Swensen's this week. So for decimated, fighting-apart-grocery-budgerts-and-general-inflation-fighting, Swensen's suggest shifting to the "Fried Egg Diet". Two fried-eggs three times a day would only be \$2.10 per week per person. For variety Swensen's suggest alternating with fried bananas, which are equally inexpensive this week at Swensen's. (See description at right). P.S. 5¢ eggs are still only 5¢ each when they're scrambled, poached or boiled, and they can be used in omelettes, quiches, foo yung, egg sandwiches, egg muffins, etc.

59¢

FRIED BANANAS

In many countries south of the border people eat more fried bananas than fried eggs, which is because fried bananas taste great and also because bananas are cheap in those tropical "banana republics". If you had to pay a dollar for an egg and a penny for a banana, you might fry bananas too. Anyway, even if you refuse to fry bananas, this weekend is the perfect time to enjoy the worlds most popular fruit at Swensen's low South-of-the-Border price. Think about home-made banana ice cream banana splits, banana cream pie, fresh banana milk shakes, chocolate coated frozen bananas, fruit salad or jello with bananas, etc. etc.

Horoscope

Taurians find those new activities offer opportunity to profit.

GENERAL TENDENCIES: A day to think about what you want to do in the future, that is, new and different. Take the time to formulate long-range plans to have greater abundance in the days ahead.

ARIES (Mar. 21 to Apr. 19) Engage in a challenging venture you enjoy and make much progress. Enjoy the company of friends at pleasurable activities.

TAURUS (Apr. 20 to May 20) You can add new activities to your regular routines which could be profitable. Don't be so opinionated.

GEMINI (May 21 to June 21) You have a new plan that requires the backing of good friends, so be sure to contact them without delay. Express happiness.

MOON CHILDREN (June 22 to July 21) Try to be more active in public affairs and gain added prestige. Be clever in handling money matters.

LEO (July 22 to Aug. 21) If you make plans now for improving your position in life, you can easily add to your abundance. Think constructively.

VIRGO (Aug. 22 to Sept. 22) Study carefully how to handle responsibilities more intelligently in the future. Study new outlets that could be profitable.

LIBRA (Sept. 23 to Oct. 22) Good day to talk over your finest ambitions and ideas with associates and get the results you want. Show that you have wisdom.

SCORPIO (Oct. 23 to Nov. 21) Become more enthused about the work you have to do and get better results. Make new plans for the future.

SAGITTARIUS (Nov. 22 to Dec. 21) This is the right day to gain a most cherished aim. Do whatever will bring you closer to the one you love.

CAPRICORN (Dec. 22 to Jan. 20) Showing true loyalty at home can bring about the harmony that is needed there. Stop being so unsure of yourself.

AQUARIUS (Jan. 21 to Feb. 19) Plan just how to produce more and increase your income in the future. Side-step one who could get you in trouble.

PISCES (Feb. 20 to Mar. 20) You have time to do things for the future. Take time and improve your property.

IF YOUR CHILD IS BORN TODAY... he or she will be mentally alert and can pioneer with success in various avenues of expression. Give the right kind of education, stressing modern ways of doing things. Don't neglect spiritual training early in life.

What's what

Individual frequencies in world of tomorrow

Suggests Isaac Asimov: "In the coming age of communications, where modulated laser light instead of radio waves will carry messages, there will be so much room for different frequencies that every human being might be assigned a special frequency that would be as much that person's as his or her telephone number is today." Expectation is that you will talk and listen to calls you send and receive worldwide on your pocket radiophone. Stand by.

Am told those warm-up entertainers who get the audience ready for the entrance of the star tend to work to the women. Make the ladies giggle, they say, and you'll soon put the whole crowd into a laughing mood.

CHECKERS

Q. Rarely do I hear anymore about checker players. Didn't checkers used to be the most popular board game in the country?

A. It did that. Hit its peak during the Great Depression of the 1930s when too many people had too little else to do. Theorists think they've since abandoned the game because they don't like to remember that part of their lives. Maybe so, don't know. It's no longer as popular as chess, that's certain.

Q. What was the longest golf putt on record?

A. A 120-foot putt by 12-year-old Bobby Jones. On Scotland's St. Andrews in 1928.

Q. How much wine in a magnum?

A. Two quarts.

O'CONNOR'S ENGLISH

When you hear what Carroll O'Connor does to the language in his role as Archie Bunker, you'd never guess he taught high school English in New York City for three years, would you? No doubt his writers would say you have to be pretty nifty with the language before you try to deliver such stuff on purpose. Anyhow, high school English in New York City isn't all that much, I gather.

Am told you can get ballpark ink out of just about anything if you repeatedly zap it with hair spray before you wipe it with a damp cloth.

A study of more than 500,000 missing persons cases indicates that murder was responsible in only one in 3,000.

That household item most frequently discarded in the spring cleaning is women's shoes.

Conservatives to gain in state redistricting

By CURTIS WILKIE
1981 Boston Globe

WASHINGTON — The Indiana legislature has never been confused with a Good Government laboratory, but the congressional redistricting plan passed last month by the Republicans who control the Hoosier statehouse is breathtaking in its raw exercise of power.

Using information compiled by high technology and drawing equally high district lines with the care of Picasso, the Republicans managed to put three incumbent Democratic congressmen into one district and to obliterate the district of another Democrat. "They moved it to Ohio," said one Democratic official.

The plan, which the Republicans hope will cost the Democrats three seats in the House, has brought shrieks of outrage. Rep. Floyd J. Pithman, the Democrat without a district, has called it an "abomination," and others are using less printable words to describe the Republican scheme.

However, a little history is in order in considering the ultimate ramifications of redistricting in Indiana. Ten years ago, the last time congressional district lines had to be redrawn, the Republicans controlled the process in Indianapolis. There was one district that had been "in GOP" hands for decades, and at one time had been represented by Charlie Halleck, the House minority leader in the days of the "Ev and Charlie Show" on Capitol Hill. In 1970, the Democrats had nearly won the district. So in order to make the area safer for Republican incumbent Rep. Earl Landgrebe — if not for democracy — several rural, conservative counties were added to the district.

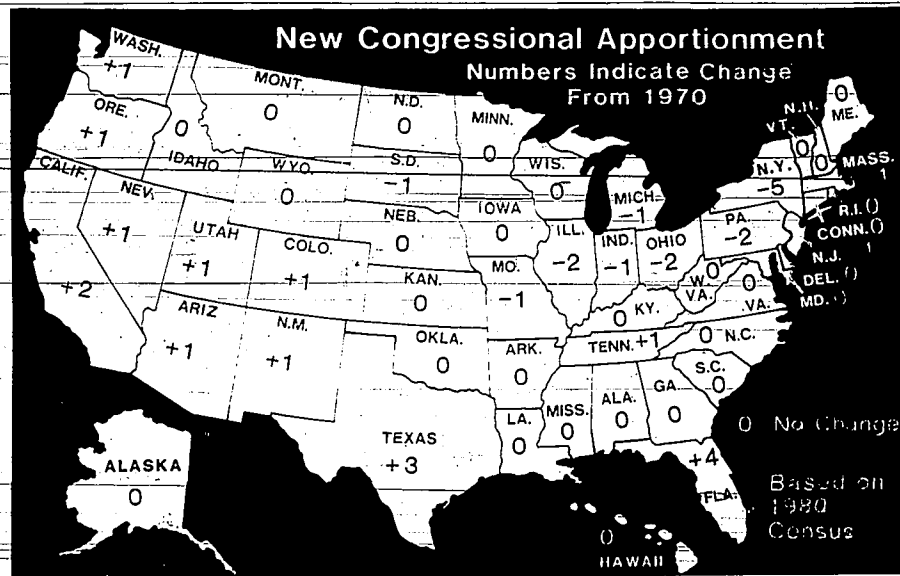

For all their plotting, the Republicans could not deal with the eccentricities of Landgrebe, who caused a small international flap by passing out Bibles during a congressional junket to the Soviet Union and later declared, just before Richard Nixon's resignation, "I'm going to stick with my president even if he and I have to be taken out of this building and shot."

The district was won by Pithman three months later, and the Democrats have been re-elected ever since. "It is a classic example of how redistricting is inherently political and, as such, is an inexact science. Though the law dictates that each district must contain a certain number of people, it does not attempt to define the boundaries in most states, this is left up to the legislatures."

Democrats control about twice as many legislatures around the country as do Republicans, but this will not necessarily translate into Democratic advantage. It will in Massachusetts, where the most likely victim of redistricting is Rep. Margaret Heckler, a Republican. But in states such as Florida, where much of the population growth is in the Democratic legislature or the Democratic governor to deny the Republicans new congressional seats.

In fact, the states that are picking up 17 House seats as a result of the census are in the South and the West, regions that are increasingly Republican. Most of the states which must give up seats because of a population loss are in the East and the Midwest, where the congressional delegations usually have a Democratic majority. Of the 10 districts that lost the most population over the last decade, all are urban Democratic areas and eight of the seats are held by blacks or Hispanics.

Thomas Mann, a congressional scholar associated with the American Enterprise Institute, says that Republicans will probably enjoy a net

Map shows how states will change in Congressional representation as result of 1980 census

gain or 15 seats next year through redistricting and their own party's revival nationally.

"I believe that redistricting — coming at a time when Republicans are already encouraged — will contribute toward a historic reversal," Mann says. "I don't think you'll see the president's party lose seats in 1982. The advantage in redistricting, the general psychology and the national Republican efforts will work against that traditional mid-term loss."

It may not result in Republicans capturing the House of Representatives, where they need to gain 27 seats for control. But it will contribute further to the conservative realignment in Congress, Mann says.

"The Republicans have been preparing for redistricting since 1976, when strategists began trying to win statehouse seats with an eye toward having friendly legislators involved in redistricting — the Republican National Committee spent \$250,000 last year developing its computer technology, and now has a professional staff of 25 in its redistricting office in Washington."

From her room dominated by a color-coded map of the 50 states, Maxene Fernstrom, director of the GOP Redistricting Unit, says, "We think that all things being equal, with (President) Reagan accepted and if the economy shapes up, we would see around a dozen Republican seats."

Meanwhile, the Democrats are still demoralized — disorganized and underfinanced after the setback last fall. Ann Lewis, recently installed as the Democratic National Committee's political director, says that the party has a chance of gaining seats in such states as Tennessee, California and New Mexico. She discounts the theory that the population shift to the Sunbelt automatically enriches the Republicans.

Martin Frankes, executive director of the Democratic Congressional Campaign Committee, concedes that

"it looks like we may lose 12 to 14 seats on paper," but he contends that there are many obscure factors that could affect redistricting.

Frankes said he would like to see Democrats be more aggressive on the state level, taking their text from the example of Indiana Republicans. But he says the Democrats are dogged by a concept that "the name of the game is preservation, not expansion," likening the party's approach to that of a football team sitting on a lead in the last quarter.

There are several other factors that make it impossible at this time to predict accurately the composition of the next Congress.

In the rush to stack districts with additional Republicans in order to defeat incumbent Democrats, the GOP has sometimes left their own incumbents vulnerable. In Washington, a plan drafted by the Republican legislature would have stripped House Majority Whip Tom Foley of part of his long-time constituency in Spokane, further jeopardizing the veteran Democrat who was re-elected with only 52 percent of the vote last fall. But the same plan weakened the hold of Republican Rep. Joe Pritchard elsewhere in the state. Pritchard appealed to his friend, Republican Gov. John Spellman, and the plan was vetoed last week.

Democrats believe that some of the Republicans who were barely pushed into office by the Reagan landslide will be dumped in an off-year election. Fernstrom disputes this on the grounds that it has been difficult for the Republicans to oust the "Watergate Babies," those young Democrats who were first elected in 1974.

Because the Voting Rights Act is applicable in a number of districts, final plans must insure minorities of the possibility of proportional representation. This may come at the expense of some white, incumbent Democrats, and Fernstrom says the

Republican National Committee would consider the unusual step of funding the cost of litigation brought by minority groups.

In states that must lose seats, legislatures might be inclined to carve up districts of retiring members or those incumbents who want to run for the Senate instead of saving congressmen who want to continue in office.

Given all these imponderables, here is a region-by-region report on the way redistricting looks today:

THE EAST

There is no real change necessary in New England outside of Massachusetts. New York still has a year to decide how it will dole out its loss of five seats — largest in the country. It appears now that the Democrats will give up three seats and the Republicans two, with one of the GOP casualties being John LeBoutillier, the irreverent young Long Island congressman.

New Jersey traditionally has been a Democratic stronghold, so it is likely that its legislature will assign its loss of one seat to a Republican. Pennsylvania, on the other hand, is

controlled by Republicans. The state must give up two seats — one in the Pittsburgh area and one in Philadelphia. The latter will probably be the office vacated by Rep. Richard Lederer, a Democrat convicted in the Abscam case. The Democrats will likely suffer the loss of the other seat as well.

THE SOUTH

Florida is the nation's biggest gainer with four new seats. There's a possibility that a new Cuban-American district will be created in Miami, and this is one of the few ethnic groups that tends to vote Republican. There was enormous growth in the middle part of the state, from Cape Canaveral on the East Coast to St. Petersburg on the West Coast, but Democrats feel confident that they will be able to salvage two of these three other districts to be created.

In Tennessee, it appears that the Democrats will pick up the new seat, but in Texas — where black and Mexican-Americans are squabbling within the Democratic Party over the spoils of three additional seats in that state — it looks like Republicans will

THE MIDWEST

Democrats face the loss of a seat in Michigan because of the falloff in population in Detroit. The same is true in Missouri, where the population in St. Louis shrank. If black Democratic incumbents in these cities are to be preserved, the sacrifice will have to come from white suburban congressmen.

Illinois loses two seats — one in Cook County (around Chicago) and another Downstate. Both are likely to be Democrats, and a bitter partisan battle is already developing in Springfield.

In Ohio, another highly partisan state, the Republican Party is joining in an initiative to take redistricting away from the caprices of a legislature where the Senate is Republican and the House is Democratic. The FAIR (Fair and Impartial Redistricting) movement would turn the job over to a bipartisan commission. Two seats must be given up in Ohio, and the districts that were the biggest population losers are now held by Democrats.

THE WEST

Republicans are expected to win new seats that must be created in such growing states as Colorado, Arizona, Utah, Oregon and Washington.

In California, where the Democrats control the legislature and Gov. Edmund G. Brown Jr. presides, it is conceivable that the district lines can be drawn so the Democrats win both new seats there. A party official said that some Democratic incumbents who were traditionally elected with a comfortable margin are willing to turn over some of their territory in heavily Democratic areas to other districts in hopes that additional colleagues could be elected.

However, much of the growth in California is Republican, and the GOP will probably end up with a split there. Nevada, nominally a Democratic state, will have two congressmen in 1983 instead of one. But Democratic Rep. Jim Santini may challenge Democratic Sen. Howard W. Cannon. In a primary next year, stripping the party of the incumbent's advantage in one House race and leaving the other race wide open.

On the other hand, South Dakota loses one of its two seats, negating the need for redistricting, but probably throwing the two incumbents — Democrat Tom Daschle and Republican Clint Roberts — into a race against each other for the remaining at-large seat.

Doc still makes house calls

KEZAR FALLS, Maine (UPI) — The weathered black bag plops down in the bedroom of a 3-year-old boy, whose mother found him "screaming and horrified" in the middle of the night.

"Aren't you glad to see me," smiles Dr. Paul Marston, 81, resting his still-steady hand on Brent Nelson's forehead. The stethoscope and thermometer come out.

"I don't think he's very ill," the doctor assures Nora Nelson. "Give him a half-teaspoon of this, but not on an empty stomach. If he's not all right, just give me a call."

The youngster known as "Bubba" or "B.J.," climbs grinning out of the bedcovers in white pajamas and blue socks.

"Mommy says daddy take me fishing now," he muttered. "I go get some big hooks."

Marston hops back in his car for a 20-mile mountainous journey to Fryeburg — where elderly sisters Mary and Florence Crowther await his visit. A 15-mile jaunt follows to a 97-year-old woman's house in South Parsonsfield.

"I cover an area of about 20-mile radius," said the doctor who's made house calls in western Maine for more than 40 years. "When people are sick and call at night I've got to go see them. What else are they going to do?"

They recently made a movie called "House Calls." And the movies is nearly the only place you'll find them these days. Unless you live in the towns surrounding the Ossipee River near the New Hampshire border.

A doctor works for the benefit of

his patients, and you can't do it without making house calls," said Marston, who now serves 1,000 patients.

Marston's offices lie upstairs from the living quarters of his modest white house in Kezar Falls, a sleepy village of some 2,500 people. Ye Olde Wool Shoppe sits next door. The public library, open Wednesdays only, stands across the street.

The doctor's bookshelf includes an 1883 edition of Gray's Anatomy. A 30-year-old wooden examining table graces the main office, where lollipops are dispensed to youngsters.

His wife Sylvia, 75, is baking the "first rhubarb pie of the season," using a wooden rolling pin.

"Present-day people are losing the dedication for their jobs," the doctor said as he drove to see another patient.

"The old-fashioned storekeeper would apologize if somebody asked for an item and he didn't have it," he said. "Now if you ask for an unusual item they say they haven't stocked it

since the war because they don't make any money on it.

"The old storekeeper had a philosophy of service, and it's the same way in the practice of medicine."

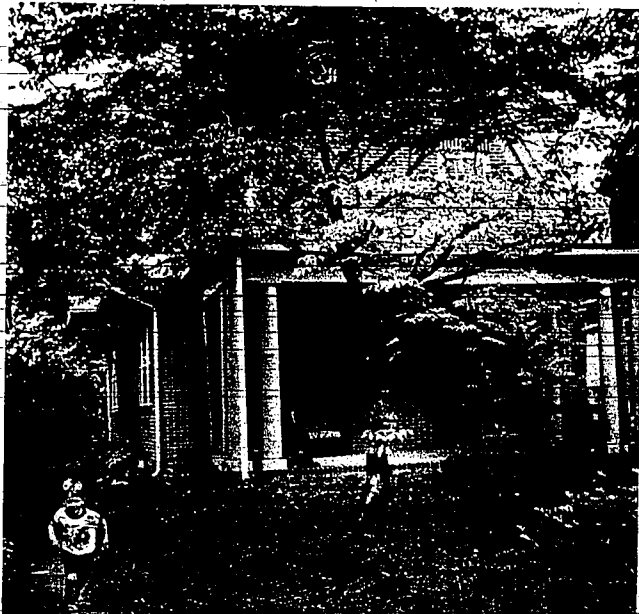

The steep, winding road to Verna Boland's house is treacherous in Maine's snowbound winters. No problem for Marston, who enjoys the scenic view of the White Mountains in all seasons.

"Being a country doctor is a challenge and I don't want to be in circumstances where I can't meet it," he said. "I also have a four-wheel drive vehicle."

Mrs. Boland, 97, suffering from a form of cancer, stays in bed most of the day. Her large garage had many years ago been a dancehall called "The Maple."

"I can't walk too good now," she said. "I was a live wire all my life. We used to do all types of dances — old-fashioned dances like waltzes and two-steps."

The doctor examines her shoulder, pats her dog "Georgie" on the back, and bids farewell.

House in Trenton, N.J., bought under city's urban homestead program

Used for inner city rehabilitation

Budget cuts threaten homestead program

By D.J. ROSENBAUM
United Press-International

As settlers in the Old West staked their claims to wilderness lands by right of occupancy, settlers in inner cities are reclaiming abandoned homes through "urban homesteading."

But one of the federal parts of the plan is in danger because of budget cuts. A \$230 million loan program has been frozen and slated for elimination in fiscal 1981-82.

"It's a horrendous blow," said Martha Lamar, New Jersey's chief of the Bureau of Neighborhood Preservation. "It was just unbelievable. It's just a very important tool for inner-city rehabilitation. Homesteading is going to be very tough."

There are two parts of the federal government's homesteading program, explained Cathy Chenez, an official of the Department of Housing and Urban Development. The so-called "810" program gives federal

property to local governments in 94 cities, mostly in the East and Midwest — although Dallas also is included.

Houses become "810 properties" on which federally guaranteed mortgages are foreclosed. That program is healthy, Ms. Chenez says; it has cost \$55 million from 1975 to 1979 and is still running on its 1979 appropriation.

But 23 cities use federal loan money called "program 312 money" to rehabilitate both federal and local homestead property. That money is gone — frozen with almost no notice earlier this year and almost sure to vanish in the coming fiscal year.

Programs vary from city to city, but the basic aim is the same: to get people to buy, live in and pay taxes on abandoned homes.

The 312 loans are for 20 years in amounts of up to \$27,000 at the unheard-of low interest rate of 3 percent.

Since the houses generally go for just hundreds of dollars — at most, a couple thousand — the essentially free money lets people with low enough

income and good enough credit hire contractors to renovate the abandoned homes.

For example, in the Trenton, N.J., program, which Ms. Lamar called a "very good one," the catch is that an owner must correct all building and health violations within two years and must live in the house for at least five years.

Ed and Audrey Weir bought a homestead in Trenton last year. It was not really a typical homestead. The house, in a borderline neighborhood, cost \$10,000 at auction, far above average. The house also is bigger than a standard homestead property. But their motives for going into the homestead process are about the same as for many such people.

"I've been to the Trenton auctions," Ms. Lamar said, "and they're reaching everybody. They're available to everyone who's willing to do the work and pay back the loan."

The Weirs did not have to homestead to buy a house, but "it wouldn't have been much of a house" otherwise, said Ms. Weir. "We could

have afforded a \$30,000 home, which would have been a row house, and we'd have been looking for another house immediately — it would have been too small."

"For \$40,000 (their \$10,000 to buy HUD's \$27,000 loan and \$3,500 more in the Weirs' money to renovate), we got a \$60,000 home," she said. "In any other neighborhood it would be worth more, but because it's in a marginal neighborhood..."

"We are gambling that the neighborhood will stay status quo for five years."

Children with alcoholic parents — pain, scars run deep

By LINDA MATCHAN
© 1981 Boston Globe

More than 20 million children in the United States have at least one parent who is alcoholic.

For many of these children, life is frightening and confusing. They may feel alone, hopeless and helpless. They may be terrified that the drinker will become sick or be injured in an accident, or even die. They may feel guilty because they can't prevent their parent from drinking, or resentful because their parent just won't stop.

Often, they are embarrassed by a drinking parent who may be unpredictable, unkempt, confused, irritable, moody, perhaps shaky or bleary-eyed.

At times, the children's lives may seem "totally derailed," according to psychologist Judith Selks, associate-director of the Boston Center for Alcohol and Health, Selks, who has counseled children of alcoholics for 12 years, is the author of a book for teenagers called "Living With A Parent Who Drinks Too Much."

When they grow up, she said, there always may be some residual pain, some scars. They may feel as though they're different from other people — a feeling that was reinforced if the parents warned them never to tell anybody about the drinking.

As adults, some may have trouble forming friendships; they may feel no one can be trusted since one or both of the adults to whom they were closest as children could never be relied on. Some may, in adulthood, have trouble seeking projects from start to finish because, in their household, adults "didn't finish anything," Selks said. "The alcohol got in the way."

Some children of alcoholics may go on to develop drinking problems of their own because they unwittingly imitate the drinking habits of their alcoholic parent, or, as some researchers believe, because they have a genetic predisposition to alcoholism. (An estimated 50 to 60 percent of all alcoholics have at least one alcoholic parent.)

But, she said, there are many success stories among children who grow up in families with alcoholic parents. "I don't know if there's any way of knowing how many there are, but it's not uncommon for these people to grow up and lead happy, constructive lives."

Many children of alcoholics turn to Al-Anon, a peer support group that teaches people with alcoholic parents, relatives or friends about alcoholism and how to cope with it. Here they can remain anonymous — only first names are used — but at the same time, they receive the support and comfort of their peers.

Marilyn, 16 (she prefers not to use her real name because she wants to protect her family), says she has been helped tremendously by Al-Anon. She says her father, a truck driver, has been an alcoholic for as long as she can remember.

His drinking tormented the whole family. "We became part of the disease," said Marilyn. She and her sisters were always on the alert for bottles — in the car, in his bureau

drawers, in the bathroom. If they found liquor, he'd deny it belonged to him and tell them they were crazy. "He'd say, 'You'll end up in an insane asylum.'"

The sound of his car in the driveway would set off a furious chain of reactions inside the house: "Was he drinking again? (He was trying to disguise the liquor on his breath.) Was there spit on the side of the car? (He'd been brushing his teeth while he was driving.) Was he eating peanuts? (He'd been snoring.)"

"Your life would stop the minute he came home."

Sometimes when he drank, he'd become violent: once he whipped her so severely with his belt, she said, "there was blood on the wall."

She thought she might be afraid of her mind with anger and fear. "You're always hoping for tomorrow. Tomorrow it will be better."

About five years ago, someone told her about Al-Anon. She'd been attending Al-Anon meetings, and she said she'd taught her how to live with her father. She no longer feels she has to wait for her father to stop drinking before she can be happy. Above all, it has helped her realize alcoholism is a disease she is powerless to stop.

"For so long, I hated his guts. Now I can see him as a sick person. I can have a little more compassion for him."

She adds: "There's the hope now. There's always someone there. The big thing in Al-Anon is that you're with other kids your own age who have lived through it and can really relate to it."

Even though her father is still drinking, Marilyn believes her story is, in a sense, a success story. She is happier, she no longer feels alone and no longer takes responsibility for his drinking. "I have something to fall back on, something solid. And one happy person in the family, she says, is better than no happy person."

Cathleen Brooks is the pseudonym used by a 26-year-old California woman — a former reporter for the Los Angeles Times — who has just written "The Secret Everyone Knows," a book for children and teens about the "secret" in her upper-middle-class suburban home. Both her parents were alcoholics.

While she was growing up, she wrote, she felt scared and vulnerable and a little sick all the time. Her parents were always busy, sick or asleep. There were family fights — "horrible yelling late at night in my parents' bedroom" — and she could never decide whether her parents would be in a good mood or a bad one.

Though outwardly her family had all the trappings of a perfect home life, "my parents weren't there for the simple things. They never went to PTA meetings. I never told them about PTA meetings. I was afraid they'd do something embarrassing."

Ashamed, she began to lie about her family, telling her friends that the reason she couldn't invite them to her house was that her mother was dying. Sometimes she'd say she was an orphan.

"I hated the truth about my life," she wrote, adding in a telephone interview: "I never knew alcoholism

was a disease. I thought they drank so much because they didn't like me." She thought that she could please her parents by excelling, so she worked at being the most popular girl in school, the best academically. Even as an adult, she said, she felt she had to have the best job and be the best at her job. "At the heart of it all was the feeling that nothing I did was good enough."

"People who are living in this (alcoholic) environment are living in a literally crazy world. My father was a very successful man. I wanted to believe he was infinitely respectable."

Yet when this same man is sleeping on the floor or stumbling down stairs, how do you deal with that? What an incredible conflict! As she grew older, Brooks said her inner life became even more painful and confused. "I had a wonderful record as a career woman, but I didn't have a great relationship with people. I couldn't trust. I'd learned very quickly that it's not safe to love very much."

Like many children of alcoholics, she turned to alcohol to dull the pain, drinking whatever she could, whenever she could.

"Alcohol," she said, "is a great painkiller. When I drank, I felt pretty. I felt powerful. When my parents drank, they screamed at each other and at me and made fools

themselves. I determined that there was something wrong with my parents' drinking, and not with mine."

By age 22 she, too, had become an alcoholic. Yet, four years later, she is able to say: "I've never felt so successful in my life."

Three years ago, her father, who lives on the East Coast, became so ill from the effects of alcohol that his family persuaded him to go to Alcoholics Anonymous, an organization for alcoholics seeking to recover. He stopped drinking, and a year later he came to California to visit Brooks. It was the first time she had seen him sober, and she was so amazed by the change in him, and curious to see how it had happened, that she accompanied him to an AA meeting. There, she acknowledged for the first time that she, too, was an alcoholic.

She took her last drink in February, 1979. Since then, her mother has stopped drinking, too. But another major success in Brooks' life is that she has finally shared her "secret" and ended the isolation alcoholism imposed on her life. "It is the silence and the shame that does you in," she said, adding she has enormous regrets that she waited so long to confide in someone — a teacher, a counselor, a friend, anyone.

"Somebody hopefully would have

had the good sense to explain to me that this was beyond my control."

Alcoholics Anonymous encouraged her to talk about the drinking problem in her family and about the feelings she had kept so deeply suppressed. She said she's finally learned to trust people — "I have friends who know all about me" — and she now understands why she was driven, all her life, to prove that she was a success. She has married, left the newspaper business to work as a freelance writer and consultant on alcoholism, and is happy.

"I feel terribly successful. I'm not making as much money as I was, but I'm doing what I want to do."

If there is a common theme in the diverse stories told by children of alcoholics, it is that talking about the family-alcoholism problem — sharing it with others — is a critical part of the coping process. Alcoholism, as the son of two alcoholics put it, is a disease of denial. Family members — and so ashamed of the problem that they find it difficult to disclose or discuss it. But professionals and children emphasize that the only way for children to relieve their feelings of guilt, sadness and despair is by talking about them.

With professional help, the aid of Al-Anon, or even the listening ear and support of a close friend or relative, children of alcoholics can eventually forget the pain and turmoil of their youth and get on with their lives, psychologist Selks says. An objective listener not only can provide support and comfort, but also can help the child realize that the alcoholism is beyond his or her control.

She said it's important for them to realize they shouldn't wait for their parents to get over their drinking problem before they get on with their own lives. "They have to get on with their own thing, so they'll have some good feelings about themselves." Success, she said, means learning to cope with alcoholism in the family.

She added that many of these children actually derive some benefits from their tumultuous childhood. "They learn coping skills. They've learned how to manage themselves and other people (because) they had to learn how to make the family work, and to keep the peace."

One 31-year-old man spoke for many when he said he began to emerge from the deep depression his parents' alcoholism imposed on him only after he began to share his unhappiness with others. He started to attend regular meetings of Al-Anon, a support group for friends and families of alcoholics.

Before he began going to Al-Anon, he said, he felt tremendously guilty that he hadn't been able to stop them from drinking.

Hurstville is a dying company city for sale

HURSTVILLE, Iowa (UPI) — TOWN FOR SALE: Quaint Jackson County community with tiny tavern, city hall, farmhouse, red barn, cropland and pastureland. Extras include four aged limestone kilns and quarry.

"Good" investment. Contact: Six Maquoketa businessmen who can tell you why.

They've "owned" the tiny, incorporated eastern Iowa town of Hurstville for 60 years. Now they're selling it and hoping for lucrative returns.

"I think acreage in Jackson County, Iowa, is a good investment," said part-owner Robert Osterhaus. "I think we'll make a profit on it."

The six men formed a corporation and bought 650 acres of the town, located just north of Maquoketa in eastern Iowa, for \$567,000 in 1977. The land was owned by the town mayor, Laurel Summers, who inherited Hurstville and just about everything in it from his wife, a granddaughter of founder Alfred A. Hurst.

Hurst, an English stonemason who came to the area in 1870, built wood-fired kilns to produce lime and then constructed homes and businesses for his employees. At the turn of the century, the settlement was one of two major suppliers of lime in the state.

But times have changed. The crumbling, limestone kilns abandoned some 60 years ago after Hurst died — are overgrown by weeds and brush. The farm buildings are weather-beaten and decaying. All of the houses except two have been

demolished. Most of the town's 34 residents own land just outside the old Hurstville.

"The town, now nothing more than a wide spot on Highway 61, is for sale."

"We bought it as an investment, not knowing what we'd do with it," said David Schoenthaler, a Maquoketa attorney. "There were no zoning restrictions, so I had industrial, housing and farming possibilities. We had an engineering study done on land use, and came to the conclusion we needed to sell it off."

The six tried selling it as a package for \$1.4 million, but had no takers. So they started selling it piecemeal in 1979. Most of the sales have been in farmland.

Hurstville's "downtown" — a bar and grill and a vacant, 100-year-old city hall — is still up for grabs. So are the kilns, 300 acres of farmland, 40 acres and just about everything in it from his wife, a granddaughter of founder Alfred A. Hurst.

The owners have offered to give the kilns away in the name of historical preservation. However, not even the Jackson County Historical Society has enough money to restore Hurstville's deteriorated landmarks.

"After we sell the tavern, red barn and that area, we will have sold on contract a sum almost equal to what we paid for the whole thing," Schoenthaler explained, adding they hope to double their investment when they sell the 300 acres.

Mayor strikes his own city

HARRISBURG, Ill. (UPI) — John D. Cummins is on strike against the city he also serves as mayor.

Cummins, mayor of Harrisburg, a town of 8,200, walked the picket line for five hours Tuesday as an employee of one of three departments striking over a contract dispute.

He is an employee of the water department and a member of Local

318, International Union of Operating Engineers, whose contract with the city expired April 30.

Cummins said the strike would not prevent him from carrying out necessary duties as mayor, including presiding at a regular meeting of the City Council Tuesday night and leaving the picket line to conduct necessary city business.

Women altering image of professional politics

By ARNOLD SAWISLAK
United Press International

WASHINGTON — The word "politician" may still evoke the cartoon stereotype of a leechy, cigar-smoking man barking into a telephone in a cluttered backroom office.

But like many such images in a changing society, it has been overrun by reality.

"Politician" today also means Ann Lewis, Nancy Sinnott and Daryl Glenney, none of whom will be found puffing a cheap stogie or chewing out ward heelers. More likely, these women will be scanning the computer readout of an attitudinal survey, or darning up a hundred or so telephones for a voter blitz or advising a candidate for Congress how to clean up his act.

They are three of the best and the brightest among a growing number of women who have broken into the traditionally male-dominated field of professional politics.

They are not, of course, the first women in the small world of campaign management and political organization.

Women have been key figures in campaigns for some years. In 1972, Jean Westwood took over the gavel of the Democratic National Committee, the first woman to preside over a major U.S. political party. Two years later, the Republicans caught up, electing Mary Louise Smith chairman of the GOP National Committee, a post she held for three years.

Both of these women were fully qualified to head national political parties, moving up after many years of experience in both state and national campaigns and intraparty organizational work.

But because neither had made a living at politics, both probably were regarded more as hardworking talented amateurs than as professionals.

Three top pros

Lewis, Sinnott and Glenney are anything but amateurs. They are very different people and sometimes competitors, but the attitudes and knowledge they hold in common make clear that they also are colleagues in a very specialized line of work.

Ms. Lewis is political director of the Democratic National Committee, in charge of both of the party's campaign work and its internal political process, such as national convention delegate selection. She is the first to handle both of these areas for the national committee.

Miss Sinnott is executive director of the Republican Congressional Campaign Committee, the organization that works directly with both GOP incumbents and challengers for Democratic seats in the battle for the House every two years. She moved up to the job after two years as the committee's political director.

Ms. Glenney is a free lance political consultant — a "hired gun" in the parlance of the trade. She also is president of Campaign Works, a bipartisan consortium of professional politicos who help companies, associations and unions to train their staffs and members in campaign techniques.

There are many more women in professional politics — including a number who are associated with Ms. Glenney's Campaign Works — Susan Bryant, political director of the Senate Republican Campaign Committee; Nancy Bratton, a Minnesota state senator who helped elect the first GOP governors of the century in Texas and Louisiana; Jill Buckley, several of whose 1980 congressional clients were among the few Democrats in the nation to stem the GOP tide; Linda DiVall, a top Republican researcher and pollster; and Mopsi Fahy, whose issues and survey work helped elect two GOP senators and two House members in 1980.

Nancy Sinnott one of best women in professional politics

Ann Lewis is the veteran of this group and perhaps the one who can best say she has politics in her blood.

"I never wanted to do anything else," she said in an interview. "I started giving out pamphlets for Adlai Stevenson (in 1952) when I was in high school in Bayonne, N.J."

Married and living in Miami, she canvassed for John F. Kennedy in 1960 and four years later ran a campaign office for Lyndon Johnson and worked for Rep. Dan Rostenkowski, D-Ill. In 1966, she helped her husband, Gerald, launch his own political career in the Florida legislature. (They are now divorced; he is now Florida secretary of state.)

She went to Boston in 1968 and worked for Robert Kennedy for president and Kevin White for mayor, later joining White's staff. In 1970, her brother, Barney Frank, ran for the Massachusetts legislature and she helped.

She also worked for Frank in his 1980 campaign for the House seat vacated by Rep. Robert Drinan, D-Mass., although she was busy with Rep. Barbara Mikulski's Maryland re-election effort.

"How could I not?" she asked. "He's my younger brother. I remember when my mother brought him home from the hospital and said, 'The kid wants to be in Congress.'"

Both Frank and Mikulski won. In 1972, her presidential campaigns were for Edmund Muskie and George McGovern. In 1973, she helped Maynard Jackson become the first black mayor of Atlanta, and the next year ran Rep. Mikulski's unsuccessful campaign against Sen. Charles McC. Mathias, R-Md.

In 1976, she was in the Birch Bayh presidential effort and in 1980, worked for Sen. Edward Kennedy. In 1981, when Charles Manatt took over the national committee, he selected her as political director.

Nancy Sinnott grew up in the

post to run Republican Arthur Mason's losing 1976 campaign against Drinan. (A tough assignment — it took an order from Rome to dislodge Drinan, a Jesuit priest, in 1980.)

She joined the field staff of the GOP congressional committee in 1977, moved up to political director in 1979 and took over the top job in January of 1981.

Daryl Glenney

Daryl Glenney is the late bloomer among the three. Born in California and educated at Stanford, she moved to Washington with her reporter husband and their two daughters in the mid-1960s.

When the marriage broke up, she tried free lance writing and in 1974 Matt Reese, the grand old man of Democratic political consultants, gave her some work for the Democratic National Committee.

The next year, she joined the new Federal Election Commission as director of special projects. She returned in 1977 to Reese, working in Sen. Claiborne Pell's 1978 campaign and a successful effort to beat a right-to-work law in a Missouri referendum.

In 1979, she met and married another political consultant, Sandy Overbey, and they set up their own firm in Kansas City. She worked on Democratic gubernatorial campaigns in Texas, Kentucky and Louisiana and in 1980, ran Mary Gajack's challenge to Sen. Paul Laxalt in Nevada.

Glenney, Reese and Republican campaign expert Eddie Mah Jr. created the Campaign Works, which has conducted employee political education programs for Standard Oil of Indiana, the National Association of Realtors and others.

Network knows

Ms. Lewis, having been at the practice of politics longest, has the clearest idea of when women first began gaining professional respect in the field.

Her first campaigns were all volunteer — "I was a respectable married woman. Respectable married women did not work for money" — but when she became single again and chose to earn her living in politics, credibility was a problem.

"I think it changed around 1975 or 1976," she said during an interview sandwiched between appointments in her national committee cubbyhole office. "Until then, I really had to prove myself." In Boston, the change came when local politicians saw what she could do. "After two campaigns, everybody knows who you are and how good you are."

Miss Sinnott put it much the same way: "You get to know the network and the network gets to know you." She also credited the chairman of the campaign committee, Rep. Guy Vander Jagt, R-Mich. "He really supported us."

Ms. Glenney also saw a "change in the climate." She said, "I had a hard time being believed, having sufficient credibility" in her first campaigns, "but that changed as my credentials were established." Still, she said she found women candidates frequently "like to have men tell them what to do."

The difference

Ms. Lewis and Glenney believe there is a difference in the way women approach politics: Miss Sinnott thinks the lack of difference is a sign that women have achieved a level of professionalism that equals male expertise.

"I suspect there are differences," Ms. Lewis said. "I am used to working with fewer resources because the history of women's campaigns has

been one of fewer resources." She also sees a difference in outlook: "Whatever job I do, I buy the groceries; I do not have any insulation between me and food prices. I don't need the Department of Labor to tell me every four months what is happening to the cost of living."

Ms. Lewis also is a warrior — "After all, I'm the mother of three daughters, I even worried about Lyndon Johnson winning in 1964."

Glenney added another perspective: "I'm not getting that there is more direct contact from the background of a volunteer who is conscious of the work involved in a campaign. I think women are less likely to delegate work and then walk away from the project."

Said Miss Sinnott: "I really don't think there is much of a difference. And I think that in itself is a difference in that a professional in this field is someone who approaches and executes and does a good job professionally." She said "there are a lot of techniques you must master," but also have "a feeling about the process."

GOP technology

All agree, however, that there is a difference in Republican and Democratic campaigning.

Glenney: "Republicans make much better use of technology. They run campaigns in a much more

Justice study: Judges must simplify instructions to juries

By RICHARD CONNOLLY
© 1981 Boston Globe

Jurors understand only half of what a judge tells them when he delivers his "charge" or instructions of law after the presentation of evidence, according to a Justice Department-sponsored study.

There is little doubt, the researchers said in a statement released recently by the Justice Department, that jurors sometimes arrive at a compromise verdict in a felony trial because they do not fully understand the judge's instructions.

The project recommended that judges simplify their instructions to the jurors about laws governing a particular case and that a manual be compiled to make it easier for judges to address jurors in terms they'll understand.

Referring to what they describe as

"lawless verdicts," the researchers said there is a high probability that many jury verdicts reflect a misunderstanding of the jury's role, their individual beliefs about the facts in the case and what the law requires.

Entitled, "Making Jury Instructions Understandable," the project was financed by the Justice Department and the National Institute of Mental Health. It was handled by the Psychology Department at the University of Nebraska.

One test involved the use of 34 volunteer jurors who read the instructions from an actual trial of someone charged with attempted murder. Only one juror could explain the difference between the highest and lowest charge against the person on trial.

The researchers said they found that by simplifying the instructions in a judge's "charge" the level of jurors' comprehension could be raised to 80

percent or higher from about 51 percent.

It is also helpful, the study showed, if the jurors are given copies of at least some of the instructions delivered by the judge before testimony begins so they will know if the evidence presented to them is relevant.

It is the usual practice for judges to warn jurors not to discuss a case while testimony is being offered in court.

When jurors go into the jury room after hearing testimony, they are allowed to take with them only the exhibits of evidence—for example the gun used in a shooting, the knife used in a slashing, books and records in a case of fraud. They must rely upon their memory as to what instructions the judge gave them about the relevant law in the case and about the testimony of witnesses.

If they have difficulty recalling

what the judge told them, the foreman of the jury can send a note to the judge requesting that he address the panel again to further explain the law.

Usually the courtroom becomes sacrosanct while the judge is instructing a jury. No other event in the judicial process seems more important. For example, court officers guard all doors. No one may enter or leave while the judge is addressing the jury, even if someone has a dire need to use a toilet.

The situation is unlike that in other instances when the public can move in and out of a courtroom while witnesses are testifying.

Experienced reporters and long-time court observers hardly ever get trapped in a courtroom when the judge is ready to charge a jury because it means he or she cannot leave until the judge is through talking, which could mean an hour or two. The judge's charge rarely makes

news because it is so technical. In the attempted murder case presented to the volunteer jury during the research project, jurors showed an average comprehension of 51 percent. After the judge's instructions were re-written, a second test showed comprehension of 66 percent. Another rewrite of the judge's charge increased the comprehension level to 80 percent. With two more cycles of testing and writing, the study report said, the comprehension level could be raised to 90 percent or better.

In a simpler case involving burglary, volunteer jurors scored 65 percent after hearing the original instructions by the judge and 80 percent after a rewrite, or simplification of the judge's charge. Younger jurors were the sharpest and most able to comprehend what the judge told them; the project showed jurors 60 years old or older—a "significant" proportion of all jurors—had a much lower comprehension level; the study showed.

Women

Continued from Page B5

structured, more business-like way." Sinnott: "We see ourselves as a research center, as a training center. We think it is our job to offer the best training programs for candidates, as well as for campaign managers and staff, to have research services, legal services, financial information and baseline information available for every Republican running for the House of Representatives."

Lewis: "I think we have to assume that their apparatus will be larger than ours. Fortunately, I think we are smarter—and harder working than they are, and even more importantly, we have an ally in the Reagan Stockman budget. It has been my experience that no matter how good your phone bank is and how big your computer is, if you're not for the right things—the things the voters want, you're not going very far."

It is not likely that the rise of women in professional politics will end the aggressive "attack campaign" tactics that have characterized U.S. politics in recent years.

"Campaigns are nothing more than pointing out differences," Miss Sinnott said, adding that "both negative strategy and positive strategy" are needed to give voters the information needed to make their choices. She said Democrats, while holding power, "bemoan the attack campaign, but I can recall in 1974 and 1976 they were effectively attacking Republicans."

Ms. Lewis, who is extremely critical of the President Reagan and Budget Director David Stockman for their budget cutting proposals, said attacks in that area "is telling the truth—I'm not saying either one of them are bad people." She said "personalizing the issues and evoking negative stereotypes" was the kind of

campaigning she opposed. Ms. Glenny, who is not tied to either party now, said she expected "a lot more" negative campaigning from the Democrats in the near future. "The Republicans do it very well." She also cautioned both to avoid going overboard, suggesting that is "what Democratic challenger Alex Selth did to blow a lead in his 1978 campaign against Sen. Charles Percy, R-Ill."

Campaigns well done

Professionals seldom find perfection, but frequently have a memory of jobs well done. Ms. Lewis and Miss Sinnott recall campaigns and candidates that approached the ideal.

"Barbara Mikulski comes very close," Ms. Lewis said. "She is a great campaigner. She has a real genius for speaking in a way that people understand immediately and

know that she shares their concerns.

After her comes my brother," Miss Sinnott said. Rep. John Hiller, R-Ind., who upset veteran Democrat John Brademas last year, ran a near perfect campaign: "That was a great story, a sort of David and Goliath. They had a tremendous organization and they did almost everything right. They must have, to beat John Brademas."

Ms. Glenny's favorite campaign was the Missouri right-to-work battle. She said when Reese went into the state polls showed the right-to-work initiative leading 60-30, with 10 percent undecided.

Using carefully constructed "targeting," and very little television, the opponents turned the issue around and won 60-40. Supporters of right-to-work "didn't know what was happening until the returns came in," she said.

Orval Faubus still revered in Arkansas

Thursday, June 18, 1981 Times-News, Twin Falls, Idaho B-7

Former governor believes history will vindicate his 1957 desegregation role

By ELLEN DEBENPORT
United Press International

LITTLE ROCK, Ark. — Orval Faubus moves slowly into the cluttered office he shares with two others above a small publishing firm.

His handshake is dry and cool; his brown eyes milky. He seems shorter than at earlier meetings.

Slumping a little in the hard green office chair behind his desk, the former governor begins quietly to answer questions. His health is all right, for age 71. His memoirs are selling well. He is happy in Houston, his new home.

Faubus is almost monosyllabic until the subject turns to the crisis that catapulted him to the governorship of Arkansas in 1957. Soon he is leaning forward, gesturing, pounding his desk. His voice is vigorous, and some of the lines in his face disappear.

He remembers every detail of 1957. He also knows that no matter what else he did in life, he will always be remembered as the Arkansas governor who called out the National Guard to prevent integration.

"If I had the same situation, not any changes in the circumstances, I can't think of anything I would change," he says. "I'd like to change a few of the circumstances."

Faubus still insists he was only trying to preserve peace by having nine black students turned away from Central High. He blames what little violence occurred on President Eisenhower, who sent in the Army to make sure the blacks could attend school.

Faubus's act gained him an international reputation as a racist. But it endeared him to Arkansians. He was elected to unprecedented terms until 1966 when he chose to step down.

His life out of office has been no less turbulent. He has divorced and remarried, lost his only son to drugs, failed in two political comeback attempts, moved from his native state and battled against poor health and poverty.

When Faubus divorced Alta, his wife of 37 years, in 1967, she took their two weekly newspapers in the Ozarks, and he kept the "dream" mansion he had built on 70 acres near Huntsville, Ark.

With little income, Faubus gave tours of the mansion at \$1.25 a head and directed the Dogpatch USA theme park for about a year. He also took a job as a bank teller — a move that drew national attention.

"It wasn't just a teller. I was in charge of the branch," Faubus says. He ran for governor again in 1970 and 1974 but lost in the Democratic primaries to Dale Bumpers and David Pryor, who both went on to become governors and later senators.

"No one had ever been governor of Arkansas, then been out of office and come back," Faubus says. "So I thought I would try it. Since I set all the other records, I thought I might be able to set that one."

He laughs. "That was kind of foolish pride, but after all, ambition and pride motivate us all to some extent." In Houston — the home he chose in 1976 for its climate and medical facilities — Faubus worked briefly in public relations for a private investigation firm, then he began writing his memoirs.

Since the book was published late last year, Faubus has been driving throughout Arkansas to deliver copies.

"That's better than giving up 40 percent," he says. "That's what the bookstores take. The distributors take 15."

His travels — already interrupted by surgery for an ulcer — will be complete this summer. Then, Faubus says he'll be writing some more or looking for a job.

Faubus is still revered among Arkansas officials. On several visits to the state Legislature this year — once with an armload of his books — he always received a standing ovation.

Faubus says he believes history will eventually see the 1957 desegregation crisis as he saw it, will see his role as peacemaker rather than the instigator of violence.

"There are some that still want to

classify many people who opposed what was happening as prejudiced bigots," he said. "But that is the time-honored tradition of fighting unfairity."

Faubus, his anger just under the surface, describes the Little Rock crisis as the culmination of others' mistakes foisted on him.

The Little Rock school board, acting under the U.S. Supreme Court's ruling that "separate but equal" schools for blacks and whites were unconstitutional, had drawn up a desegregation plan that called for sending nine black students to Central High in 1957 and integrating lower grades later.

If prominent Little Rock citizens had not portrayed the desegregation plan as a model for the South, Faubus says, those outside the city would not have been so interested. If federal officials, including Eisenhower, had been willing to enforce the existing federal court order that integration must proceed, Faubus would never have had to act, he says.

"They knew it was going to be unpopular, they knew it was going to be difficult, and federal agents would have been the ones that were the object of invective and scorn," he says. "They were a bunch of hypocritical cowards, is what it boiled down to."

"They sat back with their idle hands and called upon the state to go against its own constitution, its own laws and the sentiment of its own people to enforce a court order most people thought was unconstitutional anyway and illegal."

"So you have to take into consideration what the feelings of the people were at the time, what beliefs were at the time," he says. "Because you don't deal with situations the way you'd like them to be, you deal with them the way they are."

The situation, Faubus says, it was that emotions were high and violence was likely if black students crossed the threshold of Central High. He called out the National Guard and gave them orders to turn the students back.

Three weeks later — after a private meeting between Faubus and Eisenhower — court battles, speeches and dire warnings — Faubus pulled back the Guard and left security to the city police. The black-student-led riot to go to school, but when mobs of angry, shouting whites gathered to protest, the police ordered the black students removed.

A disgusted Eisenhower sent the 101st Airborne Division to Little Rock, and two weeks later, the Army ringed Central High to make sure the nine blacks could attend school unharm.

Faubus was furious. "We are now an occupied territory," he intoned in a televised speech. He claimed "Yankee soldiers" had held "naked, unheated bayonets in the backs of schoolgirls," and the FBI had kept high school girls "incommunicado" for hours of questioning while their terrified parents wondered where they were.

But the crowds were held at bay with minimal force from the troops, and the black students stayed in school for the rest of the year. The army stayed at Central until graduation, too.

"The record shows we didn't have anyone hurt sufficiently to be hospitalized," Faubus says. "No one was killed and not a dime's worth of property was damaged. No one lost a job or a business because of the order."

Little Rock's wounds seemed trivial, compared to the violence that broke out years later when other cities — Northern cities — tried to integrate their schools. Faubus takes credit for that.

With some variations, the situation Faubus faced in 1957 has stirred again in Arkansas with the influx of Cuban refugees to Fort Chaffee. Former Gov. Bill Clinton, in the face of strong hostility from the communities around the resettlement center, asked last year if he was expected to "stand in the schoolhouse door" to keep the Cubans out in defiance of federal orders.

Faubus says he might have. In particular, he says he would have made sure no criminals or mental defectives were sent from other

camps when the refugees were consolidated at Chaffee last October.

"If I'd had to, I would have put the National Guard up there and I wouldn't let them unload the plane. I'd have made them turn around and fly back," he laughs again, wheezing. "But not many people have the audacity that I have."

Faubus was born Jan. 7, 1910 of Ozark Mountain parents. In more mellow moments he liked to compare his humble beginnings with those of Lincoln. He grew up on a rocky hill farm in northwest Arkansas, an area known locally as Greasy Creek, near the community of Combs.

Faubus attended elementary school at Combs, which as some country schools did in those days, met about four months a year. Much of the rest of the time he worked the farm, or swung an ax alongside his father, Sam, cutting hickory staves for sale to the local sawmill.

He was 17 years old by the time he graduated from Huntsville High School, having worked as an elementary school teacher in the process to pick up a little more money for the family.

His only brush with higher educa-

tion was to become almost as controversial in state politics as Faubus himself was to become nationally later.

In 1953, he enrolled at Mena Commonwealth College, which no longer exists. The college later was cited as a Communist enterprise by the U.S. Attorney General's office and the House Committee on Un-American Activities.

Faubus stayed at the school long enough to be elected president of the student body and a delegate to the All-Southern Conference for Civil and Trade Union Rights in Chattanooga, Tenn.

When the fact of his attendance surfaced in his first race for governor in 1954, the bad taste of McCarthy anti-communist witch hunts was still thick in America.

Faubus denied he had ever gone there. When records were produced to prove otherwise, Faubus admitted he had attended — the Mena school — "a short time" but left when he found out what it was all about.

Faubus apparently picked up some backlash sympathy vote and defeated Gov. Francis Cherry to win his first term in office.

Orval Faubus at 71: He now lives in Houston

Feds tell agency head wife's job is nepotism

TUCSON, Ariz. (UPI) — Cupid's arrows have gotten entangled in some federal red tape but John Arnold and his wife, Elise, are not letting the bureaucracy deflect them off course.

Arnold heads a private social-service agency that receives federal funding and his wife at the time they were married in 1976 was the planning director of the agency.

Both still work for Portable Practical Education Preparation Inc., an agency providing job training, housing, education and services for rural families.

But Paul Katz of the U.S. Community Services Administration's regional office in San Francisco, which dis-

penses the federal funds, says there is a problem.

"We have a regulation prohibiting any family relationship on the payroll," he said. "Taxpayers don't like the idea of their funds being used to support family members."

The federal agency has given Arnold's agency until July 1 to either clear up the alleged nepotism or have \$100,000 in federal funding cut off.

Arnold denied there was any impropriety, noting his wife was already on the payroll before they married.

"If they say she shouldn't do work concerning CSA business, she doesn't have to," Arnold said. "We'll assign that to someone else. That will be less for her to do."

The B-52: Aging lady waits in wings to be replaced

"When the height of the paperwork equals the weight of the aircraft, it's ready to fly"
— Sign in B-52 maintenance shop

By RICHARD C. GROSS
United Press International

ABOARD A B-52 BOMBER — The charcoal-brown hills of North Dakota rush up as we zoom out of cloud cover in a shallow dive, the blunt nose of our B-52 aimed at a red, white and silver trailer truck trailing along a dusty road.

The roar of our eight jet engines over the silent, nearly empty farming country and the appearance from nowhere of a massive bomber with its glossy white belly swooping toward him surely startles the driver of this rig.

Although he may think so, his truck is not our target as we sweep 400 feet over it at 350 miles an hour for the first of two low-level bombing runs four hours into our 10-hour mission, the buffeting wind pushing us toward the hills that whoosh past the cockpit windows.

Mission objective: To practice how to get under Soviet radar defenses and drop a nuclear bomb from a manned bomber, which, the Air Force insists, is not an anachronism in an age of push-button ballistic missiles.

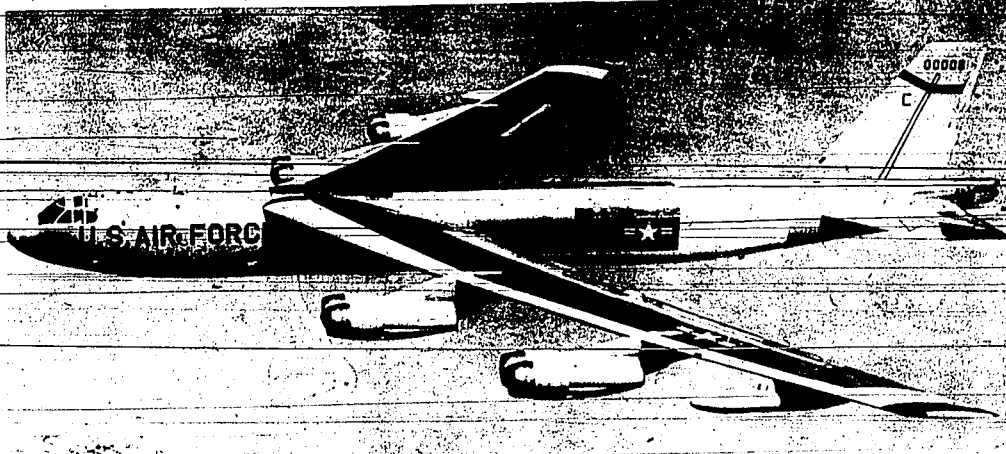

This mission was identical to thousands that are flown each year by the Strategic Air Force's fleet of B-52s, an aging airplane fraught with maintenance problems that the Air Force wants replaced now with a new bomber that can be flown with the tender care that only a loving crew can give it.

As we prepared to take off on this mission, our B-52 squatted eerily on the concrete apron in the silence of a pre-dawn chill like a huge moth with its wings spread. Its glossy white underbelly reflecting spotlights that cant upward but fail to reach the blackened cockpit.

Ed Adler, plainly in love, poked a yellowed flashlight beam into her dark recesses in a routine search for telltale wetness, his shadow stretching toward the immense extended wing flaps as his eyes followed the bobbing light exposing the metallic hydraulic systems.

Little should be wrong with No. 0049 because it was to be her first flying mission after seven weeks on the line at Ellsworth Air Force Base, S.D. She had sat motionless on alert status, pregnant with nuclear weapons and fuel, waiting for the call that never came.

But minor arthritis pains did dog No. 0049, an H

model of the B-52 bomber that was among the last to come off the Boeing line in 1962. The ailments are common among the 356 B-52s that are the mainstay of the Strategic Air Command's bomber fleet.

It is a plane whose basic swept-wing design was completed in the 1950s, was modified in the 1960s, went to war over Vietnam in the 1970s, is primed for nuclear Armageddon in the 1980s, and may be called upon to serve until the end of the 1990s and beyond.

There are critics who say the ballistic missile has ruled out the necessity of maintaining a force of manned bombers. The Air Force disagrees. It has been crying for a new bomber and the Reagan administration has dried its tears as part of the biggest peacetime buildup in U.S. history.

It has promised the Air Force a new plane. Four prototypes of the B-1 bomber, the Rockwell International plane President Jimmy Carter grounded in 1977 for economic reasons, have been

built. The B-1 is to the B-52 what the B-52 is to the B-29 of World War II. The plane is ready to go into production at \$100 million a copy.

What the Air Force is likely to get will be an updated version of the B-1, a machine that by the end of the decade will be able to incorporate technology now under development: "stealth," a top secret method by which a plane would be all-but-invisible to the air defense radars now used by the Soviet Union.

WHY IT'S OBSOLETE

In contrast, the B-52 carries with its hulking frame a radar signature that would make it look to a Russian sitting in front of his scope as if a two-story building were coming at him. Easily identifiable, easily destructible — as the thinking goes.

It's this signature, the Air Force argues, that makes the B-52 obsolete.

And it's the lumbering hugeness of the B-52 that

may be a reason the fliers have dubbed the plane the BUFF, which in language common to soldiers since men carried clubs is an innocent acronym for Big Ugly Flying F... (expletive deleted).

To get around this obsolescence, SAC has been training its crews to fly low-level bombing missions — as close as 400 feet off the ground so the B-52 can fly under Soviet radar defenses. It's a common tactic with smaller, more maneuverable fighter-bombers, as the Israelis know.

But to do it in a B-52, designed for missions at smooth high altitudes of up to 50,000 feet, is like hang gliding through the gusty winds of a mountain pass. The flight of a soaring eagle it's not.

Consider the bomber. First recognized by the Army as a potent weapon in 1921, it was the only instrument capable of destroying the Nazi and Japanese engines of war at home before

See STRATEGIC Page 9

Ex-sergeant looks like showgirl, but leave legs alone

ATLANTIC CITY, N.J. (UPI) — Ever since she was a little girl, security expert Ann Wisniewski disliked stereotypes.

She discovered prejudice at an early age when she first professed her desire to be a policewoman.

"When I was in the third grade I had a nun for a teacher who asked us to write down what we wanted to be when we grew up. I wrote down policeman. She gave it back to me and said, 'No, you're a girl and can't do that.' So, I changed it to fireman. Again she said no. So, to please her, I wrote down nun. She accepted that."

Ms. Wisniewski said and laughed.

Ms. Wisniewski, 40, is assistant director of security for Horrah's Marina Hotel-Casino and directs a security force of 200.

Prior to working for the casino, she was a sergeant on former Philadelphia Mayor Frank Rizzo's no-nonsense police force. She was trained at the Philadelphia Police Academy and has worked in all sections of that police department in-cluding its homicide, burglary and vice divisions.

Showgirl tall and thin, she has the kind of physical features many "males" (as she calls men in her police slang) find irresistible.

"But she says reading them is easy. 'With some males you just have to be very hard and cut them off right away and say, 'Look, I'm not interested.' Others you joke them away,' she said.

"But really, nobody gets wise if you're all business and stand five foot eight," she said and smiled.

Nevertheless, she has had her share of odd happenings as a policewoman.

"When I was a sergeant in Philadelphia I was once assigned undercover and rode a bicycle for 10 months. There was a gang of what we

called "wolf packs," guys who hit women on bikes with boards or branches knocking them off the bikes and then robbing them.

"One night when I was resting on a bench talking to my backup officers on my hidden microphone — the wire went right up my sleeve — some guy kept moving closer and closer to me, from bench to bench.

"My backup said, 'Watch out for this guy.' So, finally, he sat right next to me and introduced himself and put

his hand on my leg. And then he said a weird thing."

"He said, 'You know why I left New York? I left because the police force put breads on the force and I was always getting pinched for grabbing some bread's knee.'"

"Well, with that I laughed, reached down into my purse, flashed my badge at him and said: 'Getcha!'"

"You should have seen the look on that guy's face," Ms. Wisniewski said and laughed.

She still rides her bicycle for exercise, but her favorite hobby is reading.

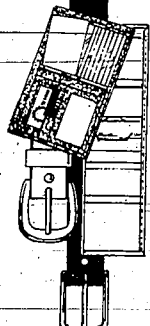

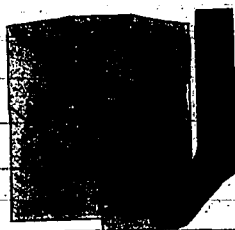

"I read psychology books. I especially like Freud and also the behaviorists. I like good honest, historical novels because I don't believe there are any superheroes out there," she said and paused.

And like a modern version of Detective Friday of the "Dragnet" series in the 1960s, she said laconically, "I like the facts."

Fine leather wallets in three fold, register and index, secretary styles; brown or black. 8.50-12.50.

HARNESS HOUSE BELTS

Classic leather belts in brown or black. Regular or reversible styles, 11.50-17.50.

HUSH PUPPIES 'CAPRICE' SLIP-ON

Casual suede leather shoe in Italian Earth or Dark Camel. \$34.

Bus driver sues 'bums'

PHILADELPHIA (UPI) — Bus driver William Halloran complained, "I'm a passenger—that somebody ought to sue these guys" involved in the major league baseball strike, but he didn't expect to go to court himself.

He filed suit Tuesday against the National Labor Relations Board in U.S. District Court seeking immediate resumption of major league action and to allow fans to participate in the settlement of disputes causing such walkouts.

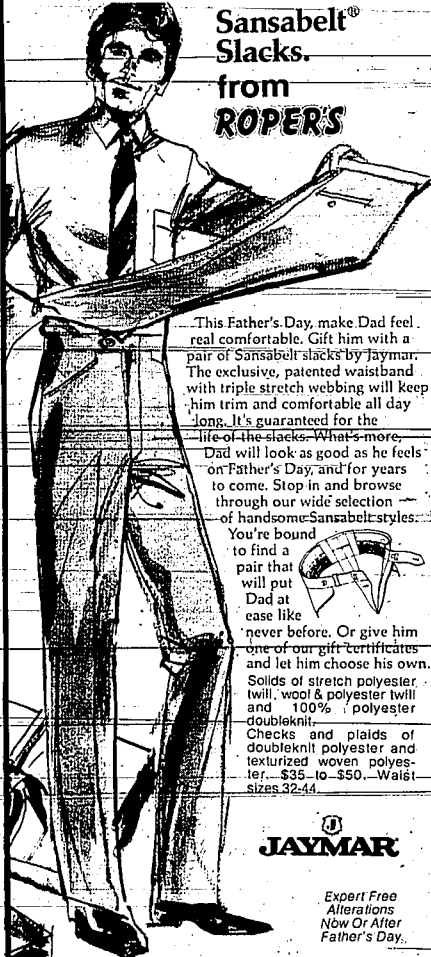

Halloran became the plaintiff after turning about the strike to passenger David H. Kubert, a Philadelphia attorney, who took up the cause.

The suit also seeks an order that would prohibit strikes by major league players during the regular baseball season.

Kubert said Halloran hopes the owners and players will "wake up to the fact that the baseball fans of America... are not going to be pushed around anymore."

Give Dad a fitting gift.

Sansabelt® Slacks, from ROPER'S

This Father's Day, make Dad feel real comfortable. Gift him with a pair of Sansabelt slacks by Jaymar. The exclusive, patented webband with triple stretch webbing will keep him trim and comfortable all day long. It's guaranteed for the life of the slacks. What's more, Dad will look as good as he feels on Father's Day, and for years to come. Stop in and browse through our wide selection of handsome Sansabelt styles. You're bound to find a pair that will put Dad at ease like never before. Or give him one of our gift certificates and let him choose his own.

Solids of stretch polyester, twill, wool & polyester twill and 100% polyester doubleknit. Checks and plaids of doubleknit polyester and textured woven polyester. \$35 to \$50. Waist sizes 32-44.

Strategic Air Command anxiously awaits new plane

* Continued from Page 8

they could be rolled, flown or sailed onto the battlefields of World War II.

In 1945, it was the only weapons system capable of carrying the atomic bomb and unleashing a power whose awesome dimensions dwarfed even the imagination of man.

Today, the B-52s comprise only 18 percent of the U.S. strategic force, but they can carry a nuclear payload of greater megatonnage than all of the warheads on the 1,052 intercontinental ballistic missiles in the American arsenal combined.

Thus, despite modern missile technology, the bomber stands as the strongest leg of the nuclear triad — the three dimensions of the U.S. strategic force that include missile-laden submarines and the land-based Titan and Minuteman ICBMs.

And it is the only one of the three that takes its human operators close to their nuclear targets.

A sleek fighter may be more dashing, but a bomber is deadlier in its seriousness. One of them can destroy a city. A pair of B-29s did — the two that dropped atomic bombs on Hiroshima and Nagasaki in end World War II.

PILOT'S LOVE

"Have it," said Capt. Edward Adler, 35, a divorced and remarried father from Evansville, Ind. He piloted No. 0049, which has no name. Flight crews today no longer are assigned to only one plane.

"I know fighters are more glamorous, but I'm one of the few who wanted bombers," he said. "I wrote an essay about B-29s when I was in high school in 1964."

BUFF No. 0049 had been flying at least two years by then.

Gray is beginning to streak Adler's parted dark hair but his wide brown eyes reflect a touch of boyishness, a trait common to fliers. Their profession brings out the boy in the man. The average age of a bomber pilot is 31.

Adler's sandy haired co-pilot, Capt. Randall Malcom, 27, and married, of Indiana, Pa., thinks much the same way as his chief. He took the common step of volunteering for bombers after flight training. The Air Force teaches the B-52 art to combat crews for 19 weeks and two days at Castle Air Force Base, near Merced, Calif.

"I wanted to be a pilot since I was a kid," Malcom said. "I volunteered to be in a bomber."

But, like other "frustrated bomber pilots," Malcom occasionally takes flight in one of the five white needle-nosed T-38 trainers on the base.

The trainers serve two purposes: to give the

bomber pilots a chance to fly by the seat of their pants like acting behind the wheel of a sports car. After driving a bus and more practically, the zip-around flights rack up flying hours for the purpose of gaining experience.

Either way, it's a morale booster.

Pilots of fighters, ground attack and reconnaissance — men who fly alone without crews — are in a sense the cream of the crop in the Air Force since they are picked from the upper two-thirds of flight training classes. Even so, those who qualify for the smaller planes might opt for bombers or cargo aircraft out of personal preference.

Adler, leaning against his gear strapped against the window, went through the checklist with the crew chief, who stood near the bus driver.

There are checklists for everything in the Air Force. No chances are taken with multimillion-dollar weapons systems and their capability to lose mass destruction.

Once outside, Adler walked around the plane poking the beam of his flashlight at its innards, not unlike a prospective buyer tire-kicking on a used car lot.

"Do you know what to look for?" came the question as the beam picked out some complex wiring.

"Well, I don't know everything, there is to know about these systems but I do know when something is dripping," Adler smiled a reply.

Climbing into No. 0049 from a belly hatch is the reverse of climbing down a well. It's just as steep, nearly as dark and just as cramped.

CRAMPED CREW

The crew's quarters are incredibly tight-fitting for a plane nearly the size of a 747, as if it were a tank. Once the six men are strapped into their cushioned seats they rarely get up, except to relieve themselves.

There is no separate compartment used as a lavatory, no call buttons and no please-leave-the-sink-clean-for-your-fellow-passengers signs. What sink?

"As usual, they thought of us last when they built this plane," said Capt. Joseph Burns, 33, of New York City. He was along for the ride as an instructor in electronic countermeasures, or ECM. His gripe is a common one.

Precious space aboard a B-52 is devoted to its 239,000 gallons of fuel — 39,833 gallons — and its 20,000 pounds of bombs.

Adler and Malcom have it best of all, up front on the top deck in the drivers' seats. Ten feet behind them, the ECM man and tail-gunner sit side-by-side facing the rear wall in darkness but for the red glow from their instruments.

The tail gunner was moved from the rear of the plane several years ago because the "ride" was too bumpy, especially during the turbulence accompanying low level missions. He can sight his target through a radar scope in front of him and can fire his 30mm cannon electronically.

Problem: Since the gunner is the only non-officer aboard, he often is called upon to get the coffee. It's kept in an urn and served in polystyrene cups.

Below, in the "wine cellar," the navigator and bombardier sit huddled together, hunched over their glowing scopes and knobs and dials and switches. The red glow from their panels, reflected in their eyes, cheekbones and foreheads — the only areas left exposed by their oxygen masks.

They face forward, but it's like living at the back end of a subway tunnel.

Even though they were going to crash, only the pilot and co-pilot in their ejection seats could be assured of getting out alive.

UNSEEN TARGET

Another checklist, this one between Adler and Malcom. Switches flipped, dials twisted and engines with a combined thrust of 136,000 pounds ground to life as first light visible through the windshield awoke the heavens.

The beige nuclear blast curtains were rolled up. During a nuclear strike, they would be zippered over the cockpit windows as a precaution against the searing burst of light that precedes the sound of an atomic explosion and can blind. The pilot would fly on instruments and never would visually see his target.

The belly of the B-52H is painted glossy white to reflect the heat given off by a nuclear blast.

MISSION'S HIGH POINT

No. 0049 nosed onto the taxiway behind another BUFF, the flight leader for a brief part of the 10-hour mission. The training flight went over the truly black

feet of hulking No. 0049, squatting on its landing gear behind the speed limit.

Two men from the maintenance crew clumped noisily aboard the bus. Their cheeks were reddened by the chill breeze whipping across the air base on a rise overlooking the street lights of Rapid City, S.D., twinkling in the predawn clearness.

"She's all yours, captain," said the crew chief, the phrase worn through dozens of war movies. "There's a problem with one of the fuel indicators for the No. 4 engine; it doesn't seem to be working. But I think you'll be all right."

The backup indicator was working.

Adler, leaning against his gear strapped against the window, went through the checklist with the crew chief, who stood near the bus driver.

There are checklists for everything in the Air Force. No chances are taken with multimillion-dollar weapons systems and their capability to lose mass destruction.

Once outside, Adler walked around the plane poking the beam of his flashlight at its innards, not unlike a prospective buyer tire-kicking on a used car lot.

"Do you know what to look for?" came the question as the beam picked out some complex wiring.

"Well, I don't know everything, there is to know about these systems but I do know when something is dripping," Adler smiled a reply.

The beige nuclear blast curtains were rolled up. During a nuclear strike, they would be zippered over the cockpit windows as a precaution against the searing burst of light that precedes the sound of an atomic explosion and can blind. The pilot would fly on instruments and never would visually see his target.

The belly of the B-52H is painted glossy white to reflect the heat given off by a nuclear blast.

MISSION'S HIGH POINT

No. 0049 nosed onto the taxiway behind another BUFF, the flight leader for a brief part of the 10-hour mission. The training flight went over the truly black

hills of the Dakotas, out past the pluming geysers of Yellowstone and into Montana's Big Sky country.

The Federal Aviation Administration clears the BUFF's flight paths and civilian controllers dotting the country stay in constant touch with the planes.

The high-point-of-the-mission was twice-diving to within 400 feet of the railroad on a run to the target, a simulated nuclear attack below Soviet radar defenses. The crew of No. 0049 scored hits on their targets — a tower and a tree — both times.

The descent was gradual — no dive-bombing stunts — and Adler flicked on his terrain-following radar to guide him over the hills and valleys. It's a green television screen, duplicated on Malcolm's instrument panel, that emits a jagged line, similar to a cardiogram, that depicts the contours of the land below.

The best part of this is that after four hours into the mission you come upon a tower out of nowhere and that's your target and you must hit right where it's supposed to be," Malcom said. It's Malcom's job as co-pilot to prepare the flight map the day before the mission.

It takes all day to prepare for a mission that takes all day to fly.

RADAR WON'T RADIATE

No sooner had No. 0049 crabbled onto the taxiway — the wind pushed the huge plane sideways though the wheels continued straight — than the bombardier, Capt. Danny Wilson, 32, of Bossier, La., contacted Adler through the tiny microphone in his oxygen mask.

"Something appears to be out of order here," Adler radioed Foxrot, his ground controller.

The problem was Wilson's radar; it wouldn't radiate.

"Estimate 30 minutes for repair," captain, Wilson told Adler.

Chatter ensued among Foxrot, the pilot of the lead bomber, Adler and the pilot of a KC-135 tanker scheduled to join the mission for a refueling exercise. The tanker never made it because of problems of its own.

"We're going to hold both bombers and the tanker as long as we can," Foxrot said. The sun broke through and 20 engines on two bombers and a tanker whined on the taxiway.

"Okay," replied Adler.

"Just hang loose and we'll launch you later, one-two," said Foxrot. "One-two" was the designation for No. 0049, the second plane in the "cell."

"One-one" was the flight leader.

"You say you're going to launch us late with one-two," came the voice of the flight leader.

"Just hang tough there and as soon as one-two gets fixed we'll launch you both together," Foxrot replied. Then, to Adler, he said: "You're clear to go ahead with maintenance."

Such problems are commonplace on these wrinking B-52s. But many of the minor mishaps would be ignored in wartime when the bomber would be ordered aloft to do to the enemy what the enemy was about to do to the United States.

It's that MAD policy — "mutual assured destruction" — the United States counts on to prevent a Strangelovian nuclear end to life as we know it.

MAINTENANCE NIGHTMARE

To keep the B-52s fit, 30 to 50 hours of maintenance stand behind each hour of the bomber's flying time. But the problems never end away and the manufacturer's guarantee expired long ago.

"Everytime we go up something else goes wrong," Adler said. "After awhile, you have maintenance problems all the time. The maintenance people work very hard. We get good maintenance."

It costs \$6,838 for every hour a B-52 is in the air and 57 percent of that is for fuel. The rest is mostly for maintenance. This 10-hour training mission was costing \$68,380, and there were nine others like it that day — and that was only out of Ellsworth.

The B-52s were designed to fly 8,000 hours. No. 0049 was beyond 5,000 hours. The older B-52Ds, the Vietnam War veterans, have been beyond 13,000 and 14,000 hours on them.

It turns into a maintenance nightmare as you go down the road toward 13,000 to 14,000 flying hours," said Burns, the ECM instructor.

Most bomber crews have logged at least 300 flying hours of experience, a point at which they are qualified to carry out a nuclear attack.

He's trapped by telephone

BLOOMINGTON, Ind. (UPI) — Daniel Taylor could go to jail for not answering his telephone.

Taylor, 33, of Bloomington must either be at his job at Public Service Indiana or at home for the next two months when his probation officer calls. If he does not answer the calls, which come twice a day at random times, he could be jailed.

Taylor recently was sentenced to an experimental "house arrest" program by Monroe Superior Court Judge Kenneth Todd for his third drunk driving arrest.

It was the first time an Indiana judge used the program.

"We have this as another option to restrain their freedom without putting them behind bars or letting them think it is a little exercise that doesn't mean anything," Todd said.

Mayor to dim lights to protest rate hike

MICHIGAN CITY, Ind. (UPI) — Mayor Clifford Arnold wants to dim the lights in his city in protest of another utility rate increase.

Arnold urged Michigan City residents and other customers of the Northern Indiana Public Service Co. to burn just one light from 8 p.m. to midnight Tuesday. He said the "voluntary brown-out" could be copied by other communities served by NIPSCO.

His protest was urged on the eve of rate hearings by the Public Service Commission in Gary and Michigan City.

"Street lights will be kept on, and police and fire offices will use normal lighting," Arnold said.

He makes a living playing Jefferson

PHILADELPHIA (UPI) — Rob Coles is in Philadelphia doing what he does best — playing the role of his great-great-grandfather, Thomas Jefferson.

Coles, 29, lives on his family's 400-acre farm in Charlottesville, Va., about six miles from Monticello, the place where Jefferson, third president of the United States, lived and died.

Coles bears a striking resemblance to portraits of his legendary ancestor and makes a living playing the part in a traveling show called "Meet Thomas Jefferson."

"In 1975, the actor Ron Crew was interested in Jefferson and came to Monticello to do research for a show," said Coles, who like Jefferson is a lanky 6-foot-2 topped by a thick head of red hair. "A hostess there told him about me."

"I'd never acted before, but he asked me to come to California and I went out. We put the show together. It was sort of like playing softball every other Sunday and suddenly being thrown into Dodger Stadium."

The show plays mainly to university clubs and historical societies. As usual for the performances, Coles was on hand in his gold-trimmed maroon jacket with tails, white ruffled shirt and knee high pants for the 17th Annual Old Market Fair at Thomas Jefferson University Hospital.

"The show is accurate historically," Coles said. "Hopefully when we do it, most people — children as well as adults — learn something."

"One fact that frequently surprises people who aren't that familiar with the history is that Jefferson and John Adams (the second U.S. president), who worked together on the Declaration of Independence, both died on the 50th anniversary of the July 4th signing."

"That's pretty coincidental. I don't know if it means anything, but it's something fun to think about."

Coles said the most rewarding moment in his career was when Jeffersonian scholar Dumas Malone told him after seeing the show, "I enjoyed it very much."

"It's hard to explain, but when someone whose such an authority says they liked the show — Mr. Malone knows everything about Jefferson — that's rewarding. Naturally when you're kin to somebody, you don't want to do anything to hurt that memory."

Rob Coles and bust of fifth great grandfather Thomas Jefferson. Coles tours country portraying Jefferson.

Canine Country Club: Bowser's got it made

VIRGINIA BEACH, Va. (UPI) — The Canine Country Club pampers its tenants, making them feel at home with fresh vegetables right out of the garden, poached eggs or an early morning recitation of the 23rd Psalm.

"We even kiss them good night," said manager Bonnie Williams. "Certain ones require it. They're used to being kissed good night."

The Canine Country Club was founded 24 years ago by Capt. Alfred L. Nicholson and his wife Katherine when kennels, let alone luxury pet hotels, were non-existent in Virginia Beach.

Mrs. Nicholson said the couple started the business because they had no place to board their own five dalmations — the last dogs from a breeding business they had given up before moving to the coastal resort city.

The Canine Country Club charges no more than the average kennel, \$6 per dog per day, and each dog is given a large cage with its own private run. The animals are walked frequently — and they are fed well.

"We treat them just like we would a child," Mrs. Nicholson said.

And some, like Alfie the Yorkshire Terrier, are fussy children.

"That Yorkie would only eat tuna, fish and rice," Mrs. Williams laughed. "He liked it. I couldn't believe it. We'd set it down in front of him and he'd gobble it up."

Michelle the Poodle, on the other hand, was partial to fried beef — no onions, thank you, although fried beef smothered in onions is a popular menu item at the kennel.

And there's the dog who was served two slices of Edam cheese every night at 9; and another border had to have his carrot at 5 p.m.

"George the Basset, a female, likes to have poached eggs every morning," Mrs. Williams said. "She'll just lay there and wait for it. She's very expectant and she has to have it."

Mrs. Nicholson said dogs are uncomfortable when left at a kennel by their masters, and the special treatment is designed to help them adjust quickly to the new environment. "We're treating dogs as they are treated at home," she said.

One woman came in and asked us to read the 23rd Psalm to her dog at 9 o'clock in the morning," Mrs. Nicholson said. "We did it and the dog just loved it."

The Nicholson maintain a garden to supply fresh vegetables, primarily lettuce and tomatoes, for their boarders. A chicken house on the 12-acre kennel grounds supplies chicken dinners and fresh eggs.

"They get preferential treatment," boasted Mrs. Williams. "We give them whatever they want."

Some straight talk, answers about controversial drug DMSO

By NEIL SOLOMON, M.D.
© Los Angeles Times Syndicate

There is considerable public interest about the substance dimethyl sulfoxide, DMSO.

However, there is also much confusion and controversy about the real facts surrounding DMSO. As a result, many Americans — particularly the nation's 31 million arthritis patients — are being exploited daily by sensational — testimonial, unscrupulous promoters and unsafe products.

The Arthritis Foundation, which for the past 30 years has been sponsoring much of the research in rheumatic diseases, believes that: (1) DMSO should not be available for sale until research has determined its safety and effectiveness in treating such diseases as arthritis; (2) the FDA has been unjustly accused of dragging its feet in approving the drug; and (3) the attention created for DMSO has obscured what is the most effective weapon against arthritis: research.

Because of the intense need for proper consumer information about DMSO, the Arthritis Foundation has developed an extensive editorial statement by Dr. Frederic C. McDuff, senior vice president for medical affairs and former director of research at the Mayo Clinic. We think this information is particularly timely and significant for your readers. It is the definitive opinion of the only national organization concerned with seeking the cause, cure and proper treatment for arthritis.

Peter C. Matton, Vice President/Arthritis Foundation, Atlanta, Ga.

The following are Dr. Frederic C. McDuff's comments about DMSO.

During recent months, the drug dimethyl sulfoxide — commonly known as DMSO — has been the

center of public confusion and controversy. A large part of the debate stems from two segments on CBS-TV's "60 Minutes" which made "wonder drug" claims for the substance appear true. These television shows and subsequent congressional hearings in Washington have dramatically — and sometimes sensationally — publicized DMSO, giving false hopes to millions who are in pain.

DMSO has been hailed as a miracle treatment for conditions ranging from sprains, to arthritis, to black eyes, but there is no adequate scientific evidence that the substance has any effect beyond being a mild pain reliever. Amid all the claims made for DMSO are these facts: (1) DMSO has not been adequately tested by scientific methods and is very possibly dangerous; and (2) many Americans, particularly the nation's 31 million arthritis patients, are being exploited daily by sensational — testimonial, unscrupulous promoters and unsafe products.

Let us examine the facts about DMSO and the actions needed, according to the Arthritis Foundation, for providing the public with research answers.

HISTORY OF DMSO

DMSO is a byproduct of the paper manufacturing process, and has long been used as an industrial solvent. In 1963, it was patented as a drug by Crown-Zellerbach Corporation of San Francisco. The same year, the University of Oregon School of Medicine reported that DMSO, when applied to the skin, was rapidly absorbed and circulated throughout the body, and that it quickly reduced pain and inflammation. Soon, thousands of people were using DMSO for painful conditions in a haphazard way.

For all new drugs, the Food and

Drug Administration (FDA) requires controlled scientific testing and results before it can approve the substance for general public use. However, in 1965 the FDA suspended testing of DMSO because the drug was found to cause cataracts in the eyes of rats. Possible eye damage in humans still remains an unanswered consequence of using this drug.

No serious side effects in humans have yet been reported, so the FDA has over the years gradually lifted its ban on DMSO testing and has allowed it to be scientifically evaluated for certain limited applications. At present, human use of DMSO is only approved for treatment of interstitial cystitis, a rare and painful bladder condition. Yet DMSO is sold to over 100,000 Americans each year, usually illegally and often in forms not intended for human use.

COMMON DMSO MISCONCEPTIONS

Claims and testimonials for DMSO abound, yet most discussions of the drug overlook certain critical information. For example:

Misconception: "All DMSO is the same."

Fact: DMSO can be obtained in at least four strengths — 50 percent, 70 percent, 90 percent and 100 percent. The 50 percent version is used for treating the bladder condition in humans, and is not considered strong enough to be potentially helpful in dealing with the pain of arthritis, sprains, bursitis and the like. The latter ailments are being treated with the 70 percent version, a concentration that is not widely manufactured and is generally not available except to doctors who are conducting approved tests with it.

The 90 percent version of DMSO is used for veterinary applications on

horses and dogs; the 100 percent version is neither a medicine nor a drug but rather an industrial solvent. Unfortunately, these are the two types of DMSO that people most often use to treat athletic injuries such as sprains or chronic pain conditions such as arthritis.

These forms of DMSO are not intended for human use and as such often contain contaminants which may be harmful. Because DMSO is a "carrier chemical," it can carry into the bloodstream any impurities which may be present in the DMSO or on the skin to which it is applied. Other side effects must also be considered, including nausea, headaches, skin rash and the possibility of eye damage as suggested in the earlier animal studies.

"People are taking a risk whenever they use a substance of unknown quality and effect," says FDA Commissioner Dr. Jere E. Goyan. "FDA is eager for researchers to test DMSO to determine whether it is safe and effective for conditions besides interstitial cystitis. In the meantime, it is risky business to drink, inject or apply to the skin any substance not intended for that purpose."

Misconception: DMSO is a "miracle drug" for a variety of medical ailments.

Fact: Much of the enthusiasm for DMSO comes from testimonials, not from scientific data. This is a pattern physicians and researchers have come to expect whenever new "miracle" pain relievers are announced, and it is why even quick remedies can enjoy brief periods of public attention. It is correct to remain skeptical of claims which are not based on careful measurements made by objective scientific observers.

The largest group of patients caught up in the DMSO controversy are America's 31 million arthritis victims. The drug is being openly promoted at inflated prices by unscrupulous individuals as a remedy for arthritis, despite the fact that there have been no well-controlled studies documenting the effectiveness of DMSO in treating either of two major types of arthritis, rheumatoid arthritis or osteoarthritis.

One of the greatest dangers in the indiscriminate use of DMSO is that patients will neglect proven forms of treatment, and neglect can lead directly to needless pain and crippling. Although arthritis cannot be cured with drugs, modern treatment methods — including medication, therapy and surgery — are highly effective in controlling pain, in preventing damage to the joints and in enabling arthritis patients to live happy, productive lives.

Misconception: DMSO is approved and widely used in certain states, as well as in numerous foreign countries.

Fact: DMSO for medical use is beyond that approved by FDA is legal in two states (Oregon and Florida), but it is not widely used there. Nor has DMSO become a major sales product abroad — in countries where it is approved, such as in Canada where it is marketed for a little-known rheumatic disease called scleroderma. Critics of the FDA make it appear as if DMSO is a medical panacea throughout the world which is being unjustly withheld from the American people. That simply is not true.

Some clinics in Mexico claim to use DMSO for arthritis, and thousands of Americans travel there each year seeking relief. They often get relief, but not from DMSO. Many of those

clinics are actually dispensing phenylbutazone, steroids and tranquilizers, which are available in the U.S. but which require close medical supervision to avoid serious side effects. In some cases, patients have been given dipyrone, a drug capable of causing a blood disorder and death.

CURRENT STATUS

The FDA currently has over 30 applications from drug companies and physicians to conduct studies of DMSO in the treatment of several painful conditions, including osteoarthritis. Most of the initial studies will be done on acute injuries such as sprains and dislocations, which will require only short periods of treatment and will thus keep the risk of side effects low. If these studies prove encouraging, DMSO will subsequently be evaluated in chronic conditions such as rheumatoid arthritis.

In the meantime, a group of major arthritis centers have agreed to conduct a cooperative study of DMSO's effect on finger ulcers in scleroderma. This study is scheduled to begin soon and is sponsored by the National Institute of Arthritis, Metabolism and Digestive Diseases, a division of the National Institutes of Health (NIH).

Thus, trials of DMSO under properly controlled conditions are now being planned and carried out. The results are still months away, but legislators and the public can be assured that the current controversy and wondering will soon be replaced with answers. This is a change the Arthritis Foundation welcomes and has actively been working towards for months. In the meantime, those in chronic pain should pursue treatments which are tested and proven effective — anything else is too big a price to pay.

Thousands of bicyclists pedaling to Iowa

AMES, Iowa (UPI) — There is nothing in Patagonia, Doug Harshorn will tell you, except sheep, harsh winds and cold drizzle.

"It's a wicked environment. There's no place to hide. We had to literally turn our backs and let the rain and hail hit us," Harshorn said.

Patagonia — the far southern region of Argentina — was a bleak part of an 18-month bicycle trip by Harshorn and his brother, Scott, as they toured the length of two continents.

"It was always an adventure," Harshorn said, recalling the northern lights and salmon runs, inca ruins, dolphins that escorted a ferry and the hundreds of friendly people he met on the 16,000-mile trip.

Harshorn will talk about that trip and others he has made at the convention of the League of American Wheelmen on July 9-12 at Iowa State

University. The LAW is the nation's oldest and largest bicycling organization.

A pre-convention ride begins July 4 in La Crosse, Wis., and will cover 330 miles in reaching Ames. Riders will return to La Crosse after the convention by following a 375-mile route.

The convention is fueled by a passion for bicycling and the search for ways to make it more enjoyable.

Organizers hope to attract 2,000 bicyclists to Ames for the convention.

Among those attending will be Josh Lehman, who will share with bicyclists the two-week trip he took in January through southern China.

"In some respects, it was reassuring to see bicycle transportation used on a large scale," said Lehman, who encourages bicycling in his job at the Office of Environmental Affairs at the U.S. Transportation Department.

"The most important thing I

learned was the capability of the bicycle," he said in a telephone interview from his Washington office. "I saw a country that moves by bicycle."

The convention program is filled with reports on bike tours, discussions by sports physicians and sessions with state and federal transportation officials. Dozens of rides will be directed through central Iowa as part of the convention.

"You travel slowly, to take a little bit of a country and actually live there for a while," Harshorn said. "They're all different and worth seeing."

"People are willing to talk to you because you're on a bicycle," Lehman said his excursion in China was encouraging because bicycles are a major mode of transportation there, not just an alternate means of travel as in America.

For Father's Day . . . At ROPER'S When the shirt makes the man. Joel makes the shirt!

The California Classic by Joel. Combines the luxury of 100% polyester interlock knit with the practicality of wash and wear performance. One pocket. New book compares assassinations

Taking cases of Lincoln and Kennedy

By JOHN G. GRIFFIN
United Press International

It started with Abraham Lincoln — this frightening-American-pattern-of-periodic attempts to assassinate presidents.

While the various government agencies piece together the details of the latest horror, the shooting of Ronald Reagan, there comes new evidence in the two most profound and persistent presidential mysteries, the fatal attacks on Lincoln in 1865 and John F. Kennedy in 1963.

The evidence comes from an eminent source, Dr. John K. Lattimer, a noted physician and talented ballistics expert who has combined his expertise in a book entitled "Kennedy and Lincoln, Medical and Ballistic Comparisons of Their Assassinations."

"Of one thing you may be sure: This calmly-reasoned study is not going to create any uproar — nothing, for example, like the recent book which tried to prove Kennedy's body was spirited away before burial."

"I wouldn't mind being a little sensational, if that was the way the state were," says Lattimer, a one-time world class track man. "But I have simply done my best to establish the facts and these are the conclusions I must present."

Lattimer attacks what he calls "the assassin's bias" who try to "artfully mislead" to intrigue the public and, in many cases, line their own pockets by expounding Lincoln or Kennedy theories based on lots of conjecture and little solid evidence.

"At the same time he concedes that, in both historic cases, the door was left open for such self-serving buffy bumbling in the official investigations that at times approaches the mind-boggling."

For example, Lattimer notes many of the theories that there was more than one gunman at work in Dealey Plaza, Dallas, on the day Kennedy was slain are based on the official artist's drawings of Kennedy's wounds. In fact, even the Warren Commission's own ballistics tests were based on these drawings.

And yet the artist who drew those pictures had to use his imagination because he never was allowed to see the autopsy photographs.

Lattimer, chairman of the Department of Urology at the prestigious College of Physicians and Surgeons of Columbia University, is the only "outsider" expert who has been allowed to see all the autopsy material. In the case of Kennedy's wounds, he says, the actual first wound in the president's neck was four inches lower than the "official" artist's drawing — a difference that quite understandably led other investigators into error.

The doctor's book ties the cases of Lincoln and Kennedy together simply because they are, to many people to this day, mysteries. The chief similarity, of course, is that both supposed assassins, John Wilkes Booth and Lee Harvey Oswald, were themselves killed before they could tell their own stories.

Plus the official bumbling that left the waters so muddy, the controversies apparently never will end.

Lattimer has no illusions his studies will be the end. "All we can do is to exercise our best judgment from the evidence, and that is what I have tried to do," says Lattimer.

Taking the cases separately:

The chief disputes about what happened in Dallas, Nov. 22, 1963, are whether Lee Harvey Oswald fired the fatal shots and whether he was the only gunman shooting that day.

Lattimer's firm belief is that medical and ballistics evidence both support the Oswald-only position. From the autopsy and from ballistics tests which he himself conducted, he reaches these conclusions on controversial points:

1. The medical evidence is Kennedy was struck by two bullets, both almost certainly from the rear, and by only two bullets. He finds the autopsy evidence of the destruction of the front of Kennedy's head and ballistics tests with skulls he conducted entirely consistent with a shot that entered his head from the rear and exited from the front.

2. The medical evidence of the wounds suffered at the same time by Gov. John Connally indicate they could only have been caused by a bullet — which already had struck Kennedy and was "tumbling" when it hit Connally.

3. A startling new conclusion: Lattimer contradicts widespread belief Kennedy surely could have survived his first wound, which entered the back of his neck and exited from the front of his throat, if he had not been struck again — the bullet that shattered his head.

Lattimer believes Kennedy would

eventually have died from the first wound alone. Reasons: the sudden upward jerking of his arms, often erroneously described as a clutching for the wound in his throat, actually is a reaction known to doctors as "Thorburn's position" and indicates sudden damage to the spinal cord in the lower neck region. This spinal damage, he believes, would "at the very least" have left him with neurological problems of "substantial extent."

Kennedy, Lattimer notes, suffered from Addison's disease, insufficient operation of the adrenal glands. "His adrenal insufficiency, and consequent long-term cortisone treatment would certainly have been a disastrous handicap in the race for survival," Lattimer concludes.

Lattimer also deplors that the Kennedy family never has chosen to go public with the story of Kennedy's Addison's treatment. The doctor believes such publicity would give great hope to other sufferers by showing what Kennedy achieved despite his ailment.

4. It isn't hard to fire three shots from Oswald's Carcano-type rifle in 6.5 seconds, Lattimer says. It's easy, and it's easy to hit a head at that distance "twice" in that time "consistently."

All these and other points are buttressed by medical and ballistics evidence too ponderous to repeat in this

review, but indispensable to any student of the case.

The Lincoln case

There is so much meat in the Kennedy case, Lattimer could have omitted the Lincoln case — although the chapter, pointing out the huge number of wild coincidences makes good reading. (Examples: Lincoln had a secretary named Kennedy; Kennedy had a secretary named Lincoln; both were elected in a year ending in '60; both were shot in the back of the head on a Friday before a major holiday while sitting next to their wives; each married a 24-year-old socially prominent girl who spoke French, etc., etc.)

But most of the chief disputes lingering in the Lincoln case are not either medical or ballistic.

Few dispute Booth and no other was Lincoln's killer, and there is no dispute Lincoln died from that single derring-shot.

A major argument is whether Booth was the person actually killed in Garrett's barn in Virginia. Lattimer accepts the identification of the body as correct, chiefly from a scar on the back of the neck. Although other critics have stated the scar might have been destroyed by the shot that killed Booth, Lattimer believes Booth's wounds consistent with a shot that entered his neck from the side, rather than the back.

Powdered rhino horn best seller

WASHINGTON (UPI) — Everyone knows, of course, that powdered rhinoceros horn is a best-selling aphrodisiac, fetching more than \$500 an ounce in Singapore.

But did you know there are a lot of extras in some of the other body parts of the rhino? For example, one native remedy calls for grinding rhino molars and mixing them with water to reduce fever.

Also boiling a rhino head in coconut oil provides a soup that is used to treat toothaches — "toothiness" and — stomach aches. It must not, however, be taken by pregnant women.

International Wildlife, a magazine of the National Wildlife Federation, provides a whole list of native cures and suggests some may be more than a witch doctor's brew.

"Many people scoff at such 'unscientific' uses of animal parts," the magazine said, "but the truth is that many animal substances do have medicinal value."

Bea venom, International Wildlife reports, is used to treat arthritis and snake venoms are used as coagulants. painkillers, and they also are being tested in cancer research. A substance secreted by blowfly larvae is used to promote healing of bone infections and deep wounds.

Unfortunately, some animals have been pushed toward extinction because of their alleged curative powers. "This is especially true of these creatures also threatened by habitat loss: crocodiles, musk deer, rhinos and monkeys," the magazine said.

The rhino is by far the most widely prescribed animal, with powdered horn — highly prized as a powerful aphrodisiac in Asia, India and parts of the Middle East.

An ounce of powdered rhino horn goes for more than \$500 in Singapore. A pound of rhino skin sells for \$150 and a pound of rhino toes fetches \$180.

Twin Falls man heads sheriff's posse

By LORAYNE O. SMITH
Times-News writer

TWIN FALLS — Horses are an important part of the life of D.A. McGuire's life.

A skilled rider, the Twin Falls man has served as captain of the Twin Falls County Sheriff's Mounted Posse for some 25 years and has no plans to retire from the volunteer but responsible post.

McGuire, 76, a former farmer and car salesman, helped organize the Twin Falls posse in 1945. World War II did not end until August of that year and the idea was to have a trained group of riders who could help in times of wartime emergency, he said. Government officials at the time felt there was a possibility of refugees streaming into Idaho from the West Coast.

The Twin Falls posse was the first such group formed in Idaho, but in subsequent years male riders have formed similar groups in several of the larger Gem state towns.

Through the years the men not only have assisted in search and rescue work, but have provided a structure to promote the pleasure and development of horsemanship.

One of the most memorable civic assists was in 1974 when Evel Kenievel's widely publicized jump attempt over the Snake River canyon brought thousands of tourists to the area. Posse members helped with parking cars and directing the crowd at the site.

"I can park cars as fast as anyone," McGuire said.

The posse weekly practices throughout the summer season have become a family affair with wives and children coming to the county fairground arena at Elter to visit and watch the men go through their skill and riding maneuvers.

The wives take turns bringing refreshments which always end the practice sessions.

"It takes two big cakes and a large coffeepot," Mrs. McGuire said.

Admitting that keeping riding horses is an expensive hobby, McGuire stressed that he "couldn't have done it all these years" without the cooperation of his wife, Winnie.

The formation of the posse coincided with the McGuire's move into Twin Falls in 1945 from a farm south of Twin Falls which he had operated for 11 years.

He had contracted undulant fever and was advised by his doctor to get off the farm.

"Within six weeks we had a sale and moved into town," he said.

McGuire then got a job selling cars, but he was able to keep his riding horses in the pasture behind the house on Addison Avenue East where the McGuires have lived the last 36 years.

The horse he now rides in the posse drills is 18 years old, but McGuire always has a younger horse in training and currently is breaking a colt, Dondy, his present horse, has won many trophies for his mastery at the many area and state meets in which McGuire has participated.

Through the years he has been in the posse, McGuire estimates he has gone through about nine horses and five sheriffs. He used one horse for 17 years to lead the group. That animal lived to be 32 years old, but the last seven, McGuire said he "put him out on pension."

McGuire served as captain from 1952 to 1971, then health problems caused him to quit. But in 1976 he returned to the post which includes responsibility for working out the drills the posse uses in competitive events such as the Idaho State Posse meet scheduled here this weekend.

How does the captain figure out those intricate maneuvers which his bystander described as "looks like they would kill themselves but they don't?"

McGuire said he gets ideas from horse journals and picks up others at the shows the posse rides in

around the state. Sometimes other members also have ideas and they work it out together.

In his earlier years as head of the posse, the captain's position included that of president also, but that "got too much" and now there is a board of directors with a full slate of officers.

McGuire and his riders compete in the Wood River Riding Club Association jamores, perform at most of the county fairs throughout Magic Valley and travel to other events around the state, such as the Snake River Stampede at Nampa where they will compete for their 26th year.

The only charter member of the local group, McGuire also helped organize the Idaho State Sheriff's Mounted Posse in 1961 and has served as state president.

The posse captain can't remember when he learned to ride. Growing up on a farm he was always around horses. He was born July 17, 1904, in Grenola, Kan. In 1918 he came to Elter with his parents, Mr. and Mrs. M. McGuire, and graduated from the Buhl High School.

He met his future wife at an Easter picnic. When his sister asked him to be a group planner, McGuire replied he had no date, so his sister obligingly provided one.

That was in April 1925 and McGuire and Winnie Molander, whose father was a pioneer of the Deep Creek area west of Buhl, were married Feb. 24, 1926. They first farmed west of Buhl and then operated her father's place before purchasing a farm south of Twin Falls.

McGuire milked 25 head of cows, raised sheep and feed steers besides raising several crops. His farming years were before the advent of much of the labor-saving equipment farmers have today and it was hard, physical work.

"Farmers now have equipment to take all the back-breaking labor out of farming," he said.

McGuire retired from his sales

Posse captain, D. A. McGuire, with his prize winning horse, is a sheriff's deputy

job seven years ago. His riding remains his major activity. He doesn't golf or bowl but likes big game hunting. And in addition to the formal riding with the posse, McGuire also enjoys trail riding, something which he has shared only with his own children, but grandchildren.

When the Junior Riding Club was active here, McGuire would take the youthful riders on trail rides. "Once it rained so hard the kids were running all over trying to find

shelter," he recalled. The McGuire's own eight grandchildren all have learned to ride with him and two of his grandchildren have spent summers with their grandparents.

The McGuires have two children, Norman McGuire of Hansen, and Carol Skinner of Salem, Ore.

Every fall after the posse season closes with the conclusion of the Twin Falls County Fair, McGuire takes all members to the South

Hills for a steak fry.

Last year, just as the riders were bedding down after their feed, word was brought at 2:30 a.m. that a boy was lost on Deadline Ridge.

By daylight posse members were out searching for the child who was found by other officers.

McGuire believes riding and ownership of horses is a healthy project for young people and a strong deterrent to delinquency.

Besides, he says, "riding keeps you young."

Man's age depends on activity, woman's viewed from calendar

By ELLEN MAY GOLDBERG
© Chicago Sun-Times

When is a person old?

There is no simple answer to that question. Twenty years ago that identical question was asked of a cross-section of the American public aged 21 and older. The answer is "the same today as it was then."

Regardless of his calendar age, the public viewed a man as "young" or "middle aged" as long as he was vigorous and active. A woman's age, however, was considered to be more closely related to her calendar age, writes Ethel Shanas, sociologist at the

University of Illinois in Chicago.

The way the public sees it, a man is as old as his activities, a woman as old as her birthdays. In this country, 65 is used to define the beginning of old age. When the United States enacted the Social Security Act in 1935, 65 was selected as the age at which full retirement benefits were available to workers.

Shanas writes in "Family, Support Systems and the Aging," a paper prepared by the National Retired Teachers Association, the American Association of Retired Persons and Wakefield, Washington, Associates, that all the research available shows that people grow old at different

rates. One person may be physically old at 60 while another is young at 75. There are more differences in functional capacity among persons aged 80 to 90 than among a group of 20 year olds.

People aged 80 and older were rare in the United States at the turn of the century. Between 1960 and 1977, the percentage of the population age 65 and older more than doubled — from 4.1 percent or 3.1 million people, to 10.9 percent or 23.5 million people. Older persons may compose as much as 19 percent (32 million) of the total population by the year 2000. Now there are more than 2 million Americans 85 years of age and older.

Perhaps the most important change is occurring within the aging population as a whole. The so-called "old-old," those older than 75 increased tenfold since 1960, and between 1960 and 1970 at three times the rate of those 65-74. By the year 2000, 45 percent of the older population will be older than 75.

This increase in the very-old population will have a dramatic effect on every phase of living; and on every phase of supportive service and care. Think of the changes that must come in the areas of health care, housing, financial aid and long-term constant care for older people who choose to remain in their own homes. And there

will be many more retirement homes, day-care centers, nursing homes and small homes for communal living.

Families which care for older members should be helped financially. A tax program that would facilitate care of an older person in a family setting, including specific tax write-offs for expenses and income tax relief should be adopted.

"Old people and their families are the new pioneers of our era," writes Shanas. "They have ventured into uncharted areas of human relationships and developed systems of exchange and interaction without help or guidance from so-called helping agencies. Astronauts and space

vehicles have guidance systems. Old people and their families have only those traits that distinguish human beings from other animals: love, sympathy and the ability to empathize one with another.

"There is one area, however, in which old people do have a role and a safe haven. That safe harbor is within the family. The future is uncertain for the old as it is for all of us. Family and kinship ties, however, have been amazingly resilient through millennia. They may be different for old people in the future from what they are now, but they will continue to provide safe harbor for their members, however long they may live."

Nathalie Zamoyksi, 86, and daughter, Christine, 53, now live on small farm in Maine

Polish life recalled

KENNEBUNK, Maine (UPI) — Ed Panek still sits in an armchair, 86-year-old Nathalie Zamoyksi reads a letter from a Polish friend signed, "One of the 11 million of Solidarity."

"They don't know what's going to happen from day-to-day," the white-haired, green-eyed woman says in her broken English. "They have nothing, only enormous queues for everything, including bread."

Life 50 years ago for Mrs. Zamoyksi was anything but uncertain, rather a garden of abundance on her 110,000-acre estate called "Adampol" near the eastern Polish town of Wlodawa.

The 40-room house of Konstancy and Nathalie Zamoyksi was surrounded by forests in which there were wild boar. There were so many servants a Catholic church was built on the estate. Her jewelry box overflowed with diamonds and black pearls.

That was before the Germans marched into Poland in the late 1930s and early 1940s. The jewels soon proved priceless "pebbles."

The Gestapo seized Adampol, which means Adam's field, grabbing those brilliant "gems" and "throwing" Mrs. Zamoyksi's husband into prison.

When the family was finally able to flee Russian-controlled Poland in 1957, Nathalie found herself cleaning toilets at Boston's New England Conservatory of Music — a Catholic aristocrat turned custodian.

Mrs. Zamoyksi and her daughter, Christine Panek, are landowners once again — presiding over five acres of fertile soil surrounded by southern Maine's blueberry plains.

And they're happy.

"I love it. I've always loved gardening, and I've always loved earth, the soil, it's so clean," Nathalie said. "I'm 86. I can't do much."

But she spends at least three hours in the garden every day, clad in boots and long green apron, tilling the soil by hand for beans and corn.

The six-room gray wooden house owned by mother and daughter is filled with a fresh litter of young dachshunds — and mementoes of a life that was, that shall never be again.

Photo albums capture three different estates: "Kruszynka" in central Poland, former home of Nathalie's mother, "Rozanka," her father's homestead, including a 14th century castle destroyed in World War I, and "Adampol," built during the 1920s on the same site as "Rozanka."

Christine Panek was 14 when the Gestapo seized Adampol in 1942 and killed 30 prize race horses, stabled there. The Germans forced her to dig up Russian land mines poised to explode in eastern Poland.

"The Germans trained us how to do it because they wanted us as labor and not all blown up," said Mrs. Panek, who escaped from a Russian jail after the war, settling in 1947 in Boston.

None of the family are Jews, but Mrs. Panek's husband Julius, a Polish judge, was thrown into four concentration camps during the war, including Auschwitz and Dachau.

He later served as a translator during the Nuremberg war crimes trial — for Polish Jews describing their role as "guinea pigs" in the Auschwitz medical laboratory.

Mrs. Panek and local writer Fred Holmberg have completed a book on the family's experiences, tentatively titled "Zamoyksi — A Story of Poland," describing the years from Christine's birth to shortly after her prison escape.

It is the story of those jewels that Nathalie Zamoyksi remembers best.

Her husband Konstancy was condemned to death as a political pris-

oner in 1943 after suffering severe beatings.

A German lawyer knew the gem-seizing was illegal under wartime law of the Third Reich. He told Mrs. Zamoyksi he could secure her husband's release for a price — half the jewels he recovered. She agreed.

Zamoyksi was released from jail within two weeks. German authorities surrendered the gems; Nathalie and the lawyer divided the treasures.

"I was so glad he was freed, I wouldn't have minded giving him all the jewels," she says. "I think he was very honest to give me half."

The gems came "from great-grandfathers and grandfathers and were something fantastic," said Christine Panek. "But when it came to getting my father out of prison their value suddenly changed from jewels to just pebbles."

Konstancy Zamoyksi, who became a security guard at Boston's Museum of Fine Arts, died in 1963. Julius Panek died in Boston in 1968.

Nathalie worked at the music conservatory until 1974, becoming chief housekeeper. The school gave her a professor's chair upon retirement.

"She visited her younger sister in the Polish city of Krakow five years ago. "It's about the same as when the Germans were there," she said. "There's this feeling when you speak that you always look around, which is very annoying."

Adampol, to which she did not return, is now believed to be a medical center.

"I'm afraid it will end with the Russians coming," Nathalie said. "If they think it's too great a risk they won't come, but if they see they can come like Afghanistan, they will."

Christine Panek had become good friends with Boston with Anna Roberts, widow of novelist Kenneth Roberts.

WATCH FOR THE ARTS & CRAFTS SHOW JUNE 24th THRU 26th

Among the old homes which will be open to the public during Saturday's historic home tour are the Howell house, left, and the Marcus Funk home

Tour of historic Oakley homes set Saturday

OAKLEY — A number of proud property owners in Oakley will put their historic old homes on public display Saturday.

The annual Historic Oakley Home Tour will begin at 10 a.m. Saturday and continue until 2 p.m. with walking tours through the community each half hour.

Guided tours begin at the old Opera House where tour tickets may be purchased at \$2.50 per person. Following a brief slide show about early Oakley and its elaborate old homes, members of the sponsoring organization, Historic Oakley Inc., will conduct walking tours to the open houses and past other historic buildings. The walk takes about two hours but

is a slow, easy walk, sponsors say. Marge Woodhouse, member of Historic Oakley Inc., said for those who have made the tour before, there will be some new interesting buildings. At least five homes are scheduled to be open for public visits.

New this year is the old Cutler Worthington three-story stone and wood building. This was built at the turn of the century and exemplifies the old Victorian architecture with several towers and an elaborate heavy stairway and fireplace.

It is now owned by Oakley City Councilman Jon Roundy, who also teaches art at the Oakley High School. It is still undergoing restoration but tour participants will be

able to see parts of the home as it was in 1900.

Woodhouse said the home cost \$30,000 to build, quite a price in 1900, but she added during the depression days it was offered for sale at prices reportedly ranging from \$500 to \$3,000. The home covers 2,000 square feet of space and boasts five porches.

Woodhouse said opening the homes to the public is strictly up to the owners and some have cancelled out in past years at the last minute. At least five homes are now scheduled for display.

Old favorites will include the ornate home built of Oakley brick by Judge B. P. Howells. This two-story building with ginger-

bread decorated porches and circular towers has been authentically restored and featured in previous tours.

The Jacob Dayley home, built in 1898, will also be included this year as will the Marcus Funk home.

A driving tour which is available to participants will include the refurbished old Oakley Depot.

Woodhouse said this is located just west of town on its original site. It now features a reception area on the first floor that is used for community gatherings and several offices on the second floor.

The second floor also includes hotel rooms often used by persons interested in studying or visiting historic Oakley sites and

structures. The interior of the depot features samples of many types of Oakley stone from the nearby mountains which are used in buildings and building decor.

"Historic Oakley Inc. was organized in 1972 by Kent Hale and several other history enthusiasts. The organization's goal is to encourage appreciation for the old buildings and preservation and restoration of early homes and business buildings. Funds from the annual tours help accomplish this goal."

The opera house, where the tour begins, is one of these. It was built by Judge B. P. Howells in 1904 and served as a cultural center for Oakley and many other pioneer

communities. Like many other early structures it is made of Oakley brick.

Woodhouse said Oakley, being one of the earliest established towns in Magic Valley, has long been known for its large brick homes.

"While some later communities consisted of log cabins and clapboard shacks, Oakley was building beautiful brick business and residential structures. There are probably 50 or more of these dating from 1880 to 1915 in the community," she said.

"During the tour, refreshments will be available at the Oakley City Park, furnished by the Oakley Quick Response Unit."

Boise State University reports dean's list for spring semester

MAGIC VALLEY — Boise State University has named 1188 students to the spring semester dean's list for their "high academic achievement," according to vice president for student affairs, Dr. David Taylor.

Magic Valley students include Wade B. Bond, mathematics, Cynthia L. Crow, advertising design, Terry W. Johnson, machine shop, Edward G. Valasquez, economics, and Vance Lee Wonderlich, accounting, all Twin Falls; Letha A. Bartlett, marketing, mid-management and Donald L. Strickler, pre-engineering, both Buhl.

Wendy L. Schwarz, pre-forestry and wildlife management, Eden; Marlene M. Hurley, graduate school, Fairfield; Christine R. Gregg, elementary education, Piler; Julie E. Pearson, management, Gooding; Ronald C. White, drafting technology, and Mary H. Wilson, elementary education, both Hagerman.

Wendy Berkeley Collins, pre-medical studies, Stephen L. Durham, information sciences, and Maureen A. McGonigal, child care, all Halley; Nancy L. Carpenter, elementary education, Hammett; Alice Marie Myers, physical education, Heyburn; Richard D. Crister, communication, Jerome; Susan M. Jessor, graduate school, Kimberly; and Jayne L. Parker, elementary education, Rupert.

Those receiving high honors are James R. Blitzenburg, geology, Deborah Jo Colner, elementary education, Cade L. Lawrence, construction management, and Earl L. Sherry, theatre arts, all Twin Falls; Karla Ernestine Meier, physical education, Buhl, and Tomita S. Schwarz, pre-dental hygiene, Eden.

Patricia D. Harms, accounting, Filer; Alma M. Wertz, accounting, Glenns Ferry; Debra K. Bauman, elementary education, and Michelle M. LeFurgey, social work, both Gooding; Douglas E. Black, accounting, Hammett; L. A. Allison-Vanhozer, physical education, Jerome, and Stephanie S. Miller, academic, Kelchum.

Kelli R. Fillmore, communication, Kimberly; Paul D. Saras, accounting, and Susan H. Schenk, physical education, both Rupert, and Richard B. Webb, mathematics, Shoshone.

Students receiving honors are Darrell L. Bowman, management, Gregory P. Edson, elementary education, Matthew B. Engel, accounting, Robert E. Hobbs, economics, Dana L. Marcellus, communication, Bryan J. Matsuoaka, elementary education, Jennifer A. Osterkamp, pre-dental, hygiene, Joseph P. Osterkamp, pre-medical, Diana C. Saville, accounting, and Tamra J. Stansell, accounting, all Twin Falls.

Laurea L. R. Elliott, social science, Bliss; Mark J. Guerry, general arts and sciences, Chris E. Honick, chemistry, Barbara Jean Kulik, accounting, Julia L. Nash, communication, Laurie L. O'Brien, elementary education, and Lyle R. Staley, Jr., mathematics, all Buhl.

Leslie S. Taylor, elementary education, Burley; Christopher M. Ridinger, respiratory therapy, Dietrich; Tamara J. Schwarz, physical education, Eden; Bob W. Stroud, political science, Fairfield; Ronald L. Belliston, accounting, and Anthony M. Grzan, physics, both Glenns Ferry.

Joel T. Dixon, pre-engineering, Debra C. Fraser, management, Catherine M. James, pre-home economics, and Amy M. Patterson, radiologic technology, all Gooding; Twyla R. Butcher, physical education, and Debbie D. Suh, social work, both Jerome.

Rebecca L. Meyer, management, Kimberly; Steve O. Durfee, health sciences, Sara S. Fisher, communication, Madonna P. Stroschein, mathematics, and Thomas R. Wright, social science, all Rupert; Tom M. Bellia, general business, Shoshone; Elizabeth A. Barker, nursing, Sun Valley; Patricia D. LuRue, office administration, and Lisa M. Peterson, information science, both Wendell.

Mork and Mindy will be first mixed marriage

SALT LAKE CITY (UPI) — Mork and Mindy will be wed in their first mixed marriage of an alien and an earthling, announced the producer of the television series, in which they star.

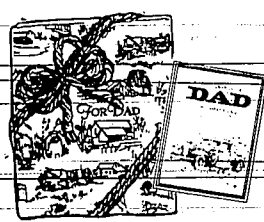

Garry Marshall, who created and

produced such TV shows as "Mork and Mindy," "Happy Days" and "The Odd Couple," told a University of Utah audience Wednesday of the pending nuptials, scheduled for next season.

"Mork and Mindy will get married on the planet Ork. It will be the first mixed marriage of an alien and an earthling. They will have a baby, except in this case Mork will have the baby," the producer said.

Danger of right turns stressed

By LOU COTTIN
Newspaper Enterprise Association

It could have been a disaster! The green light was shining brightly. A car made a legal right turn on red. It missed me by a few inches. The driver swore at me. I swore back.

Some of you may remember my previous column that contended that right turns on red are dangerous — especially to older people like me, to the handicapped and to children.

Some new statistics further substantiate my views. A headline in the Dec. 11, 1980,

edition of the New York Times noted: "Study asserts turns on red cause 20 percent rise in intersection accidents."

The story reported that the Insurance Institute for Highway Safety had gathered information from police departments in six states that had adopted right-turn-on-red laws between 1974 and 1977.

The analysts estimated that if similar laws had been enacted in the same period in all states, 20,000 additional accidents would have resulted each year. And 1,400 of them would have involved pedestrians.

In urban areas, said the Institute, pedestrian-vehicle accidents in-

creased 79 percent and collision between vehicles increased 25 percent. Overall, accidents involving a pedestrian and a vehicle increased 59 percent.

OK. Let's go to U.S. News and World Report, which disclosed in its Dec. 22, 1980, issue that "accidents soared since the (right turn on red) rule became common."

"The report noted that the government planned to complete its own study of turns on red this year. 'If there is a serious hazard,' a government spokesman was quoted as saying, 'we will try to develop measures to reduce the risk of right turns on red without losing their energy and time advantages.'"

Reception planned for artist conducting workshop in Twin Falls

This painting of LaVere Hutchings took two first place awards this year at San Francisco

By TRUDITARIO
Special to the Times-News

TWIN FALLS — LaVere Hutchings holds up a strange-looking watercolor — three boxes stacked in ascending order on a plain before three mountains.

"This is what I use in all my classes," he says. "I have the students duplicate this picture and, you'll notice, the mountains and boxes are in different values of the same color, from light to medium to dark."

Values and the control of the media are what the California artist stresses in all his workshops. He is in Twin Falls this week giving a workshop sponsored by the Canyonside Gallery. For the past 12 years Hutchings has made his living as a watercolorist.

"The public is welcome to meet the artist at a reception tonight at the Canyonside Gallery between 7 and 9 p.m. The show is one of the largest ever held in Twin Falls, with the net worth estimated at close to \$100,000. Many of his award-winning works are on exhibit there through June 20.

"A watercolorist has to have the ability to plan ahead. Watercolors are fast. You can have your picture in the mat and frame and on the wall in one day. But you can't make many mistakes with watercolors — they fight back."

"Watercolors are luminous; they sparkle," he says. "And they're more permanent than oils."

Hutchings began his painting career in the coal chute of his Idaho Falls home some 35 years ago. His children used to peer at him through the cracks as he worked. Now he's enlisted them as agents. His daughter, Jean-Hundhausen of Twin Falls, helped organize the workshop and gallery show.

His is a success story. He lives in Jamestown, in the colorful Mother Lode Country, where he runs his own art school and gallery. He's a member of the National Watercolor Society, Watercolor West, Whiskey Painters of America, Society of Western Artists and many others.

Says his wife Ann, "We try to keep the information on the brochures current, but so much is happening all the time we can't begin to list it all."

His work hangs in nine galleries along the West Coast, at the Eagle Rock Gallery in Ketchum and, most recently, at the Canyonside. Over 2500 of his watercolors are hung in private and public collections.

He's juried many exhibits, most recently the Barenzo Wine Show in

Lodi, Calif., this year.

His "Old House at Coulterville" won first place at the Society of Western Artists Show in San Francisco in 1980. "Banty Rooster" took two first place awards at the same show this year, as well as first place in this year's Gallo Win Show.

Hallmark, Inc., has purchased reproduction rights to four of his paintings, some of them scenes along the Snake River. He has written two books for the Walter Foster Art Books series — "It's Fun to Paint Old Shacks and Barns" and "It's Fun to Paint Roads and Rivers." The November issue of Palette Talk, published by Grumbacher, will feature him.

Hutchings has a book on composition and design and a slide/cassette program in the works, both due out in 6-8 months.

"I'd be interested to bring some of my Western art here sometime. I had quite a few pictures of horses but they were all bought just before we left," he said.

Trudi Tario is a free lance writer living in Twin Falls.

Western trend grows in jewelry

NEW YORK (UPI) — The western trend in jewelry that began several years ago is stronger than ever because of President-Reagan's interest in horses, says Rae McCulloch, fashion director of the Jewelry Industry Council.

"Western rings for men are designed with horses heads, galloping horses, saddles, lariats and horse-shoes, she says, and similar themes are used in pendant jewelry for men and women."

Engagements

Vicki Stimpson

TWIN FALLS — Mr. and Mrs. J. Oscar Stimpson announce the engagement of their daughter, Vicki, to John David Snow Murray.

He is the son of Mr. and Mrs. Herbert F. Murray Jr. of Salt Lake City.

Miss Stimpson will continue attending Brigham Young University studying Fashion Merchandising and Communications. She has fulfilled a mission for the LDS Church in Philadelphia, Pa. and is a dental receptionist for Dr. Roy A. Hammond of Provo, Utah.

Murray is majoring in design and graphics technology at BYU and is currently working with the David O. McKay Institute of Education. He has fulfilled a mission in Barcelona, Spain.

They will be married June 26 in the Salt Lake City LDS Temple.

Ex-lover won't pay

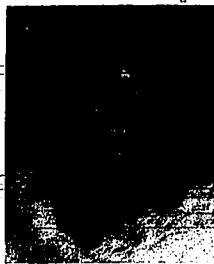

TRENTON, N.J. (UPI) — A woman has been told she has no right to receive money for her dental and doctor bills from her ex-lover while a "palimony" suit against him is pending.

The Appellate Division of Superior Court acted Tuesday to throw out a lower court judge's order that Sergio De Gioia pay Rose Crowe \$125 a week while she seeks permanent support payments from him.

De Gioia also had been ordered to pay Ms. Crowe's future medical, dental, drug and other bills and to give her exclusive use of his house. The suit said he left her because he decided to marry another woman.

The appeals panel overturned that decision but Ms. Crowe's attorney, Anthony Vignuolo, said his client would appeal.

"She supported him in the terms of a housewife relationship," Vignuolo said.

Julie Heath

SHOSHONE — Mr. and Mrs. Eldon Heath of Shoshone announce the engagement of their daughter, Julie, to Scott Manton.

He is the son of Jim Manton and Donna Rivera, both of Verba, Calif. Manton is a 1980 graduate from Shoshone High School and is employed by the Union Pacific Railroad.

Miss Heath is a 1981 graduate of Shoshone High School and is employed at the Shoshone swimming pool as a life guard.

The couple plans a June 26 wedding at the Community Methodist Church in Shoshone with Rev. Ron Bordon officiating.

Judy Hollifield

GOODING — Mrs. Betty Hollifield of Gooding announces the engagement of her daughter, Judy Jo, to Brooke Hershey, son of Mr. and Mrs. Hugh Hershey of Sturgis, S.D.

Miss Hollifield is the daughter of the late Robert M. Hollifield. The couple plans a July 13 wedding at the United Methodist Church in Gooding.

Having a will termed important Heartline

© Musick Productions

Heartline is a service for senior citizens. Its purpose is to answer questions and solve problems. If you have a question or a problem not answered in these columns, write to Heartline, 114 East Dayton St., West Alexandria, Ohio 45381. You will receive a prompt reply, but you must include a self-addressed envelope. The most useful replies will be printed in this column.

HEARTLINE: I cannot convince my husband of the necessity of making a will. Without even consulting an attorney, he has convinced himself that if he dies with no will, everything will come to me anyway. I know that this is what he desires, but I also think that if he dies with no will that I may not get everything, as he expects. We do not have a lot of property or money, but what we do have would make a difference in whether I have a secure future or not. Can you give us the facts about this? C.F.

ANSWER: When there is no will, the court will appoint an administrator, which is the same as an executor when there is a will. Most often, the wife is appointed administrator, and she generally will need the assistance of an attorney. In cases where there is no will, the assets must be dispersed according to the precise laws of the state. In most cases, if the husband would inquire into these laws, it would provide the incentive to encourage him to write a will. For example, in many states the estate is divided roughly by one-third going to the wife and two-thirds being divided equally among any children.

But in other states, the wife and children receive equal amounts. For instance, if there were five children, the wife would only receive 1/6 of the estate. And, of course, the courts cannot take into consideration any special need of the wife. It is very cut and dry.

And in most cases where the husband leaves no will, the wife is left with much less than she will need in the future for her own financial security. And if the children opt to give their share to their mother, then they will be required to pay gift taxes and various other taxes on the amount.

So, regardless of how little you own, your husband needs to have an attorney draw up a will for him. Just consider that if the only assets your husband has are tied up in your home, which you own free and clear, if he dies leaving no will, you can be forced to sell your home to share those assets with other beneficiaries of the estate. We sincerely hope that you will show this column to your husband and that it will have the desired effect.

HEARTLINE: My wife and I will be selling our home and moving to a warmer climate when I retire in a few years. I have worked hard during my life and we have traveled very little. We are saving and saving to put five children through college made it impossible for us to take many vacations or do any traveling until now.

We want to look around some and decide where we will spend our final years. Can you tell us where to get information on various cities or areas throughout the country to help us decide where to begin looking? W.W.

ANSWER: Heartline has just published a book titled — Persons Relocation Handbook — 175 Cities and Towns from Which to Choose.

This handbook has a wealth of information, fact and figures on over 175 cities in 38 states, including the

sunbelt area. For each city, town or specific area, this book lists the number of hospitals, hospital beds, number of physicians and dentists and nursing homes.

Also included is information on climate, crime rate, average costs of housing and rent — even the number of golf courses in the area. You will also find information explaining the services available to the retiree, such as senior citizen centers, clubs, transportation, meals programs, legal aid, senior citizen activities and the newspaper in each area, plus much more. To order your copy of this book, send \$7.95 to Heartline's Relocation Handbook, 114 East Dayton St., West Alexandria, Ohio 45381. Remember that all Heartline publications carry an unconditional money-back guarantee if you are not completely satisfied. Please allow six weeks for delivery.

HEARTLINE: As far as Medicare is concerned for nursing home eligibility, what do they mean when they say they will not cover custodial care? What is custodial care? K.D.

ANSWER: Custodial care is care that can be given by persons without professional training or skills. In other words, if you need help with walking, bathing, dressing, eating, getting in or out of bed or taking medicines, or other things that family or friends could help you with, then your condition would be considered custodial and Medicare would not cover you.

Daily recipe

Helen Swanson

Rt. 4, Jerome

PINEAPPLE GLAZED APPLE PIE

- 1 1/2 cup unsweetened pineapple juice
- 1/2 cup sugar
- 7 tart medium apples, peeled, cored and cut into wedges, about 7 cups
- 3 tablespoons cornstarch
- 1 tablespoon butter or margarine
- 1/2 teaspoon vanilla
- 1 teaspoon salt

1 baked 9 inch single crust pie shell, cooled

In large saucepan combine 1 1/2 cups of the pineapple juice and the sugar. Bring to a boil. Add apple wedges. Simmer, covered for 3 to 4 minutes or until apples are tender but not soft. With slotted spoon lift apples from pineapple liquid. Set apples aside to drain. Blend the remaining 1/2 cup pineapple juice slowly into cornstarch, add to hot pineapple liquid in saucepan. Cook and stir until mixture thickens and bubbles. Cook 1 minute

more. Remove from heat. Stir in the butter or margarine, vanilla and salt. Cover and cool for 30 minutes without stirring. Pour half the mixture into the baked pie shell. Spreading to cover bottom. Arrange cooked apples on top. Spoon remaining mixture over apples. Cover and refrigerate until chilled. Serve either with whipped topping or vanilla ice cream.

Doormats useful

NEW YORK (UPI) — Doormats can be just as useful in summer as in winter. A rough- or brush-textured mat just outside the door and a small, washable mat or rug just inside can minimize the amount of outdoor soil tracked indoors — even in warm weather, says the Soap and Detergent Association.

The indoor mat should be washed often. It's also a good idea to provide an area just inside the door for wet or muddy coats, boots and shoes.

Weddings

MR. AND MRS. SAM WISEMAN

Storteboom-Wiseman

TWIN FALLS — Charlie Storteboom and Sam Wiseman exchanged wedding vows May 24 in the United Methodist Church in Twin Falls.

The Rev. Fred Storteboom of Seattle officiated with the Rev. Ernest Wilson of Twin Falls, assisting.

The bride is the daughter of Gini Storteboom of Seattle and Don Clark of Anchorage, Alaska. Duke and Ora Lee Wiseman of Twin Falls are the parents of the bridegroom.

Nancy Storteboom, sister of the bride, was maid of honor. Bridesmaids were Sandy Smith, Joni Suhr and Ann Wiseman. The best man was John Perkins, with Jeff Wiseman, Andy Wiseman and Ken Lindgren

serving as groomsmen. Chris Wiseman, nephew of the bridegroom, was the candlelighter and ringbearer. Ann Wiseman, sister of the bridegroom, was accompanied by Helen Connolly on the organ.

A buffet dinner reception was held at the Wiseman home, following the ceremony. Assisting with the reception were Helen Coleman, Edith and John Stephens, Helen Tomlinson, Hazel Nelson, Edith and Elizabeth Glibney, Lynda Wiseman, Loreen Toothman, Patsy Clark and Gini Storteboom.

Following a trip to Sun Valley and Clarendon, the couple will reside in Spokane, Wash. Both are students at Whitworth College in Spokane, Wash.

MR. AND MRS. DOUG NEWBRY

Legg-Newbry

TWIN FALLS — Kelly Legg and Doug Newbry exchanged wedding vows June 5.

The Rev. Jim Tubbs officiated the ceremony at the First Christian Church in Twin Falls. Mary Nelson served as piano soloist.

The bride is the daughter of Stan Legg of Ontario, Ore., and Mrs. Stan Legg of Twin Falls. The bridegroom is the son of Mr. and Mrs. Ron Newbry of Twin Falls.

The bride wore a floor length gown of polyester chiffon trimmed with lace and carried a bouquet of silk roses and carnations.

Matron of honor was Jamey Jenkins with Janelle Newbry, cousin of the bridegroom, serving as bridesmaid.

Doug Legg served as best man and groomsmen was Jeff Newbry, brother of the bridegroom. Ringbearer was Dustin Rogers, cousin of the bride, and Larissa Caster was flower girl. Ushers were Dary Newbry, cousin of the bridegroom, and Andy Anderson, brother of the bride.

At the reception following the ceremony Arlean Newbry, cousin of the bridegroom, registered guests. Denise Rogers, cousin of the bride, and Debbie Tucker, aunt of the bridegroom, were in charge of the gift table.

Special guests were Mr. and Mrs. Mark Watts and Mr. and Mrs. Robert Newbry, all of Twin Falls, grandparents of the bridegroom, and Mrs. Lavilla Legg of Kimberly, grandmother of the bride.

A dinner was hosted by the bridegroom's parents at Kalo's.

The bride is a graduate of Twin Falls High School and is employed at Fox Chiropractic Life Center in Twin Falls. The bridegroom graduated from Twin Falls High School and the College of Southern Idaho and works at Swensen's Market.

After a trip to California the couple will reside in Logan, Utah where the bridegroom will attend Utah State University.

Third infantry sets meet

ST. PAUL, Minn. — The Society of the Third Infantry Division, U.S. Army, will hold its 62nd annual reunion Sept. 9-12 at the Radisson Plaza Hotel in St. Paul, Minn.

Many famous people have served in this regular army division. Among them, President Dwight Eisenhower, Generals George C. Marshall, Lucian K. Truscott, Jr., and John "Iron Mike" O'Daniel and James Arness (Gun Smoke) and Audie Murphy, the most decorated soldier of World War II.

The Society is composed of 3rd Infantry Division veteran of World War I and 2, the Korean conflict as well as those who have served in peacetime or in attached units. Wives, fathers, mothers, brothers, and sisters, sons and daughters are also eligible for affiliation with the Society and will be welcome at the sessions.

Anyone desiring further information should write to Tom Rafferty, 1201 Hubbard Ave., St. Paul, Minn. 55104, 612-645-7809.

Most swimming pools privately owned

PITTSBURGH (UPI) — There are about 1.9 million swimming pools in the United States, more than 1.5 million of them private, family-type pools, according to PPG Industries. The company, which manufactures

chemicals for pool treatment, offers a 16-page booklet, "Come On In! The Water's Happy!" which may be obtained from PPG Industries, 1 Gateway Center, 10 North, Pittsburgh, Pa., 15222.

Valley happenings

Kimberly Recreation unit sets meet

KIMBERLY — The Kimberly Recreation Council invites residents for coffee and donuts at 10 a.m. Saturday at the community center.

This meeting is for all interested parents who want to come hear the plans and programs planned for the children in the community this coming year. In order for the council to continue, members need some input from the community they serve.

If you have any questions or complaints, please come Saturday to the Community Center.

Dairy Wives plan home tour

TWIN FALLS — Magic Valley Dairy Wives will hold a Parade of Homes Saturday from 10 a.m. to 4 p.m.

Lunch will be provided. For more information call 543-6567, 543-5966 or 324-7455.

Open house Sunday for J. O. Eslinger

TWIN FALLS — J. O. (Oscar) Eslinger will be honored with an open house Sunday in observance of his 91 birthday.

Friends and relatives are invited to his home, 759 Newport Street, between 2 and 5 p.m.

Eslinger was born in Cedar County, Miss. in 1890 and moved to Idaho in 1919, where he was engaged in farming until his retirement.

Energy tour scheduled June 25

TWIN FALLS — The University of Idaho Home and Energy Tour with Myrna Kastner, housing specialist, Twin Falls County, will be held June 25.

The tour will include solar homes, underground homes, window treatments, wood heating and solarium, greenhouses.

Bus transportation is provided, departing at noon from 634 Addison Ave. W., Twin Falls. Cost of \$2.50 should be prepaid by Monday.

For more information call 734-3300 extension 46.

Valley Quick Response sets auction

HAZELTON — The Valley Quick Response will have a booth and auction at the Hazelton July 4 celebration.

The event will begin at 6 p.m. June 27 at the Hazelton City Park. Anyone with items to donate should contact Jerry Lankford at 829-5029 or Judy Holland at 829-5679.

Buhl class of 1971 plans reunion

BUHL — The Buhl High School Class of 1971 is having its 10-year reunion July 11 and 12.

Anyone who was a member of that class and has not been notified by mail of the reunion should contact Sheila Johnson, Knerter, 1050 Sparks, Twin Falls, 83301, phone 733-4046.

Miss-Idaho Teenworld pageant set

IDAHO FALLS — The second-annual Miss-Idaho Teenworld Pageant will be held in Idaho Falls Sept. 4-6.

The pageant is the official state preliminary for the Teenworld National Pageant to be held in Atlanta, Georgia in December of 1981.

Contestants must be single, American citizens and 14 to 18 years of age and maintain a "B" or better school grade average. Judging for the pageant is based on scholarship and civic achievement, appearance, poise, personality and a choice of speech or talent competition. There is no swimsuit competition.

Any Idaho girls interested in further information or an application blank should contact Ann Rydick, Idaho State Teenworld director, 3824 E. Seventh St., Idaho Falls, Idaho 83401.

Filer class slates float trip

FILER — Members of Filer High School class of 1966 will celebrate their 15th year reunion with a float trip down the Salmon River.

The trip is planned for the first weekend in August.

For more information write or call Juanita Silgar Eslinger, 809 Apache Way, Twin Falls, 733-3510 or Gayla Lossler Lesley, P.O. Box 1382, Salmon, Idaho 83467, 756-2047.

Pancake dinner will be all day

BUHL — Serving at the West-End Senior-Citizen-Center's pancake dinner June 22 will be all day, from 11 a.m. to 6:30 p.m.

Proceeds from the event will be used to purchase a new dishwashing unit for the center. About \$2,000 is needed for the project, according to Diane Van Hoosen, site manager.

Tickets for the pancake dinner are \$2 for persons over 10 years of age and \$1 for children under 10.

Dr. Lamb

Problem may be apnea

By LAWRENCE LAMB, M.D.
Newspaper Enterprise Association

DEAR DR. LAMB — In my mid-30s I started having periods of noisy breathing during my sleep.

Most disturbing to my wife was that sometimes I would stop breathing for a while and then gasp for air.

At about age 40 I would wake in the middle of the night with the feeling of smothering. I would gain air by rolling to a face down position. At age 56 I had a grand mal seizure.

I was put on anti-convulsant drugs and warned to limit coffee and liquor. I still had seizures about every six months until three years ago after I mastered the art of sleeping face down. All of my seizures have been at night and I can start one by sleeping on my back.

Recently I read about sleep apnea. How can doctors classify me as epileptic when I have such a history?

DEAR READER — When you were first diagnosed, sleep apnea was not described. I can't be sure that is your problem but your story certainly sounds like it.

Everyone who has convulsions does not have epilepsy. A person with a very slow heartbeat from heart block may have a seizure from lack of oxygen supply to the brain. The

treatment is a heart pacemaker, not anti-convulsant medicines. There are many other causes of convulsions, too. If there is a failure to supply oxygen to the brain for any reason, it can cause convulsions.

I would like to suggest that you ask your doctors to send you to the nearest sleep center for studies. They may be very interested in your unusual case.

Sleep apnea has been popularized in recent years because it is new but it is a relatively infrequent cause for problems in sleeping. I am sending you The Health Letter No. 10-6, Sleep and Insomnia, for more details. Others who want this issue can send 75 cents with a long, stamped, self-addressed envelope for it to me, in care of this newspaper, P.O. Box 1531, Radio City Station, New York, NY 10019.

I would like to see anyone who has a history of stopping breathing during sleep have a careful study. It may be one factor that causes men to have heart attacks more frequently than women. Men seem to be more prone to the problem. It is related to the respiratory reflex center in the brain.

DEAR DR. LAMB — My son was extremely heavy but with careful dieting he lost more than 100 pounds.

His flesh has firmed up very well except for fatty breasts. Our family doctor has approved weightlifting but was at a loss to suggest a particular

exercise to reduce the breasts. We would appreciate any help or exercise program you can suggest.

DEAR READER — Hardly some medical problems can cause this condition but I am sorry to tell you that there is no such thing as spot reducing. Exercising the chest muscles alone will not eliminate breast fat. It is still the old story of a balance between calories taken in and calories used. As your son continues to increase his use of calories through a generalized exercise program and diet control, he will eventually eliminate those unwanted fat deposits.

Many people know that when you lose fat it tends to disappear last from the places where you want to eliminate it the most.

For localized breast fat, which some men are prone to have, if a reasonable exercise and diet program does not work, one can consider simple surgical removal of the fat pad.

Now you know . . .

By United Press International

The longest distance for a champagne cork to fly from an untreated and unheated bottle is 102 feet 11 inches.

LYNETTE POOL
...contestant

Area girl will enter contest

TWIN FALLS — Lynette Marie Pool, 18, daughter of Mr. and Mrs. Lyle E. Pool of Twin Falls, is a state finalist in the 1981 Miss United Teenager Pageant.

The pageant will be held at Idaho State University July 25 at 7:30 p.m. Miss Pool is a former student of Twin Falls High School. Her hobbies are reading, music, swimming and skiing.

She is sponsored by Dadds Insurance Agency, Ford Transfer and Storage, Electrical Apparatus Sales and Dr. Robert A. Ridgeway.

Middle-aged have generation problem

By HAROLD BLUMENFELD
Newspaper Enterprise Association

Readers of this column aren't all senior citizens.

Whether middle-aged or young, these readers also have problems.

And one problem that seems almost insoluble is the gap between adults and their aging parents.

Middle-aged people, hardly recovered from the trauma of raising their own children, now often face another generation gap.

They had dreams of a carefree life once the children were married or otherwise on their own.

Suddenly they are confronted with the pressing decision of what to do about their aging parents.

The elderly parent and the middle-aged child are both in critical stages of life, each with very special, very different physical and emotional needs. Sometimes these needs seem formidable.

Middle-aged children often find they are unprepared for the real, often destructive anxiety, guilt and personal responsibility they feel concerning their parents.

For them, Dr. Stephen Z. Cohen and Bruce Michael Gans have written an excellent book, "The Other Generation: The Middle-Aged and Their Aging Parents" (Follett Publishing Co., Chicago, \$10.95).

Cohen, a professor of social work at the University of Illinois, has as

teacher, consultant, therapist and lecturer helped many people in middle life achieve better working relationships with their parents and parents-in-law.

The authors write with sincere concern and compassion for people on both sides of this generation gap.

Throughout the book, they discuss guiding principles to improve relationships between the middle-aged offspring and the elderly parent.

Among their suggested goals for interaction are trying to prolong the independent functioning of the parent by whatever combination of means is necessary, guarding against becoming a martyr and involving one's siblings as much as possible in decisions involving the parent.

The authors stress the importance of remembering that parents in their 70s and 80s still have many physical and emotional strengths as well as needs.

But they warn that the elderly often suffer a great deal emotionally and physically when faced with dramatic changes — the loss of a spouse or close friend, the move to a new home, even retirement.

The book explains specific changes brought about by the aging process — such as loss of eyesight, hearing, touch, taste, smell, even sexuality — and how to minimize or compensate for them.

Health board backs Blaine water study

By BONNIE BAIRD JONES
Times-News writer

TWIN FALLS — Plans for a three-year study to provide water data for future development planning in Blaine County won unanimous support Wednesday from the South Central Health District board of directors.

Dr. Charles Brockway, engineer with the University of Idaho Water Research Center at Kimberly, said in the past 10 years 72 new subdivisions have been platted in Blaine County, all in various stages of completion and all utilizing sub-surface sewage disposal.

"We do not know what the existing septic tank volume is doing to the aquifer and we do not know the future potential," Brockway told the health board.

He said an application to the Environmental Protection Agency for funding the study was turned down last year on the basis of too much research and not enough planning content. He said he intends to apply again, but needs the

support of the various agencies, communities and individuals interested in the Wood River area growth.

Brockway said it would probably require three years to monitor the aquifer. He said monitoring a few subdivisions such as the Cold Springs now newly fully developed with quarter-acre lots, could provide some much needed information.

He said he is working with various city government, health and welfare, health district and county government personnel for support of the study.

The 72 new subdivisions platted since 1970 include about 2,500 housing units and cover some 6,000 acres of land. There will be many more proposed in the near future, he said.

Information compiled from the proposed study, he said, could be applied to other areas as a guide for protecting quality of ground and surface water. It would give responsible agencies some guide to the amount of pollution that could be anticipated from certain density development and be a valuable tool in planning for growth in many other parts of the state, Brockway said.

DHW fee hikes given OK

TWIN FALLS — Inspection and permit fees were approved by the South Central Health District Board Wednesday.

They were proposed by the State Board of Health and the seven Idaho health districts to help make up funding shortages.

Gerald Hurst, district administrator, told the board the new fee schedule represents a partial cost of inspections and is based on what officials feel will help cover some of the funding losses to health districts.

Bierman, district environmentalist, said some of the services are now free while others are

performed at a much lower fee than the proposed new charge.

If adopted by the state board, the fees would be uniform throughout the state, rather than set at different levels in each district as is now the case, Hurst said.

The new fees for sewer permits include \$50 for on-site sewage systems; \$30 for expansion or replacement permits and \$50 for community systems plus \$10 per unit over the first to a maximum of \$200. Hurst said this is for developments where units are joining community system, not for gravity installation.

Some other charges include sub-

division sewage disposal permits and inspections for which there is now no charge, \$100 plus \$5 per lot to a maximum of \$1,000; swimming pool annual permit, \$25; grade-A milk permits of \$100 for the producer, \$25 for the hauler and \$250 for plant inspection; restaurant and food caterers, \$25 annual permit; taverns and bars, \$25; bakery, meat market, poultry and rabbit slaughtering and food processing plants, all \$25 annually.

If a grocery store includes a meat market, bakery or other specialty, the store would pay \$15 basic fee, plus \$10 each for the bakery, meat market, etc. on an annual basis.

FMC still seeking to offer funds to build coal-fired plant in Idaho

By RON ZELLAR
Times-News writer

POCATELLO — An official for FMC Corp. said Wednesday the company is pursuing plans to offer private funding for a coal-fired power plant in southern Idaho.

Meanwhile, Idaho Power Co. Chairman James Bruce said Tuesday the utility would request permission from the Public Utilities Commission by the end of July to study options for its own generating plant.

And PUC President Perry Swisher said he thinks the next thermal plant serving Idaho customers should be built in Idaho.

Bruce said Wednesday he has met with FMC officials only once to discuss their proposal for private funding of a coal-fired plant. However, he did rule out such an arrangement.

FMC owns a phosphorous manufacturing plant in Pocatello and is Idaho Power's largest electricity consumer. FMC resident manager Harvey Herbert in March offered to have the company serve as liaison with a consortium of private investors and power plant builders, including

Decision on Valmy plant topic of talks, Page 2

E.F. Hutton Co. and Bechtel Corp. Herbert said power generated by the plant could be sold cheaper at a savings to all customers, including FMC.

Richard Conroy, FMC materials manager in Pocatello, said Wednesday the company is close to completing a more detailed proposal. He said discussions also were initiated with Utah Power & Light Co. and Bonneville Power Administration, which could participate in the project.

Both Idaho Power and FMC conducted public opinion surveys last fall to assess opposition to a coal plant. Bruce and Conroy confirmed.

Idaho Power polled customers throughout its system and determined there was less opposition than in 1976, said Larry Taylor, Idaho Power public information specialist.

In the utility's Southern Division, which encompasses the Magic Valley, 23 percent favored construction of a generating plant burning low-sulfur coal in their county, if there is a need.

Some 31 percent opposed a plant in their county. Twenty-five percent said it would make no difference to them and 9 percent expressed no opinion.

Conroy said his company polled only in places where a plant might be built and obtained somewhat different results. He said opposition diminished the farther polsters got from Boise, but he declined to name the communities surveyed.

Swisher said Tuesday that he would rather see a coal-fired plant built in Idaho than in Nevada, if one was needed.

He said the number of plant sites in southern Idaho was limited by access to water and air quality considerations, and logically would include sites investigated by Idaho Power in the mid-1970s.

Public opinion surveys conducted by FMC in November, Swisher said, were concentrated near Bliss, north of American Falls, in eastern Lincoln County, and in Bannock and Bear counties of southeastern Idaho.

Bruce said Idaho Power planned to pursue plant sites in Idaho and surrounding states, including prospects for joint ownership with other utilities.

Tax-supported institutions, such as the school district and city and county governments, will be offered discount memberships, but not tax-exemption involved," Dolton said.

Individuals and retired businessmen also will be eligible for lower-priced, individual memberships, Dolton said.

During the press conference, Dolton also said the chamber has been contacted in the last three weeks by four companies considering Twin Falls as a location for a light manufacturing facility. "I'm not going to expound on that," he said, only saying that things are "stirring."

New members goal of chamber manager

TWIN FALLS — Attracting new members will be the top priority for the Twin Falls Chamber of Commerce.

Mike Dolton, in his third week as chamber manager, held a press conference Wednesday to announce some of his plans. They include a membership drive and activities to make chamber membership more attractive.

Out of some 1,100 potential chamber members, the chamber has about 425 members, Dolton said. Asked if he has set a membership target, he said, "100 percent. Why not shoot for the sky?"

He and other chamber members will contact all non-members and ask them to join, Dolton said. Any business that has been thinking of joining the chamber "might as well cave in right now," he said.

The chamber will begin holding regular meetings for all members. The first such meeting will feature Idaho Attorney General Dale Leroy, as speaker, Dolton said. The meeting is tentatively scheduled as a no-host lunch July 8 at the Turf Club.

To help attract members, Dolton said he will make chamber membership free to all new Twin Falls businesses during the year they join

tax-supported institutions, such as the school district and city and county governments, will be offered discount memberships, but not tax-exemption involved," Dolton said.

Individuals and retired businessmen also will be eligible for lower-priced, individual memberships, Dolton said.

During the press conference, Dolton also said the chamber has been contacted in the last three weeks by four companies considering Twin Falls as a location for a light manufacturing facility. "I'm not going to expound on that," he said, only saying that things are "stirring."

Ann Heuston has learned to do simple household chores with the use of one hand

Workshop offers disabled chance to tackle chores

By STEPHANIE SCHOROW
Times-News writer

TWIN FALLS — With one hand behind your back, try to open a jar of pickles. Peel a potato. Fold a sheet. Persons living in a two-handed world may not realize the difficulties even such simple tasks pose for persons partially disabled by a stroke or accident.

Doing odd jobs around the house can be as frustrating to a handicapped person as finding a job outside the home.

Vocational rehabilitation programs provide handicapped persons with job training but, say two home economists, there are no programs in the Magic Valley that teach the handicapped how to perform basic household tasks that can help them gain independence.

So Virginia Mink of Gooding and Alice Anderson of Twin Falls are organizing a home economics workshop for the handicapped and disabled. They hope to offer it at the College of Southern Idaho this fall and are trying to contact potential participants.

The workshop is aimed for the physically handicapped, rather than the visually or hearing impaired, as the two organizers feel programs already exist for these people.

Mink, who has had the use of only one hand since an auto accident 11 years ago, is a former extension home economist who teaches a class on clothing, part-time at the College of Southern Idaho. Presently, she is a home economist coordinator for the state.

Anderson is learning what Mink learned a decade ago: a one-armed person must learn new techniques to perform the same tasks as two-handed people.

They hope the workshop, which they aim to run in six- to eight-week sessions, will provide a forum for handicapped persons to share accumulated knowledge on household hints.

The workshop also will explore ways in which persons confined to wheelchairs can use a kitchen range or other appliances.

Mink remembers how after her return home from the Elks Rehabilitation Center in Boise, she called a handicapped friend to ask in frustration, "How do you cut up a chicken?" Years later, her daughter startled her slightly by asking, "Mother, how do you tie your shoe with one hand?"

Ann Heuston of Twin Falls has been figuring out alternative ways of doing simple tasks for three years, after a stroke during a brain operation left her left side paralyzed. "You have to work things out for yourself," she said.

She remembers when she first used an electric can-opener to open cans of tuna fish and chicken soup, thinking to surprise her daughter by making lunch. "There was tuna fish and chicken soup all over the house," she recalls. But she now knows how to open cans, chop food and take heavy dishes out of the oven.

She learned from Mink the simple technique for folding sheets and towels: laying them on the floor and moving a corner at a time.

Handicapped persons must realize that they cannot move as fast as they once did, she said, but can complete tasks even at a slow pace.

The workshop will explore special equipment for handicapped persons, such as a triangular device that fits over the tops of jars for easier opening. But Anderson and Mink said the class will emphasize items that can be found around the home.

For example, Heuston has a breadboard with two nails hammered through it. Spiking a potato or cucumber on one of the nails steadies it enough for peeling.

Anderson also hopes the workshop will generate positive attitudes among handicapped. Convincing people they can do these tasks may be as important as showing them how to do it, she feels.

"So many times these people go on being isolated. They don't want anyone to see them. These are the people we desperately want to reach," Mink said.

The class will be funded through students' fees and funds from the state's vocational fund, Anderson said. She said the state vocational funding board must first approve a workshop outline.

For more information, call 753-9554, ext. 304.

State police to scrutinize small car role in fatal accidents

By GENE GEORGE
Times-News writer

TWIN FALLS — Smaller cars may be playing a deadly role in Magic Valley traffic accidents.

Lt. Vance Ricks of the Idaho State Police said he was not sure if smaller cars, and a driver's inability to handle them, were to blame for the apparent increase in the number of traffic fatalities. "But I have a sickening suspicion that they are."

Ricks' suspicion was raised after four people were killed in three separate accidents on May 1. They all involved small cars that crashed when the driver overcorrected after he lost control. Ricks then began researching reports on a few of the 26 fatalities that have occurred in the Magic Valley in 1981.

The theme Ricks found in the reports is the driver loses control of the car, overcorrects, and the car flips over.

"As I go through these, it's just car after car. It goes on and on," Ricks said. "It isn't that the drivers have developed a suicidal tendency. It's just that they've got a different ballgame with the smaller cars."

The majority of the 26 fatalities were investigated by the ISP, and Ricks said he would study them carefully to see if he could establish a trend.

Ricks said he was not just concerned with the compact cars, but with the new standard-sized, energy-efficient cars that are smaller than cars in years past.

"A smaller car has a shorter wheel base and smaller wheels and tires," he said. "The weight and weight distribution are different. It won't be as substantial in a violent move."

He also said the rate of fatalities has out-paced 1980. There were 26 fatalities in the Magic Valley area in 1980, and Ricks said that number could be surpassed.

"Normally, the serious fatality period starts in July and

runs through October," he said.

Ricks' study could not be duplicated on a state-wide basis because more information would be needed, according to Sgt. Doug Kramer of the Boise ISP office.

"Without the percentage of smaller cars versus bigger cars, I don't know if you could say it was the fault of the smaller car of just more small cars on the road," Kramer said.

Loretta Carlson of the National Highway Traffic Safety Administration said national-wide studies have shown both factors to be important.

"There is a less significant over-representation of smaller cars in general, but definitely an over-representation of smaller cars in roll-over accidents," Carlson said.

She added, however, that the roll-over accidents accounted for only 5 percent of the total number of fatalities in the United States.

But there is a trend toward smaller cars on the highways, she said. In 1970, 25 percent of the vehicles in use were compact. In 1980, the figure jumped to 40 percent. By 1990, the administration projects almost 60 percent of all vehicles on the road will be compact.

"The increased danger is one reason our agency believes that as long as industry is re-tooling to make the small cars, they should put more material in the sides and on top for protection," Carlson said.

Not much research has been done on driver inability to handle smaller cars, she said. But Texas had been interested enough in the problem to issue a pamphlet on driving small cars.

Ricks said there was not much he could do until he finished his research, and even then there may be no solution.

"You can't change human attitudes or human ability," he said.

Getting by conference topic

By RON ZELLAR
Times-News writer

KETCHUM — A new form of government, "muddling through," has replaced goal setting in America, contends a Montana rancher and conservationist.

The traditional vision of never-ending progress is giving way to fears of an endless series of crises, says Jon Roush, a member of the Nature Conservancy Board of Governors.

In an essay prepared for the fifth conference of the Institute of the American West, scheduled June 20 to July 3 in Ketchum, Roush argues that even those who expect technological advances to save the nation are not, sure how they personally will be affected.

"In the 'Great Depression' we also faced 'serious economic and social problems,'" he says, "but then we were able to rally around a broad array of social goals, based on a consensus about how the economy would be and should work."

"Whether they were the right goals is beside the point. Fifty years later, the New Deal is dead not because of some new conservative mood abroad in the land. It is dead because we can no longer agree on fit goals for our society, and so government no longer has a goal-setting function."

"The best we can do," he adds, "is to take administrative goals, such as balancing the budget or reducing bureaucracy, and elevate them to the status of goals for society."

Political decisions appealing the most today, Roush

claims, are those that say, "Don't entrust decisions to bureaucratic regulators. Leave them to the marketplace. Don't search for consensus beforehand. Wait and see who wins."

The strategy offers pragmatism to solving the nation's problems, he concedes, but it pretends power is not a factor, that small towns and rural states can compete with those more populous.

Factionalism and parochialism will probably rule the 1980s, according to Roush. Westerners are not the only ones revolting against the system. So are eastern cities, Indians, taxpayers and religious fundamentalists.

"Colonies in Revolt" is the conference topic. Special sessions will be devoted to energy development, political power, history of western influence and the West's future.

Speakers include Roush; Sen. James McClure, R-Idaho; Robert Anderson, chairman of Atlantic Richfield Co.; Earl Cranston, president of Samatra Oil Corp.; American Indian historian Vine Deloria; and John De Yonge, executive director of the Alaska Statehood Commission.

Conference sessions will be held in the Alpenrose Hotel from 8:30 a.m. to 10 p.m. throughout the week. They are free of charge and open to the public, space permitting. Copies of a pre-conference tabloid that includes essays by Roush and other participants, as well as registration information and schedules, can be obtained from the Sun Valley Center for the Arts and Humanities, Box 656, Sun Valley, Idaho 83353.

The conference is sponsored by the Sun Valley Center, the National Endowment for the Arts, Levi Strauss Co., and the Idaho Commission on the Arts.

Hansen swim program starting

HANSEN — The Community Progress Committee of Hansen will start a summer swimming program Monday with approval of the Hansen School District board.

The board approved use of a school bus for the project Monday night. Julius Bourn, committee president, said she hopes to have about 30 young people sign up for the two-week program.

The committee will pay for gasoline. Each swimmer will be charged \$18 to cover the half-price charge for the two weeks of beginner swimming

lessons, insurance and transportation costs.

Bourn said the committee is still accepting registration for the program. Any youngster from kindergarten through 16 years of age who lives in the Hansen School District is eligible to participate.

Swimming will be at the Putt and Plunge on Wendell Avenue in Twin Falls. Following the two weeks, the bus will also be available for weekly swimming trips, Bourn said.

The Hansen Community Progress Committee plans a flea market June 27 on U.S. Highway 30, two houses

west of the Hansen Cafe. Bourn said booths are available to interested hobbyists or other individuals. Funds will be used to finance gasoline purchases for the swimming program.

School board members also toured the district's buildings Monday night for an annual inspection and discussed summer maintenance projects.

The next teacher negotiation session is scheduled for Tuesday. Superintendent Richard Smith announced.

Drug possession suspects waive hearing

JEROME — Two men charged with possession of \$35,000 worth of marijuana in Jerome have waived their rights to preliminary hearings.

Julio Gonzalez, 38, of Jerome and Miguel Cazares, 35, no known address, were bound over to 5th District Court Tuesday afternoon on

felony possession charges and for intent to deliver a controlled substance. The men won't submit pleas until their district court arraignments.

No date has been set for the district court hearing and both men remain in

the Jerome County Jail in lieu of \$10,000 bond each.

About 50 pounds of marijuana were found when the two men were arrested by Jerome county, city and state law enforcement officers earlier this month at a Jerome home.

Will the real . . .

Rick Weimer of Twin Falls reflects on how to clean up doors on a cabinet in a home he is helping to build. The prefabricated house Weimer is assembling in a Northwest section of Twin Falls is about half finished.

ated house Weimer is assembling in a Northwest section of Twin Falls is about half finished.

Obituaries

Jesse W. Harrell

JEROME — Jesse W. Harrell, 50, of Jerome, died Tuesday evening at St. Benedict's Hospital after a sudden illness.

Services will be announced by the Howe Funeral Chapel.

Thelma E. Laidlaw

HAILEY — Thelma Elizabeth Laidlaw, 85, of Boise, died Tuesday in a Boise hospital.

She was born Nov. 3, 1895, in Eureka, Utah. She attended schools at Bellevue, California's Academy of Boise in nurses training in St. Alphonsus Hospital. She married William Laidlaw Dec. 11, 1918, at Bellevue. They resided in the "Bellevue" and "Bellevue-area" until

moving to Carey, where they resided from 1936 until Mr. Laidlaw's death in 1950. She moved to Boise in 1953.

Surviving are a son, William Laidlaw of Pasco, Wash.; two daughters, Mrs. Robert (Frances) Jones of Boise and Mrs. Pete (Ellen) Dellos of Pocatello; a sister, Marie Kibbee of Hailey; nine grandchildren; and 19 great-grandchildren.

Rosary will be recited at 7:30 p.m. Friday in the Gibson Funeral Home at Boise; mass will be celebrated at 11 a.m. Saturday in St. Charles Catholic Church at Hailey, and burial will be in the Bellevue Cemetery.

Claude B. Mickelwait

TWIN FALLS — Claude B. Mickelwait, 80, of Washington, D.C.,

formerly a long-time resident of Twin Falls, died Monday in Washington.

He was born at Glenwood, Iowa, in 1891, and moved to Twin Falls with his parents in 1901. He graduated from the Twin Falls High School, the University of Idaho, and Stanford Law School. Mr. Mickelwait was U.S. assistant judge advocate during World War II, and assisted at the Nuremberg trials. He retired as major general.

He was buried Wednesday in Arlington Cemetery.

Miles Marbaugh

HAGERMAN — Miles Marbaugh, 67, of Hagerman, died Wednesday in the Gooding County Memorial Hospital.

Services will be announced by De-mary's Thompson Chapel in Gooding.

Services

TWIN FALLS — Mass for Noel "Britt" Brittain Sr., 61, of Twin Falls, who died Monday, will be celebrated at 10:30 a.m. today in St. Edward's Catholic Church. Burial will be in Sunset Memorial Park under direction of the Reynolds Funeral Chapel. The family suggests donations to the heart fund.

BUHL — Burial for Charles C. Stallings, 72, of Salt Lake City, Utah, formerly of Magic Valley, who died Monday, will be at 2:30 p.m. Friday in the Pleasant View Cemetery at Burley. Services were today in Salt Lake City.

ADRIAN — Graveside services for Adelia Nisley, 60, of Burley, who died Sunday, will be at 10 a.m. today in Pleasant View Cemetery. Friends may call at McCulloch's until service time.

TWIN FALLS — Services for Clinton Dais, 60, of San Francisco, formerly of Twin Falls, will be at 11 a.m. Saturday in Reynolds Funeral Chapel. Burial will be in Sunset Memorial Park. Friends may call at the chapel this evening, Friday, until time of services Saturday.

BURLEY — Mass of the Resurrection for Helen F. Geiger, 61, of Burley, who died Sunday, will be celebrated at 10 a.m. Friday in the St. Therese Little Flower Church of Burley. Burial will be in the Arlington National Cemetery at a later date. Friends may call at the Payne Chapel this afternoon and evening.

BUHL — Services for Dianna-Jean Offish, 37, of Buhl, who died Monday, will be at 10:30 a.m. today in the Hopkins-Buhl Funeral Chapel. Burial will be in the West End Cemetery.

Elvis Maddox of Jerome, and Michelle Koch of Wendell.
Dismissed
Mrs. Doug Morgan and son, Brad Hayes, Della Yokom, William Enyart, and Joe Baker, all of Jerome; Jeremy Hickey of Richfield; "Laberta" Bragg of Gooding; and Rose Clark of Shoshone.

BIRTHS
A son to Mr. and Mrs. John Thompson of Twin Falls.

GOODING COUNTY MEMORIAL
Dismissed
George Bonney, Letha Tester, and Mrs. Cliff Ripley, all of Gooding; Roy Bishop of Wendell; and Erma Jones of Rupert.
A son to Mr. and Mrs. Attilano Crespo of Gooding.

MINIDOKA MEMORIAL
Admitted
Elvira Gonzales, Virginka Jones, Gladys Mulholland, Sandra Reyes, Dora Johnson, and G.J. Bellante, all of Rupert; and Bianca Morris of Paul.
Dismissed
Cesar Leon of Rupert.

CASSIA MEMORIAL
Admitted
Teresa Burton, Deanna Osterhoff, Amy King, Dorothy Gilman, and Carol Ramsey, all of Burley; Martin Hasselstrom of Heyburn; and Mary Warren of Ontario, Ore.
Dismissed
Sally Johnson, Lionel Miller, Shannon West, and Leola Canham, all of Burley; and Larry Adams and Alex Kerbs, both of Rupert.

Court backs EPA over pollution equipment

Power companies discuss ruling

BOISE (UPI) — Idaho Power Co. and Sierra Pacific Power Co. officials are reviewing whether to appeal a court ruling requiring a \$36 million scrubber on the jointly owned Valmy coal-fired plant in Nevada.

Last week, the 9th Circuit Court of Appeals in San Francisco upheld an Environmental Protection Agency requirement that a scrubber be installed on Valmy unit two. The utilities had argued that the unit

should be exempt from EPA anti-pollution regulations because "construction began before regulations became effective in 1978." The EPA argued Idaho Power had not signed a contract, therefore it was not exempt.

James Bruce, Idaho Power chairman and chief executive officer, said officials were unsure whether they would appeal to the U.S. Supreme Court. He said the utilities were concerned that a continued court

battle would mean long delays in the plant's projected starting date of fall 1984. He said a scrubber could delay the start-up by a year.

Officials also are worried about the cost of the scrubber, which could reach \$500 million over the 37-year life of the plant after financing and maintenance charges are included, Idaho Power lawyer Bart Kline said. Those costs would be passed on to ratepayers, Bruce said.

New INEL equipment aids reviews

IDAHO FALLS — Space-age drafting and engineering design reviews are possible with new equipment at the Idaho National Engineering Laboratory.

Computer display terminals similar to those used by airlines for scheduling form the basis for the Computer

Aided Design system. The CAD system, however, has a unique three-dimensional capability and allows magnification of interior as well as exterior features of nuclear reactor system designs.

The magnification feature allows an operator to zoom in on a drawing with

resolution of 1-to-16 million. A map of the United States, for example, could be enlarged to view a section one foot square.

CAD is being used primarily to design and document electrical, piping, vessel, and mechanical systems of nuclear reactors.

A typical work unit consists of a display terminal, a keyboard somewhat like a typewriter, a data tablet with electronic sensors and a stylus, sometimes referred to as an electronic pen.

The keyboard is used to call up a particular design to the screen, to manipulate it as needed in display and to print out a plot of the design. The pen is used to create or modify designs by tracing on the data tablet.

E&G Idaho, a prime contractor at INEL, operates the system at the Department of Energy's Willow Creek Building in Idaho Falls.

Glenns Ferry school patrons facing \$45,099 plant levy

GLENN'S FERRY — Glenns Ferry School District patrons vote June 30 on a proposed \$45,099 special plant facilities levy.

The levy, if approved, will be in effect for a maximum of five years. Funds are sought for repairs and maintenance of the district's buildings and for the purchase of additional buses.

The school board proposes buying four 66-passenger buses with diesel engines and two 20-passenger buses during the five-year levy period.

In addition, funds will allow minor repairs of about two acres of building roofing, most of it 17 years old. Funds also will allow replacement of damaged doors in several buildings. It will add food storage space for hot lunch

programs to allow bidding for larger orders of food at a reduced cost.

The large buses are expected to cost about \$24,000, which would take a majority of the first four years of levy revenues.

District Superintendent James C. Reed said his estimated bus costs will increase about 10 percent each year, making it important to purchase the equipment as soon as possible.

Polls will open June 30 at noon and close at 8 p.m. Polling places include the board room in the Glenns Ferry School, Grace Episcopal Church in Glenns Ferry, the King Hill Grange Hall, Sailor Creek Cafe, Sigert Johnson home at Indian Cove and Hammett Community Church in Hammett.

Kimberly home inspections offered

KIMBERLY — The Kimberly Energy Project is offering free home energy audits for all residents living in the Kimberly School District.

Steve Jennings, project director, said the audits will be made without charge for any home, regardless of income of the residents.

The service includes a complete energy inspection of the home and advice on low cost or no cost techniques that will save energy expenses in the future. Those performing the

audits will offer technical assistance in establishing weatherizing priorities for the home. They will help the homeowner determine if energy conservation improvements are worth the investment and how fast this investment will be paid back.

The project is also designed to offer assistance in arranging installation. Anyone interested in cutting energy costs may contact the Kimberly Energy Project, 300 Main St. N. in Kimberly, or call Jennings at 423-5972.

Idaho Power says heater jackets safe

BOISE — Residential and commercial water heater jackets installed by Idaho Power are not fire hazards, according to a company spokesman.

Contrary to warnings issued recently by Underwriters Laboratories, Inc., insulation jackets installed according to Idaho Power specifications pose no fire hazard, said Cal Bowen, Idaho Power conservation director.

Underwriters Laboratories recommended that the jackets be installed with electrical connections

and side panels covering thermostats left exposed.

Idaho Power installers covered the side panels to increase efficiency. Bowen said tests by the utility's three insulation suppliers indicate heat buildup in the tank is not sufficient to ignite asbestos covering the internal wires.

He said the test showed the insulation would melt, not burn, if subjected to extreme temperatures.

Afraid You're Going Deaf?

Chicago, Ill.—A free offer of special interest to those who have trouble hearing has been announced by Beltone. A non-operating model of one of the smallest Beltone aids of its kind will be given absolutely free to anyone requesting it.

Send for this model, put it on and wear it in the privacy of your own home. While many people with a hearing loss will not receive any significant benefit from any hearing aid, this free model will show you how tiny hearing help can be. It is not a real hearing aid, and it's yours to keep, free. The actual aid weighs less than a fourth of an ounce, and it's all at ear level, in one unit.

These models are free, so we suggest you write for yours now. Again, we repeat: there is no cost, certainly no obligation. Thousands have already been mailed—so write today—to Dept. 05345, Beltone Electronics Corp., 4201 W. Victoria, Chicago, Illinois 60646.

Watson, Nicklaus top list of Open favorites

ARDMORE, Pa. (UPI) — The stifling humidity subsided Wednesday but that didn't stop the enthusiasm from growing as 156 players completed their tuning up for the start of the 111th U.S. Open Championship.

Speculation about who would be favored when play begins Thursday over the tricky, 6,544-yard East course at the Merion Golf Club continued to center on Tom Watson and defending champion Jack Nicklaus, with a lot of support going to Japan's Isao Aoki, the runner-up last year.

There were also the names of Ray Floyd, like Watson a three-time winner on the 1981 PGA tour, consistent Tom Kite, Johnny Miller and Ben Crenshaw.

But the electricity surrounding the stately clubhouse has yet to descend on Bruce Lietzke. This year's third-leading money winner, sounding like he'd rather be back at his Oklahoma home fishing, says he's unenthusiastic and just plain tired.

"I took two weeks off to get married and came back last week, but I couldn't get enthusiastic after playing Westchester," he said Wednesday after a practice round. "I'm playing badly and putting poorly. Maybe that's the reason for my lack of enthusiasm."

"I'm tired. I played a very heavy spring schedule and haven't really had a chance to go on vacation. I love this golf course. But it's only Wednesday. Hopefully, things might happen by the time I tee off tomorrow."

Lietzke has won three tournaments and more than \$246,000 this season. Now that he's talked himself out of winning his first major championship, he was asked who he thought would win. He answered without hesitation.

"I think Tom Watson will win this," he said. "This tournament eliminates the driver and that's Tom's biggest enemy. He'll keep hitting that 1-iron off the tee and once he's within 50 yards of the green he's the best in the world."

It is no secret that Watson is desperately trying to add his first U.S. Open title to his impressive list of accomplishments. He is coming in with momentum, having won three tournaments, including the Masters, in his last eight tournaments.

Watson says he is confident of playing well over the narrow Merion course.

"I feel I can play well here and I feel I have a good attitude going into the tournament," he said. "I never had any fears about not winning the Open. It's just a matter of the right timing and it could be this year."

Temperatures through Wednesday were about 10 degrees cooler than the 90-plus readings Tuesday, while the humidity diminished following passage of a cold front. A steady breeze also refreshed the golfers over the hilly course.

Nicklaus, who lost the playoff to Lee Trevino in the last Open completed here in 1971, is seeking a record fifth Open

title and his 20th major championship. He said he is playing as well as ever from tee to green, but has been having trouble with his putting.

Another player to be watched closely is Kite. The 31-year-old Texan has finished in the top 10 in his last seven tournaments, including a tie for sixth in last week's Westchester Classic, although he skied to 74 on the final day.

"Many feel that if it comes down to the best putter, Aoki could be the man accepting the \$55,000 first-prize check on Sunday evening. If he can keep the ball in play, his putting skill over the slick Merion greens could be a factor."

Miller, a two-time winner this year, will be watched when play begins since he told a group of reporters that Merion was not as tough as everyone said it was.

"I wouldn't be surprised if someone shot 59 or 60," said Miller, who set the Open record with a 63 at Oakmont in 1973.

Twin Falls' Lance Sellers stretches for the bag as Pocatello first baseman Byron Kising awaits a late throw

Twin Falls, Pocatello swap victories

TWIN FALLS — It was Jekyll and Hyde night in Legion play Wednesday.

Pocatello picked up seven unearned runs in the first game to collect a 7-1 victory and then watched its pitching and defense collapse in the second game as the Twin Falls Cowboys walked off with a 10-0 victory behind the two-hit pitching of Dave Korsen.

The nighttime victory snapped a five-game losing spell for the Cowboys and came as some relief to Coach Jim Dawson who saw his charges drop to 0-3 in the district tournament seeding race.

Up to that point, the tournament was the last thing on his mind, however.

Anthony Gonzales completely silenced Twin Falls' offense with a side-arm curve that had the Cowboys chasing it from eye level to into the dirt.

"He's not a bad pitcher," Dawson had to admit afterward. "He had us off-stride. We were way out in front most of the time."

Through six innings the Cowboys had just an infield single by Lance Sellers to show for their efforts.

Meanwhile, Pocatello was pinning the third Legion loss on Lars Hovey. Pocatello picked up one in the second when Byron Kising and Ed Itay had wrongfield singles. A passed ball moved the runners up and one score on a ground out.

In the third, an error opened the

gates and after the next two went out, two hits and a walk scored one run and another scored on an errant throw. Pocatello added three more in the seventh on an error, catcher's interference and singles by Kising and Itay.

Twin Falls' lone run came on a single by Curt Thieman, a walk to Sellers and Shawn Humberger's safely in the final inning.

In the nightcap, Twin Falls moved ahead in the first inning when Gregg Kravitz lived on an error and later scored on Hovey's bunt single. Hovey scored on a Greg Habel safety.

The Cowboys moved out of reach in the third when Gary Krumm broke an 0-12 hitless streak with a

gating triple. Two walks loaded the bases and runs started pouring across on Habel's second hit and a succession of walks and passed balls.

The Cowboys host district-favored Idaho Falls, boasting four college players, in a double-header Saturday afternoon at Frontier Field.

First Game
Pocatello 7, Twin Falls 1
Gonzales and Humberger, Hovey and Thieman. W. Gonzales. L. Hovey. HR — none.

Second Game
Pocatello 10, Twin Falls 0
Kising, Cassi, Kising and Thieman. W. Kising. L. W. Korsen. HR — none.

Brown begins bid for third straight Magic Valley title

TWIN FALLS — Karen Brown of Twin Falls goes after her third straight Times-News Magic Valley Women's Golf Championship this morning.

Brown, sporting a new set of clubs and a four handicap, will be playing her home course and she knows the competition since the field is limited only to residents of Magic Valley.

This year's event shapes up the same as it has for the past couple. Brown will be battling Burley's Lori Vegwert and Twin Falls' Virginia Undheim if form is followed. While there are others in the field who could be in the middle of the fight, most of the attention is centered on those three.

The tournament, which attracted a field of 73, will have prizes and (tee-off times Thursday and conclude with a shotgun start at 8:30 p.m. Friday. The traditional post-tournament luncheon and awards presentation will follow.

Brown and Vegwert have been looking horns a lot over the past couple of years and usually Brown has come out on top by a stroke or two.

Their last confrontation came at the Gate City Tournament in Pocatello where Brown rallied to win the final nine holes to overcome Vegwert and win by a couple of shots.

While there is rivalry between the two, there is no animosity, evidenced Tuesday when they played a practice round at Twin Falls Municipal.

Brown is making a move that most would consider imprudent, electing to

go with a new set of clubs after just two days of practice with them.

"I like them and I seem to hit the ball further with them," Brown said.

"I hit practice balls with them this morning and I'm playing with them this afternoon. I'll get in another round with them tomorrow. Besides, I wasn't hitting my old ones that well."

Brown said the key to her title hopes probably will be the new irons.

"I have to hit the greens because I'm not chipping very well right now," she said. The extra length of the new irons is another adjustment she'll have to make rapidly to make her "keys" come out.

Vegwert, a member of the Weber State golf team, doesn't believe there's a lot wrong with her game at the present time.

"If I can get up and down during the tournament like I did today on the front nine of the practice round I should be okay," Vegwert said. "I must have had something like only 11 putts."

Undheim has won the Magic Valley more than anyone in history and will be seeking her third crown. She will have the advantage of playing on the home course. Those who watched her in the Gate City said she was chipping and putting well.

The championship fight is strong with Denise Sontog, a teammate of Vegwert at Weber State who is spending the summer in Burley, adding a new face. She had a 35 during a practice round earlier in the week.

Frank defends Rupert Amateur golf crown

RUPERT — If there's a new Rupert Amateur champion this weekend, one of the least surprised will be the defending titlist Tracy Frank of Twin Falls.

It's not that Frank is playing badly. But he "feels" there's a sharp edge on his game right now.

The tournament will be played Saturday and Sunday at the Rupert Country Club and host Professional-Jones said he probably would limit the field to about 100 players on the nine-hole layout. Several openings were still available Tuesday evening.

Frank won last year's title handily. But he says "there are a lot of players who are capable of winning it. I think Mike (Hambin of Twin Falls) and Glenn (Blakeley of Burley) are playing pretty well right now and they're always good competitors. But there are several others besides them who could win it and I don't know all the players coming to the tournament."

"My game's all right. Maybe I'd better say just fair," Frank continued. "I just haven't been driving well. I've been hitting my irons real

good — but I'm hitting them from the rough all the time."

Frank says he's reassessed his thinking about the Rupert course somewhat after last year.

"I thought last year driving the ball in the fairway was the key. But I didn't know if I hit a fairway the whole tournament. I think the big thing is to keep the ball out from under AI's forest-of-pine trees," Frank said of host Professional AJ Jones' ample tree forest.

"But I guess it's about like all the other courses in Magic Valley. You have to chip and putt well to score well," Frank said.

Jones said the tournament will have its usual format. The field will be allowed to play in foursomes of its choosing Saturday as a matter of convenience. Tee-off times and pairings will be assigned for Sunday's concluding round.

Jones said the merchandise payoff will be gross-only in the championship flight, gross and net in the first and second flights and net only in the third flight.

Baseball talks still stalemated

Mediator orders owners, players to make new proposals

NEW YORK (UPI) — Without so much as meeting, baseball players and negotiators for major league owners Wednesday broke off bargaining talks and a federal mediator ordered both sides to formulate new positions on the unresolved issue of free agent compensation.

Federal mediator Kenneth Moffett, obviously disappointed that the two-hour session failed even to get the two sides to bargain with each other, called for a one-day break in the talks. The next meeting is scheduled for Friday at 3 p.m. EDT.

"After shuffling back and forth for several hours," said Moffett, "I suggested to both sides that it would serve no purpose to get together, since neither side had any new proposals."

"I felt that if we did get together, that the already deadlocked positions would possibly deteriorate into a worse situation."

Moffett said both the players and owners should use the day off to rethink their positions on the compensation issue, which has forced the six-day strike and already canceled 76 games.

"Nothing really happened today," said Mark Belanger, the player representative of the Baltimore Orioles. "They (the owners) had no news. Neither side had anything to say."

Ray Grebey, the owners' chief negotiator, called the talks "serious but unproductive." But he added, "I think there is a tremendous sense of urgency (to settle the strike). We made last-minute efforts to settle last week and they were rejected."

Attorney Don Fehr, a lawyer for the Players Association, said the players already have a legitimate proposal on the table.

"We feel it is necessary for the owners to come forward with something," Fehr said. "The purpose (of the break) is to think and reflect on the situation and see if there's anything you can do. But I would be fooling you if I didn't say most of that reflecting should be done on the other side."

Meanwhile, player spokesman Bob Boone of the Philadelphia Phillies also said Wednesday he was not anticipating a breakthrough in the talks.

"We go into every meeting with the hope of something positive happening," Boone said. "But the talks certainly haven't brought out much positive yet."

Other players present were Rusty Staub of the New York Mets, Steve Rogers of Montreal and Tom Seaver of Cincinnati.

The owners have left the bargaining to Grebey and the presidents of the National and American Leagues, Chub Feeney and Lee MacPhail.

While the players and owners were camped on the 17th floor of the midtown Manhattan hotel, the agent for New York Yankees' pitcher Ron Guidry presented his own "middle-of-the-road" proposal to end the six-day walkout.

Attorney John Schneider, who represents Guidry, said he already has delivered his plan to the Players Association and to Yankees owner George Steinbrenner.

Under Schneider's plan, a club losing a ranking free agent would be allowed to bargain for compensation with the team signing the free agent. If the two clubs could not agree on compensation within one week, the club that lost

the player would receive a certain amount of cash from a free agent fund.

Schneider said the cash award could be as high as \$1 million. If the free agent was a top star, he said smaller amounts would be transferred in the case of lesser free agents. As a "penalty" for the two teams failing to agree on compensation, both clubs would lose their No. 1 choice in the next amateur free agent draft.

Schneider said teams signing non-ranking free agents would only have to surrender an amateur draft choice to the other club.

"The key (to the proposal) is that player compensation is voluntary," Schneider said. "And if (the teams) are unable to agree on that player, the losing club gets sufficient funds to either get involved in the free agent market itself or to develop its farm system."

Neither Grebey nor Fehr said they had seen Schneider's proposal. Fehr said his office was reviewing it.

The negotiations had resumed Tuesday after a three-day break, but there has been "zero" progress since then, Moffett said.

Two young Boy Scouts learn the basics of handling a canoe on a pond at Camp Roach. A Boy Scout guidebook details several area canoe trips.

Canoes ideal for Idaho's waters

By RON ZELLAR
Times-News writer

TWIN FALLS — Canoe enthusiasts looking for a place to paddle can take a page from the Boy Scouts' "High Adventure Guidebook."

In a state famous for its rivers, canoes are a natural ticket to scenic beauty and solitude. More maneuverable than a raft or motorboat, they open new paths in the slow-moving streams that are common in southern Idaho.

Yet little published information is available on canoe trails. The nearest spots in "River Runner's Guide to Idaho," published by the state Department of Parks and Recreation, are near Kuna and north of Idaho Falls. As a result, Magic Valley canoe owners often confine their weekend outings to area lakes and reservoirs.

The Boy Scout guidebook, published by the Snake River Area Council, lists nine trips inside or bordering Twin Falls, Gooding and Blaine counties.

Lloyd Baisch, a Twin Falls scout leader who helped write the guide, said avid canoeists are limited only by their imagination. He cautioned, however, that several of the nine trails listed are no place for beginners and all new routes should be scouted in advance.

Upper Salmon Falls Creek, a 20- to 26-mile course that begins three miles south of Jackpot and ends at Salmon Falls Reservoir, received an "advanced" rating in the manual. The creek winds its way through scenic bluffs and willow thickets, requiring

travelers to change course frequently to avoid the willows and shallow water.

Bill Loughmiller of Hollister, who has helped lead Scouting expeditions on Upper Salmon Falls Creek, said he has made the trip only at high water in May or June, and flows this spring appeared too low even to attempt it.

(Two Times-News reporters who floated the stretch two weeks ago in a rubber raft ended up packing home a punctured raft from a point five miles short of their destination.)

Baisch said he has seen canoes pinned against rocks in the canyon that required a block and tackle to remove.

An excellent stretch for beginners is a portion of Salmon Falls Creek just upstream from Balanced Rock State Park, he said. There the creek provides a feel for moderate currents and steering requirements. Canoeists can proceed three miles without portaging, with additional opportunities of a half mile or more by portaging around obstacles.

Paddling upstream first is a good way to assess problems, advises a Red Cross guide to canoeing. Baisch says the book should be required reading for anyone who attempts the sport without enrolling in a safety instruction course first.

The Red Cross also advises:

- Always wear a Coast Guard-approved flotation vest or jacket.
- Respect the river. Know classifications and learn what they mean. Never canoe on flooded rivers. Learn river paddling skills before venturing from slack water.
- On rough water, always kneel. Kneeling

concentrates the bulk of your weight toward the bottom of the canoe, lowering the center of gravity.

For extra precaution against accidents, the Snake River Council, beginning next April, will require that Boy Scouts who rent the council's 12 canoes complete a course by Red Cross certified instructors.

Canoe safety courses sponsored by the Boy Scouts are held twice a year and are open to the public, said Michael Devitt, council executive.

Portions of the classes were held in the Twin Falls YFCA, which is now struggling to keep its financial head above water. Devitt said classes next spring will be outdoors, probably at T.E. Roach Boy Scout camp south of Wendell.

Devitt added his own note of caution to canoeists seeking new trails. He said two Scouts unfamiliar with the Snake River below the Clear Lakes bridge attempted to canoe down to the Roach camp and nearly drowned in Kanaka rapids.

The High Adventures Guidebook lists two proven trails for novices on the Snake, one upstream from Shoshone Falls to the Devil's Corral Inlet and the other from the Twin Falls wastewater treatment plant to Shoshone Falls with a portage around Pillar Falls. Both, however, are advised only during low water.

For more experienced canoeists, a trip from Bellevue to Magic Reservoir is rated "intermediate." It requires some judgement to avoid obstacles that change from year to year through flooding.

The guidebook is available for 75 cents from the council headquarters, 3188 F. Falls Ave.

The 32-page booklet also includes tips on canoe and camping equipment, as well as a brief list of area hiking and backpacking trails.

Buying a canoe also requires knowledge of the sport, Baisch said. Some models, with less sharply defined keels, are designed for river running, where sideways movement is frequently needed. Such boats tend to be unstable in waves however.

"The biggest mistake a family of four can make is to try to crowd all four into one canoe," he said. At most, canoes are designed to hold two adults and a child. No more than three. The extra weight causes them to ride too low in the water.

Baisch said he would avoid anything shorter than a 16-foot model unless it would be used primarily by one person. And he recommended wide, light paddles for maximum maneuverability.

Even experienced canoeists should check with agencies that administer waterways before taking a trip in unfamiliar waters or during seasons of changing flow, he said.

Snake River flows change in summer according to irrigation demands. The federal Bureau of Reclamation office in Burley schedules flows and can often predict conditions a week in advance.

Other agencies to consult include the U.S. Forest Service office in Ketchum, The Sawtooth National Recreation Area office in Stanley, and Bureau of Land Management offices in Shoshone and Burley regarding the Wood River and Salmon Falls Creek.

Sven

Seeking nature's richness

Special to the Times-News

I received a call last week. "Sven, are you against progress?"

Answer: I want to be rich. Not rich in dollars but rich in the ability to enjoy clean air and water, to roam Idaho and share it with the fish and animals that were here long before me. I want to feel like it's all mine if only for a weekend or a few days of vacation. That's rich, and it is the only kind of rich most of us will ever know.

Fishing vacation

Spent a week just roaming around. Wee, the gas prices!

Fish Creek Reservoir was excellent. I tried my new boat with daughter and son-in-law and in 1½ hours we had our limits. Heck, caught fish on lures that were meant to catch fishermen, not fish.

A sleeper lake was Lava Lake. This lake has some junkies, and I talked to two fellas from Arco who fly fish with float tubes and they reported several broken leaders. Too small for a boat, too weedy for bank fishing, just right for rubber raft or float tubes and fly fishing.

Success was also noted at Magic Reservoir for the boat fishermen.

Silver Creek was producing well. Did not see any junkies, but had several checks of six fish from 12 to 16 inches.

Mormon Reservoir was giving up some nice perch. Camas Reservoir fishermen report some excellent catches.

The sad report came from Roserworth Reservoir with several skunkings reported. Must note that the reservoir was not planted and will, according to officials, be drained for dam repair.

Basque festival

Attended a Basque festival this past week in Nevada and had a grand time. Of special interest to Twin Falls folk would be the weight lifting. The interesting thing was a black marble ball weighing 280 pounds made by a Twin Falls company.

Had a chance to talk fishing with many northern Nevada residents, and they report excellent trout fishing at Wildhorse Reservoir, 60 miles from Elko. Ruby marshes were another hot spot for bass the past few weeks.

A Basque thought for today: "If you wish to be happy for an hour, get intoxicated; if you wish to be happy for three days, get married; if you wish to be happy for eight days, kill a pig and eat it; if you wish to be happy forever, learn to fish."

Sven is an avid Twin Falls fisherman who writes a weekly column for the Outdoors page.

CAP rewards reach \$1,000

BOISE — A reward of \$1,000 is waiting for CAP caller 707-0711 whose information led to an arrest for illegal possession of a big game.

The caller needs only to dial 1-800-632-5999, the 24-hour toll-free number maintained by CAP — Citizens Against Poaching — and give his or her proper code number to claim the money, according to Dale Bird, the Department of Fish and Game coordinator for the program.

With the latest reward, CAP has paid \$1,000 to individuals who have reported suspected fish and game law violations and subsequent investigations resulted in an arrest.

All donations to CAP are tax deductible. A contribution of \$10 or more buys a membership in CAP and it can be addressed to Citizens Against Poaching, P.O. Box 7533, Boise, ID 83707.

Drought conditions in Canada rough on ducks, geese

CHICAGO — Wild ducks and geese returning to Canada's breeding grounds are encountering more of the harsh conditions they suffered during 1990's record drought.

"The water situation across Canada's prairie provinces looks to be about as bad as it was last spring," said Duck Unlimited Executive Vice President Dale E. Whitesell. "Prairie dust storms are frequent and, in Saskatchewan, have even blown topsill into three-foot drifts."

Whitesell explained the root of the

problem was lack of snowfall this past winter. The resulting meager melting and runoff amounted to a trickle, not nearly enough to adequately replenish marshland water levels. What little runoff did come was quickly blotted by the dry earth.

"The mallards, pintails and Canada geese have already arrived on the prairies but we don't expect many to stick around in these conditions," Whitesell said. "And like last year, large numbers of birds probably will overfly the parched prairies, opting

for better conditions on the bigger northern marshes."

DU already has plans to help avoid a repeat performance of last year's drought devastation which, according to the Canadian Wildlife Service, reduced fall migration in the Central Flyway by 20 percent from 1979 numbers. Whitesell explained that DU Canada provincial biologists and managers have recently implemented a contingency plan to take on drought demands.

"The water levels on our projects are periodically drawn down to

permit more vegetation growth. Since water is now so scarce, our plan calls for indefinite cancellation of all planned drawdowns on the prairies."

In addition, DU's contingency plan will check botulism problems which traditionally have been magnified by drought. The problems crop up when low water situations are coupled with high temperatures. These conditions enable bacteria to grow in such profusion they poison the water. The toxins, in turn, make their way into the food chain, killing migratory fowl and other birds.

Whitesell said botulism control efforts will include air surveillance of between 12 and 15 known "hot spots" in the provinces of Manitoba, Alberta and Saskatchewan. Should problems arise, the birds will be hazed from the troubled areas and any carcasses will be removed to stem the spread of disease.

"While DU can't control the weather, we can do the next best thing for waterfowl," Whitesell said. "That is to control water levels to provide suitable breeding habitat and head off problems before they begin."

Fish & Game

By STU MURRELL
Special to The Times-News

Controlled hunt application deadline is June 30

The controlled hunt application deadline is June 30 and the applications have been available at local vendors or regional Fish and Game offices since June 5.

Hunters will find a new procedure since the fees will be required with the application and will be returned to the hunter if they are not successful in the drawing. It is anticipated this change will result in up to a 40 percent reduction in the number of applications and provide a

better opportunity for the serious trophy hunter to draw a permit.

Applicants must have a previously purchased hunting license to apply, since this is one of the three numbers used in the drawing. The other two are the number given the application as it arrives in the state office and your social security number.

Youngsters who will have their 12th birthday after the June 30th deadline are not eligible to apply this year since they cannot legally purchase a hunting license until they are 12. However, Idaho has numerous deer and elk hunts in which a person who is not successful in receiving a

controlled hunt permit can hunt on a general basis.

Applicants should make sure they print all the necessary information carefully on the application, sign their name and double check the correct hunt number before dropping it into the mail. Numerous applications are returned each year because of incorrect information. Applicants check money order or certified check are the only acceptable payment with the application.

The procedure to follow is to decide on which unit you wish to apply and fill in the application accordingly. Read the written description of the unit area to make sure it includes your favorite hunting spots. The Jerome regional

office or your local conservation officers have specific maps showing the unit boundaries if you are not sure about a particular area.

The drawing will be held Aug. 3 at 9 a.m. and successful applicants will be notified within a two-to-three-day period. Ineligible and unsuccessful applicants will have their money returned somewhat later since it takes additional time to process the warrants.

Stu Murrell is the conservation education officer for the Jerome regional office of the Idaho Fish and Game Department.

Briefly in sports

Jenkins snares fourth hole-in-one

TWIN FALLS — Gary Jenkins of Twin Falls picked up the fourth hole-in-one of his golfing career Wednesday afternoon. With Ted Black, Bill Durbin and Jim McCallan looking on, Jenkins holed out on the par three, 143-yard third hole at Canyon Springs Golf Course. He used a nine-iron.

Jerome sets basketball, tennis clinics

JEROME — The Jerome Recreation District will sponsor youth basketball and adult tennis clinics. Jerome High School Coach Pat Hoke will conduct the basketball sessions, slated from 6 to 9 p.m. each Monday and Wednesday night. All junior and senior high school age boys are invited. The tennis clinic, conducted by Merlene Maybury, will be held from 8:30 to 10 p.m. Monday and Wednesday and will run for four weeks.

The tennis clinic is pegged to the intermediate area.

Kush tells Canada of scholarship ills

HAMILTON, Ont. (UPI) — Hamilton Tiger-Cats head coach Frank Kush, one of the winningest coaches in the history of U.S. college football, Wednesday said Canada would be better off to reject a system of athletic scholarships similar to that practiced at most U.S. schools.

"The Canadian Interuniversity Athletic Union approved Tuesday, for the first time in its history, a program of athletic scholarships to become effective this year."

"You are well off not having them (scholarships), because you get involved in the same ills that you have in collegiate football in the United States," Kush said prior to the Tiger-Cats workout at Ivor Wynne Stadium.

"If the ills come from revenue, recognition, and recruiting. They are the three evils of college athletics and that's it."

NBA pushes season back three weeks

NEW YORK (UPI) — The NBA, feeling it can capture the attention of sports fans more easily by starting its season after the World Series ends, Wednesday announced its 1981-82 season would begin Oct. 30.

Major league baseball's championship series normally concludes in the middle of October, and the NBA previously had opened its season in the first week of October.

By pushing the season start back three weeks, the NBA's championship finals will be held on Jan. 19. Highlighting the 10-game slate of openers Oct. 30 will be the first game in the new Brendan Byrne Arena in East Rutherford, N.J., between the New York Knicks and the New Jersey Nets. The Nets have played the last four years at Rutgers University in Piscataway, N.J.

The new arena in the Meadowlands sports complex will seat 20,749 for basketball. The Nets may have to wait until the end of the year to pay off the salaries of million-dollar guard Otis Birdsong and the three No. 1 draft choices they selected in last week's draft.

Oregon will hire full time fundraiser

EUGENE, Ore. (UPI) — Richard Bay, tapped to take over as athletic director at the University of Oregon, said Tuesday he expects to hire a full-time fund-raiser.

Bay, 38, who had fund-raising experience at Michigan, was named to succeed John Calne to head up the financially-troubled UO Athletic Department.

A quarterback at Michigan for three seasons, Bay will take over Aug. 1. He will be paid \$100,000 a year under a three-year contract. "I understand what it is to coach," he said, "but I also have experience in fund-raising. I am told there are untapped sources in Oregon. We fully expect to hire a full-time fund-raiser. We hope to tap those sources with an organized and syndicated effort."

Two players forced from Wimbledon

LONDON (UPI) — Vince Van Patten of the U.S. and India's Ramesh Krishnan have withdrawn from the \$650,000 Wimbledon championships starting Monday because of injury and illness.

Their places will go to two losers from the eliminating competition being held this week. Krishnan, who reached the last 32 of the singles last year, has a stomach muscle injury. Van Patten, Sherman Oaks, Calif., was reported to be ill.

Old Dominion's Dutch center retires

NORFOLK, Va. (UPI) — Bert Kragtwerk, Old Dominion's 6-foot-10, 260-pound sophomore center from The Netherlands, said Tuesday he is retiring from his junior year. ODU officials said Wednesday.

Kragtwerk was the Monarchs' sixth man last season, averaging 3.4 points and 6.3 rebounds per game. Kragtwerk has signed a professional contract with a Dutch team and has secured a position with Management Assistance Inc. of Holland.

"This is a great opportunity for Bert, one which will allow him both to begin his working career and also continue to play top-flight basketball," said ODU coach Paul Webb. "It was simply too good for him to turn down."

Yankees sign players from June draft

NEW YORK (UPI) — The New York Yankees Wednesday announced the signings of six players, including third baseman Shane O'Shea, drafted in last week's free agent draft.

The Yankees have signed 12 of the 45 players they selected. O'Shea, a native of Northport, N.Y., was New York's fifth-round pick in the secondary phase of the annual summer draft. A switch-hitter from River Community College in Plantersville, the 19-year-old will report to the Yankees' rookie league club in Bradenton, Fla.

Also signed were catcher John Hughes, Logan Fasley and Trent Ferrin from the College of Southern Idaho.

Missouri quarterback to try baseball

SEATTLE (UPI) — Former University of Missouri quarterback Phil Bradley, who was drafted last week by the Seattle Mariners, plans to pursue a professional baseball career. It was reported Wednesday.

Bradley, who set a Big Eight Conference career total offense record with more than 10,000 yards, wasn't drafted by any team during the NFL draft this year. The British Columbia Lions held the football rights to Bradley in Canada.

The Seattle Post-Intelligencer reported that sources close to Bradley said the 6-foot-2, 180-pounder plans to play baseball. Bradley was the Mariners' third-round draft choice in last week's draft.

Bradley played baseball for Missouri during his final three seasons at the school. His .457 batting average last season ranked second in the NCAA as Bradley helped Missouri to the Big Eight regular season baseball title.

"He is a great athlete," said Hal Keller, director of player development for the Mariners. "He is a good defensive player, an outstanding speedster. As far as going and getting a ball, he could play in the big leagues for some teams today."

Flick to share pro pay with charities

WASHINGTON (UPI) — Not only Tom Flick, but the University of Washington, Interlake High School in Bellevue, Wash., and a charity in the Washington area will benefit from Flick's first pro football contract.

Flick, the Washington Redskins' fourth-round draft pick, signed his contract Wednesday and designated part of the funds for charity. The terms of the contract were not revealed, a club policy.

Flick is establishing a scholarship fund at Interlake, where he attended high school in the Seattle suburbs, and will repay the Huskies' athletic fund for the amount of his scholarship. In addition, a Washington area charity will receive \$100 for each touchdown pass he throws with the Redskins matching the amount.

Since he doesn't figure to dislodge veteran Joe Theismann as the starting quarterback, Flick will make sure a minimum of \$1,000 goes to the as yet undetermined charity.

"What else could I do?" Flick asked rhetorically. "I had a great time at Washington. It helped in getting summer jobs, and I met a lot of great friends. The people at my high school were great to me."

NOTICE OF TRUSTEE'S SALE
On Wednesday, the 28th day of October, 1981, at the hour of 10:00 o'clock A.M., of said day, in the lobby of the office of Title Fact, Inc., located at 180 Fourth Avenue, N., Twin Falls, Idaho 83301, Lawyer's Title of Idaho, as Trustee, will sell at public auction, to the highest bidder, for cash, in lawful money of the United States, all said real property situated in the County of Twin Falls, State of Idaho and described as follows, to-wit:

Lot 29, Block 2 of Skyline Subdivision, Twin Falls, County, Idaho according to the official plat thereof recorded in Book 9 of Plats, page 25, records of Twin Falls County, Idaho.

Said sale will be made without warranty of title, possession or encumbrances to satisfy the obligation secured by and pursuant to the power of sale conferred in the Deed of Trust executed by Orrle Kay Baysinger and Ruth D. Baysinger, husband and

wife, Grantors to Lawyer's Title of Idaho whose address is 4819 Emerald, Boise, Idaho, as successor Trustee to Title and Trust Company, for the benefit and security of Sherwood & Roberts, Inc., as Beneficiary under that Deed of Trust dated June 16, 1979 and recorded July 2, 1979 as instrument number 782125, Mortgage Records of Twin Falls County, Idaho.

The default for which this sale is to be made is the failure to pay when due, regular monthly payments due December 1, 1980 and every month thereafter through and including June 1, 1981 of \$390.00 each, together with late charge in the amount of \$14.15 for each of said months for a total default at this time of \$2,828.05.

By reason of said default, the Beneficiary has exercised its option in the Promissory Note to declare the entire indebtedness and accrued interest, attorneys fees and other costs or expenses associated with this foreclosure to be due and payable. The principal balance owing as of this date is \$39,566.00 plus accrued

interest at the rate of 10 percent per annum from December 1, 1980 plus late charges of \$14.15 per month from December 1, 1980, attorneys fees and any other costs or expenses associated with this foreclosure as provided by the Deed of Trust, the Promissory Note or Idaho Law.

NOTICE OF TRUSTEE'S SALE
On Thursday, the 24th day of September, 1981 at the hour of 10:00 o'clock A.M., of said day, in the lobby of the Office of First American Title Company, 1136 Blue Lakes Blvd., Twin Falls, Idaho in County of Twin Falls, State of Idaho, First American Title Company of Idaho, Inc., an Idaho Corporation, as successor trustee, will sell at public auction, to the highest bidder, for cash, in lawful money of the United States, all payable at the time of sale, the following de-

scribed real property, situated in the County of Twin Falls State of Idaho, and described as follows, to-wit:

Township Range 17, East of the Boise Meridian, Twin Falls County, Idaho Section 1 That portion of the E1/2NW1/4NE1/4, described as follows: Beginning at a point 219 feet South of the Northwest corner of E1/2NW1/4NE1/4, of said Section 22; THENCE East parallel with the North line of said Section a distance of 117.7 feet; THENCE South a distance of 123 feet; THENCE West parallel with the North line of said Section a distance of 117.7 feet; THENCE North along the West line of said E1/2NW1/4NE1/4 of said Section a distance of 123 feet to the Point of Beginning.

Said sale will be made without warranty of title, possession or encumbrances to satisfy the obligation secured by and pursuant to the

power of sale conferred in the deed of trust executed by M.J. MONTGOMERY and TERRY J. MONTGOMERY, husband and wife grantors, to FIRST AMERICAN TITLE COMPANY OF IDAHO INC., as successor trustee, for the benefit and security of MARGARET LOUISE REEVES, as her sole and separate property recorded April 8, 1980 as instrument No. 780537 Mortgage records of Twin Falls County, Idaho.

The default for which this sale is to be made is being the failure to pay when due, monthly installments under Deed of Trust Note dated April 4, 1980, in the amount of \$170.32 each for the months of March and April, 1981. The delinquent payment is now due, plus any other costs or expenses associated with this foreclosure. The accrued interest is at the rate of 11 per cent per annum from March 4, 1981, and the balance owing as of this date is \$20,390.92.

Said deed of trust is DATED May 18, 1981.

IN THE DISTRICT COURT OF THE FIFTH JUDICIAL DISTRICT OF THE STATE OF IDAHO, IN AND FOR THE COUNTY OF TWIN FALLS

In the Matter of the Application of CARLA JEAN MOORE, For Change of Name.

Case No. 2348

NOTICE OF HEARING
A petition by CARLA JEAN MOORE, born June 8, 1951, at Twin Falls, Idaho, now residing at Twin Falls, Idaho, proposing a change in name to CARLA JEAN AGUIRRE, has been filed in the above entitled Court, the reason for the change in name being that the petitioner's step-father last name is AGUIRRE and since the birth of the petitioner he has been her father to all intents and purposes. That your petitioner's actual father and her mother were divorced during the year she was born and she has seen him on only isolated occasions since her birth. That her actual father has been indicated an interest in her and she desires to have her last name changed to a name that more fully reflects her life experience.

The name and address of the petitioner's father is: JOHN STEVEN MOORE 4126 S. Third, Apt. #1 Everett, WA 98203.

The name and address of petitioner's nearest living relative is: MARVA AGUIRRE Route #8 Twin Falls, ID 83301.

Such petition will be heard on Wednesday, the 8th day of July, 1981, at 9:30 o'clock a.m. at the Magistrate Division of the District Court, and objections may be filed by any person who can, in such objections, show to the Court a good reason against such a change in name.

WITNESS My hand and seal of said District Court this 27th day of May, 1981.

By Oswald Jacoby and Alan Sontag

South looks over dummy happily. He sees that if either

the diamond ace or spade ace is in front of the king queen he can establish an extra winner for a club discard. Failing that, he can still get off with one club loser with any luck at all in that suit.

Obviously, he should go after spades or diamonds as a starter. Which one? You readers can see that the spade ace is right and left. If South takes his ace and lead a club, From a result standpoint, South must attack spades. From the standpoint of good bridge, he should also attack spades.

Why? Because if the spade ace is wrong, South has time to try diamonds and finally to fall back on clubs if diamonds are wrong also.

There is a further problem in play. Should South draw trumps? No. He wins the first heart with dummy's nine and leads a spade. East ducks and South takes his king. Back to dummy's jack of trumps to lead a second spade. East takes his ace, but now South can discard one of dummy's clubs on the spade queen and be sure of his contract.
